radio communication, you might as well have. At least there would have
been something usable left behind when you were done.

> Gotta give a big hand of applause to the
> mechanical engineers at Teletype Corp.!
> The basic Model 15 TTY could clank away...(SNIP)

Lennie...I thought you insisted that this was a radio policy
newsgroup.

Now you and PuppetBoy spend two days talking about 1940's and 50's
era teletype gear...?!?!

What's up with that? Can't adhere to your own rhetoric...?!?!

> >> But, we've got all those religious Believers who

> possible by "CW."

Morse Code is and will remain for some time to come a valuable
and viable means of basic, unicersal communications.

No amount of pontification by ex radio technicians or mild manner
ex Air Force weathermen posing as thier sidekicks can change that.

> U.S. ham radio be Living Museum of old
> radio skills! Jimmie Who be curator?

Who's Jimmie? Cousin of your's, Lennie? I know you can't be
talking about Jim Miccolis. And I know this because YOU have stated
that you don't speak disrespectfully or use diminutives when treated
likewise.

And we know YOU "don't lie"...Or do you?

Putz.

Why would I?

> "Sorry Kelly, USCG LORAN >>>IS<<< Amateur Radio!"

It's a darned shame that you can't handle more than one concept in
a 12 calendar month period, Brain. But then it does makes it a lot
easier to keep you on a leash.

Heel, boy.

>
> Not a problem. You ARE nuts...

And you're a humiliation to yourself and your family name.

All pathological liars are. The ironic thing is that most
pathological liars WANT to get caught. It's a subconcious effort to
get help.

Too bad Mrs. Lennie, the correspondence course shrink, doesn't
read the NG. Of course she would have to WANT to help. By letting you
act a fool all the time she can keep you under thumb.

(I've often considered that Lennie probably is a domestic abuse
victim whose only source of venting IS this NG...and we are all just
victims of his redirected frustrations. His patterns of postings and
methodology of belittling and denigrating are typical of an abused
person)

> > You're a humiliation. To yourself. To your wife. To your
> family

Hey Lennie...You and your sidekick need to get your rants worked
out so you don't at once claim others are "fixated" on male genitalia,
and then you go right ahead and do that very thing...

Just makes making a fool out of you even that more easy.

> Nonebody else needing such proof.

I do. Your volumes of lies and mistruths in this forum tend to
lend great doubt on the validity of ANYthing that you have "authored".
If you expect ANYone to believe the validity of them, you need to prove
it.

You've so discreditied yourself as to make ANYthing you say
doubtable.

Your "word" is worthless.

> Never been fired from any job for "falsifying" things.
> [not like a purchasing department job...]

You worked in a Purchasing Department too...???

I never falsified any documents, though. Why did you find it
necessary to...????

> > I say that judging by your frequent lies and deceitful
behaviour

> Wow! TRIPLE does of uppers!

Nope...It's just that the pattern of YOUR behaviour is well known.
You're not a trustworthy person.

> > We'll just narrow it down to those items published in Amateur
> >Radio realted periodicals.
>
> No problem. All 22 years of Ham Radio Magazine are
> available on three CDs for $150 the set (shipping charges
> extra) from ARRL or CQ Bookstore.

You're not in the entire 22 years of Ham Radio.

And you still haven't produced any references to projects that
your "papers" contributed materially to, Lennie.

Come to think of it...Had Jim Fisk used the money he paid you for
your "work" on a swimsuit edition instead, HR might still be in active
publication today...

At least then the subscribers would ahve had something a bit more
useful.

> > As for your "friends"...well...Like usually follows like, and I

I think that one major reason some people are so
against the code test is that it isn't something
you can learn by reading a book or watching a
video.

> >> Tradition? That's a
> >> weak reason, but it seems to be the only one. Sure, 40% of HF may

Let's boil it down to basics:

Your argument is that nobody should have to learn Knowledge A in order
to
do Activity B if Activity B can be done without Knowledge A.

In this case

Knowledge A = basic Morse skill, Activity B = amateur radio HF phone

The problem is that if you accept that reasoning, you must logically a
accept a lot more:

Knowledge A = radio theory, Activity B = operate modern manufactured
rig

Knowledge A = limits of Band X, Activity B = operate on Band Y

Knowledge A = SSB theory, Activity B = operate Morse

Knowledge A = high power RF exposure safety, Activity B = operate QRP

and much more.

Despite all the colorful false analogies with buggywhips and such, no
one has been able to show why the above arguments don't follow.

In fact, the NCVEC proposal takes it to that level, not only dumping
code testing but further watering down the *written* requirements to
an almost absurd level.

Do you think NCVEC has the right idea?

Suppose someone proposed to eliminate the Extra and Advanced class
licenses, give those hams Generals - and give all Generals full
privileges.

And suppose the proposal argued that since a General was qualified to use
all modes, bands and power levels allowed to Advanceds and Extras, there
was no need for the two higher level license classes.

How would you counter that argument?

I think that's probably about where I was when I came here in '89, so I could just say 19 years. I suppose you would have to knock something off that as I had been stuck at that level for a while!

Just the same way I did before when discussing it with you, Jim (shades of deja vu?). The Morse test is a skill test, and all the others are theory tests. I have no objection to theory tests on all aspects of the hobby, including Morse code. That would be a balanced approach.

> - Mike KB3EIA -

Did not mean to imply that truckers are never to blame. I too have had truckers run right up on my bumper at excessive speeds and then honk to attempt to bully the other drivers to move. Just noting that I have all too often observed drivers in cars behaving like idiots around trucks and then blaming the trucker.

I actually saw a case where a woman was circling a truck and causing a hazard to everyone on the road because she was bound and determined to find the phone number on the guys truck so she could turn him in. All that he had done was make a left turn onto the street that I was traveling on. Naturally, something that big is going to impede traffic slightly no matter what he does. He did NOT cut in front of any of us. We all had sufficient time to see him and adjust our speeds. This woman apparently thought he ought to wait until there was no one whatsoever on the road before entering it. Well he'd have been sitting there until he died of old age as that street is NEVER clear regardless of the weather or time of day. After this truck got on the road, the woman first sped up and pulled in front of him and looked in her mirror. When she couldn't find a phone number, she pulled over into my lane and braked and slowed down to examine the side of the truck. She paid no attention to the cars already in the lane and created a major hazard. The car ahead of me had to brake severely to keep from hitting her. When she found no phone number, she braked even more causing a major slowdown on a busy street and pulled in behind the truck to try to find it.

>beaten.

"Beaten?" :-)

Tsk, haven't bothered to take one, impossible to know if I
would be "beaten" or "triumph in exhiliration" or other
imaginary visions you have. :-)

>No candidate for the Amateur Extra can or must take the morse code
test
>like I had to.

NOBODY could. :-)

You are the Magnificent One, the Mighty Conqueror
exhulting in the glory of your Accomplishment!

>I just can't find it in me.

Get an X-Ray. That would help locate where it is
inside you.

[please don't fog the film like you did last time...]

>You needn't show any dedication at all, Len.

No?!?!?

You heap big PCTA extras ought to get your act together.

>NO OTHER MODE REQUIRES ANY PARTICULAR SKILL.

Tsk. Heap big Dave says so...it "must" be true!

>Here's a talisman for you, Leonard.

Here's a salute for you, David, with one finger... :-)

>You however, have passed no radio amateur
>exams of any kind.

Well then, by Heilian logic, the Vast, Complex, Difficult
radio amateur questions must have me "beaten!" :-)

>That's the same way I learned typing, Len. Similar methods can be
used
>in learning morse code.

Why should I "have" to learn morse code?

I didn't need any morsemanship skill a half century
ago to operate lots of radio transmitters on HF.

I didn't need any morsemanship skill from 46 years
ago until the present to operate radio transmitters
on HF.

>If you'd applied those methods to developing
>morse skills you'd have had a ham ticket for decades.

Why must *I* do those things?

The FCC isn't that concerned about "my" development.

Why do you fabricate all this "personal" nonsense?

Such doesn't apply to pointing out that the morse code
test for an amateur radio license is far past its
usefulness. Even the FCC agreed to that in 1990 in
a public statement.

Besides, NO ONE could possibly go through that
extremely tough code test done by Heap big Dave.
NO ONE. :-)

>Sitting around
>here grousing hasn't done much toward that end, has it?

In your case, that IS true!

Now, I'll repeat my question: Why are you fabricating
a false condition and why are you making this some
kind of "personal vendetta" for yourself?

Relax. Have a cashew. They came from Guinea-Bisseau.

Chew on that. :-)

I thought it was a malfunction. I would have called tech control and
logged it out if it persisted. But after freezing up, it would behave
normally. Til the next time. I never knew that's what was happening.
Bill Gates would call it an "unadvertised" feature. I never knew how
fast I was actually typing, either.

Thanks. Mystery solved. The only actual training we ever got on the
tty's was how to change paper and how to change tape. Got tired of
cutting tape in the blind and figured out how to change the tape ink
ribbon myself. Later I just learned how to read the holes.

Ding, ding, ding.

I worked on "sage weather dids" which would show current observation
and the 1 and 2 hour forecast for each recovery airfield in our region.
They were flashed in the cockpit. The fighters could launch in any
weather. The prob was getting them back down.

security police. Not a terrible fate, but they're usually outstanding
more than the weatherman. Hi!

Sometime during 1979-80 our weather circuits in CONUS switched over to
something called "COMEDS" with a CRT/keyboard and a high speed printer.
The printer was incredibly loud and had to be housed in a sound box.
It used fonts loaded on a tractor belt, and it spun at a high rev. It
made loads of yellow paper dust. Don't know when they upgraded
overseas, but by the time I got back to Korea in 1988, the switch had
been made.

The USA VEC decided to return the Morse Code exam to 13-15WPM rate
despite FCC regulations to the contrary.

> fixed! :-)

Yep, he said "mash," but must have been mistaken when he said they would know how to read.

You see, people that use a microphone are clods. They would never "depress" the ptt button, nor would they "press down" on it. They are of low intelligence and barely human, and only know how to "mash" said button. If no one is looking, they may actually step on the microphone with bare, dirty feet and yell into it.

People who use a telegraph key are genteel. They know how to properly close the contacts, form a character, and move on. They do so with their pinkie finger extended, and have no dirt under their nails.

For it is written.

Yep. Must be why the military schools don't have to teach radio-communications anymore. Heil said so. Everyone is born with the innate knowledge and skill to set up, operate, and maintain satcom, HF, and whatever else they're using.

And hams, forget about attending a satellite, digital, or aprs seminar at the next fest. Not needed. No siree.

Hi, hi, hiel.

Good grief.

Not exactly. It's Farnsworth method with an overall speed of 5wpm. That gives the brain longer to decode each character, and the hgiher speed of the individual characters still doesn't force you to read the character as a whole. It's still possible to read the individual dots and dashes. Bearing all that in mind, I have no problem with it.

What did annoy me was that the NCVEC did eliminate the multi-choice option in direct response to the abolition of the 13 and 20wpm tests, so the 5wpm test is now harder than it was before, for no other reason than to make it harder.

The point of the argument is for amateur's radio to grow amateurs are
going
to have to compete with the internet. Compete in the sense of getting
people into the hobby. The old modes of communication isn't going to
cut
it anymore. The vast majority of people would rather get on the
internet
instead of getting into a hobby which has nothing to really offer in
terms
new modes of communication. Many amateur radio operators can face the
fact
that amateur radio is slowly falling behind in technology and thus in
turn
is slowly dying off. Amateur radio will not grow if you can't get
people
into the service. You can drop the licensing structure down to nothing
but
no one will come into a hobby without dated modes of communication.

Like I said BB I would like to see them come up with something different. Secondly I really doubt that 600,000 amateurs came up with the same idea, if they did the system would be in place but it's not. nor, would I be in the postion to defend those "appliance users" on this newsgroup. Finally, the whole point is, amateurs are going to have to get it in their head to compete with the internet. compete in the sense of coming up with new ideas and new modes of communication to get people into the hobby. without people you will not have an amateur radio service. This is the 21st century and amateurs are still using outdated modes of communication. As I stated before if you were to go on the street and ask the average person if they had a choice between amateur rado and the internet the vast majority would pick the internet. Sure a lot of people don't know or ever heard of amateur radio, but at the same time if you were to explain it to them they would probabaly still pick the internet. they can do everything an amateur radio operator can do on the internet mode wise and more. Amateurs are falling behind in the tech world the problem with is those outdate CB operators/appliance users who don't want the system to change and fear anything new.

"...your try to do"...?!?!

No, it's not, Brian. I warned you where YOUR conduct would take
us two weeks ago. You drove right on in. "It's your world, Boss".

All I ask is that people be truthful and take responsibility for
thier actions like the rest of us do. To acknowledge their errors when
those errors have been shown and proven to BE errors.

You and Lennie think it's OK to lie and be deceitful in public. I
say that's not civil. You say I'm nuts for pointing out that you are
liars. I may be "nuts" for being as persistent as I am, but that still
doesn't diminish the fact that you and Lennie are liars.

It really is THAT simple.

See "what" that isnt' there?

The Pathological Liar Known As Lennie, on more than one occassion,
claimed to being able to do code at or about 10 WPM.

Yet he has not only NOT taken the 5WPM test associated with the
Extra Lite as he asserted he would, he can't apss the NO CODE test for
the Amateur Technician class license.

Oh yes...Lennie is every bit a "beaten" man!

Incompetent, unqualified and beaten. In every regard.

Well, old boy, no one would want you to be "bothered". If you're "Extra
right out of the box" brage had resulted in success, we'd have heard no
end to the triumph in exhiliration--or even exhilaration. :-) Fact is,
you've spent years writing of the morse code test in amateur radio but
not one minute in trying to pass it.

> >No candidate for the Amateur Extra can or must take the morse code

There's one way to find out. Take the exam.

> >That's the same way I learned typing, Len. Similar methods can be
> used
> >in learning morse code.
>
> Why should I "have" to learn morse code?

You don't have to learn it, Len. You needn't attempt an amateur radio exam. You may spend the rest of your days watching TV.

> I didn't need any morsemanship skill a half century
> ago to operate lots of radio transmitters on HF.

That wasn't amateur radio and you aren't doing it now.

> I didn't need any morsemanship skill from 46 years
> ago until the present to operate radio transmitters
> on HF.

That wasn't amateur radio.

By the way, don't you have any current experience or do you always dwell in the past? :-)

> >If you'd applied those methods to developing
> >morse skills you'd have had a ham ticket for decades.
>
> Why must *I* do those things?

I implied no "must". Feel free to watch from the sidelines.

> The FCC isn't that concerned about "my" development.

Neither am I. I'll bet we could make it nearly unanimous.

> Why do you fabricate all this "personal" nonsense?

What was fabricated, Leonard?

> Such doesn't apply to pointing out that the morse code
> test for an amateur radio license is far past its
> usefulness.

I'm not attempting to point out anything like that. You must be
confused.

> Besides, NO ONE could possibly go through that
> extremely tough code test done by Heap big Dave.
> NO ONE. :-)

That is absolutely factual, old bean--not you, not anyone.

> >Sitting around
> >here grousing hasn't done much toward that end, has it?
>
> In your case, that IS true!

My! You ARE confused. I'm not attempting to remove morse code testing
in amateur radio.

> Now, I'll repeat my question: Why are you fabricating
> a false condition and why are you making this some
> kind of "personal vendetta" for yourself?

The answer is quite simple. I've fabricated nothing. I don't want you
to take any of this too personally. I'd use the same tactics in dealing
with anyone who acted like you.

> Relax. Have a cashew. They came from Guinea-Bisseau.

Is this another of your twisted fables--the fox and the cashews?

> terms
> new modes of communication.

The vast majority of people are never going to become hams. It has
always been that way and will always be that way.

> Many amateur radio operators can face the
> fact
> that amateur radio is slowly falling behind in technology and thus in
> turn
> is slowly dying off.

You've managed to dump a couple of false premises in one sentence.
You're wrong about technology and about amateur radio dying.

> Amateur radio will not grow if you can't get
> people
> into the service.

Amateur radio licensing numbers are near an all time high.

> You can drop the licensing structure down to nothing
> but

> no one will come into a hobby without dated modes of communication.

I'm too busy laughing at your sentence to give you a serious reply,
Todd.

Brilliant, Todd! Without people, there'd be no Social Security.
Without tires, there'd be no driving.

> This is the 21st century and amateurs are still using
> outdated modes of communication.

What makes a mode of communication outdated, Todd? Is it simply the
number of years it has existed?

This is the 21st Century. Do you think you have 21st Century writing
skills? If you have the latest high speed modes of communications open
to you, are your skills such that you can use them to express coherent
thoughts?

> Amateurs are falling behind in the tech world the problem with is those

The Intl. Morse Code is very simply, an old digital
modulation form we called PWM; Pulse Width Modulation.
Hasn't been around in the commercial domain in at least 20
years. You could also make the argument that it is
"tri-state" since we have dits-dahs-off. However,
conventional tri-state logic usually had the pulses
oppositely polarized around the zero baseline.

> >> part of their task of regulating all U.S. civil radio.

And that testing includes both written and code testing. FCC has
decided
that both are necessary for HF/MF license privileges. Of course that
could have been changed any time after mid-July of 2003, but so far FCC
has decided not to.

> >> 2. The VEC Question Pool Committee decides WHAT
> >> the questions are; FCC only specifies a total number
> >> and the percentage correct for passing.

INCORRECT!

ALL questions in the written exam pools have to be approved by FCC,
both for inclusion and removal. While the questions, answers and
distractors are
created by the QPC, they must be approved by FCC.
> >>
> >> 3. Any other reason is meaningless... ;-)

The plain, simple fact of the matter is that the same arguments used
against the code test can be used - and are being used - against
almost all of what is in the written test.

> > The USA VEC decided to return the Morse Code exam to 13-15WPM rate
> > despite FCC regulations to the contrary.

INCORRECT!

The use of Farnsowrth-spaced Morse is simply a recommended practice,
not a requirement. If someone wants non-Farnsworth Morse for Element 1,
the VEs will accomodate them.
>
> Not exactly. It's Farnsworth method with an overall speed of 5wpm.
That
> gives the brain longer to decode each character, and the hgiher speed
of
> the individual characters still doesn't force you to read the
character as
> a whole. It's still possible to read the individual dots and dashes.

It may be possible for *some* individuals to count dits and dahs at
13-16 wpm character speed, but for most people who have been evaluated
it is easier to hear the letter or number as a unit of sound. The
exaggerated spacing between the letters/numbers allows more recognition
time, and particularly more time to write or type the letter/number.
Hence Farnsworth spacing usually makes it *easier* to pass the test.

> Bearing all that in mind, I have no problem with it.

Nor I.

> What did annoy me was that the NCVEC did eliminate the multi-choice
option
> in direct response to the abolition of the 13 and 20wpm tests, so the
5wpm
> test is now harder than it was before, for no other reason than to
make it
> harder.

IIRC, FCC outlawed multiple choice code tests. While NCVEC may have
commented against them, FCC makes the rules.

Multiple-choice was eliminated because FCC decided it didn't really
test the skill as required. There was a *lot* of comment against the
multiple choice code test.

Perhaps a compromise could be used. Suppose the code test were replaced
with a test of - say - skill in solving transmission-line problems with
the Smith Chart...

Indeed tri-state would be a better description as the "off" periods in Morse
convey information necessary to "decode" it.
Since an off time is not a signal, maybe Bi-Signal in Tri-state format
Nah -- just tri-state I guess (;-)

With proper sending or machine Morse:
Each dit is one element, each dah is three elements, intra-character spacing
is one element, inter-character spacing is three elements and inter-word
spacing is seven elements. Three states indeed.

In a military system I worked on in the 60's, PWM was a method of digitally
encoding analog signal levels.

Glad to see we could have this discussion without raving and ranting about
the "The Code Test"

Or more practical skills which I have found sorely lacking even in
appliance operators but are essential even for a non-code Tech:

Questions on how modern equipment is set up and tuned. Not for
specific models, but for equipment in general:

Understanding how a receiver is set up for SSB, FSK, CW, AM
reception. Functions of bandwidth and notch filters and
filters, and when to use or not to use them. How to detect
receiver overload/spurious responses and what to do about it.

Understanding on how a transceiver is set up for simplex and
repeater operation. What the offset and tone code functions
do, and how to determine what the settings should be for any
desired operations.

Electrical and rf safety considerations in installation and
operation of ham gear.

My two electrons worth.

How can you compare the internet to ham radio? Ham radio is using the 'ether', not wires and computers. There is no competition between internet and ham radio. Those that are actually into real radio will choose ham radio, those into computer things will choose the internet. Of course there is a spill over between the two. But that only enhances the experience, not competes with it.

There will always be a ham radio. Probably not in the form it is today. And what is wrong with liking the modes we use? Hams still us AM, and we would still be on spark if it were allowed. Just because it is old, does NOT make it bad.

Hams do contribute to the state of the art. Where do you think SSTV came from ? Just one example.

No, not all people well get into amateur radio, but unless you can come up
with new idea's the service will die. I was talking to other amatuers about
this subject odd of the internet and agree that amateur radio will probably
die off in a few years.

People have been using their voices for thousands of years, so is that an 'outdated' form of communication? According to you it would be. Language replaced grunting, burping and farting as forms of communication, but you can still use that form of communication if you want to. How about implanting a CPU into everyone's brain so that we can communicate using brain waves? Amateur radio is in no way competing with the internet. They are both forms of communication. Now, with your brilliant thought processes, try coming up with something worthwhile to communicate.

"Language replaced grunting, burping and farting as forms of communication."

Huh? That is a common form of syntax used on 75 meters provided it's broken into Morse(L) sized bites.

Source record: 103394

Why not maintain the 5WPM requirement in the U.S., but give No-Code Techs access to the 80, 40, 15, and 10 meter old novice sub-bands. This would allow aspiring upgraders a place to hone their skills without having to just listen to recordings. Also, the sending skills can be developed as well. A side benefit would be hearing the sound of CW again (even if it's bad) in these largly unused segments. Just a thought.

Sounds reasonable. Heck, eventually the FCC will acquiesce to those who feel amateur radio privileges are rights rather than privileges. I personally believe the FCC is going to retain Element 1 solely for the Extra class license. This would actually be a more balanced alternative, IMHO.

Please patronize my concession stand at area Hamfests.
I will be selling a kit containing much needed items typically
required at hamfests. My kits will contain:

Deodorant to mask body odor
Appetite suppressants
Shave cream & razor
Wash 'n Dry towelettes for slobs.
Change of underwear
Hair lice treatment
A book on how to stop bragging about your accomplishments

73,

Lloyd

We've long since left the American core value of "priviledge is
earned", Bert. It started with Johnson's "Great Society". The "Great
Entitlement Giveaway" has been gaining momentum since. It's now
self-perpetuating. You have a pulse? You're entitled to what ever you
want regardless of whether you earned it or not.

In any case, I tend to agree with you on the Code issue. I'd go a
bit further and grandfather all the Advanced guys into Extra if for no
other reason than eliminating some administrative headache. Readjust
some of the sub bands a bit, then have it down to truly three classes
of license...Not three active and then several other "if you were
licensed on this date, "this", if you are one legged and whistle while
roller skating, "that" class, etc etc etc...

EXTRA: Remain as is. Full privileges and 5 WPM test.

ADVANCED: Grandfathered to Extra. Class eliminated from
database.

GENERAL. Becomes No Code. Present Generals remain. Sub bands
adjusted with Advanced "upgrade".

TECH PLUS: Must take written for upgrade to General with HF theory/practice/safety questions. "Novice" HF privileges revoked, but CSCE for 5WPM remains valid for future Extra upgrade.

NC TECH: No Change.

NOVICES: No more renewals. Put on notice that if they don't upgrade by next renewal date, the license is eliminated. Possible alternative, grandfather to NCT?

None of those you refer to as "a bunch of morons" use such language to
you. If I understand you, you are being forced to use the language
because others aren't taking your ideas seriously.

> And FYI I'm currently in college working on my degree what

CB operators? You're in the wrong newsgroup.

Appliance ops? Almost all of us use some or all commercial equipment
these days, Todd. For me to build the equivalent of just my primary
transceiver, it would need to be housed in a garden shed and would take
up several years of spare time. Just so we know, what sets you aside
from the rest of us? What gear do you currently use which you've
designed or built yourself?

There are too many proposals already, that's why the FCC is taking so long, in all probability. FWIW, here's mine:-

1) Drop Element 1;

2) Upgrade Novices and No-code Techs to Tech Plus privileges, but just call it Technician;

3) Upgrade Advanced to Extra

4) 'Re-farm' the Novice subbands as already agreed by the FCC;

5) As (4) above also affects (2), some further adjustments would have to be made to Tech privileges, so I suggest giving them General CW/Data on 80, 40 and 15, plus full privileges on 10.

I don't expect everyone to agree, but I can't resist posting my two cents!

Wow! That's quite a vocabulary, Todd. You've referred a number of
times to your "broadcast". Your information bulletins are apparently
quite hard to find. That would apparently limit their usefulness.

Care to answer the question about what new modes you are using in
delivering your broadcasts/information bulletins?

> >> The vast majority of people would rather get on the

Not even a significant segment of "all people" has ever been a part of
amateur radio. Do you see anything wrong with that?

> I was talking to other amatuers about
> this subject odd of the internet and agree that amateur radio will probably
> die off in a few years.

Some people believe that we'll be ruled by a "New World Order" and that
they should start hoarding can goods and MRE's. That doesn't mean that
it is likely to happen. Your term "odd of the internet" might be a good
description of the folks who believe such things.

> >> Many amateur radio operators can face the

How about defending one wild idea at a time before moving on to the
next?
You didn't write anything earlier about amateur radio coming up with new
technologies worth getting into, you wrote about amateur radio falling
behind in technology. It isn't. Individual people who happen to be
radio amateurs have often been on the cutting edge of technological
development.
"Amateur Radio" as a whole doesn't create technology. Individuals do.

> >> Amateur radio will not grow if you can't get

What percentage of 600,000 or so individuals is 1,000? Do you think
that
599,000 people is near an all time high number of American radio
amateurs?

> >> You can drop the licensing structure down to nothing

Why would have to have the guts to try eliminating a regulation when they support retention of the regulation?

You've petitioned your government for change. Nobody stopped you. I'm sure you've been disappointed a number of times in your life when you petitioned government and the changes you desired just weren't implemented. Other folks have desires and the ability to petition.

> You wanted to buy into the old beliefs.

You didn't and are still on the sidelines.

> amateurs are going to have to compete with the internet.

Nothing new about that! Amateur radio has always had to compete with other pastimes ... TV, video games, baseball, stamp collecting, chasing girls (boys), skateboarding, fishing, ...

It's not an "either/or" deal. I have many pastimes .... amateur radio doesn't get tossed out the window because I gain some other new interest.

Your point doesn't hold water.

I usualy go by the digital form factor here. a space is a space.
Thus my logic:
dih = short mark
dah = long mark
space = 0

I have listened to quite a lot of CW of the years. I don't see where a long
space counts. in a lot of the programming interfaces for things like a TNC
(or a computer program), they only coult the above named 3 states.

a long silence is just a number of "space" markers (more than one).

ah well.

As i wrote before

With proper sending or machine Morse:
Each dit is one element, each dah is three elements, intra-character spacing
is one element, inter-character spacing is three elements and inter-word
spacing is seven elements.

Seems to be five pieces of information by your assessment

This makes no sense at all. If the so called no-code techs can't do code now, how would giving them access to code only portion of the bands help them learn code? If they want to listen to code, they can do that now without a license. There are code portions of the 2 meter and 6 meter bands that they have access to now, but I'll bet none of them go there to practice code! Five wpm isn't that much, if you know the characters already. If you don't know the characters, then I see no way that you are going to practice sending code?

>Hams do contribute to the state of the art. Where do you think SSTV
came
>from ? Just one example.

Bell Labs and the "PicturePhone"? :-)

Went into service on the Bell System over four decades ago, got
deleted for lack of interest/use some years ago. Worked on a
very limited bandwidth.

The genesis of Slow-Scan TV began in several places. One could
say its start was the first Facsimile...very slow data rate. A very
close cousin was early television, also done at a very slow data
rate considering their dependency on mechanical scanning. A
few amateurs tried to advance into professional ranks with the
mechanical scanning TV but none were successful.

All that was before the USA got into WW2. During WW2, TV
was rather limited but "wirephoto" facsimile got popular on wired
communications circuits. A medium-scan-rate TV system was
used on some experimental guided bombs late in WW2. "FAX"
got its acronym-name during that war and was used for graphics
such as weather maps sent out over HF radio circuits.

With the end of WW2 began the virtual explosion of broadcast
television and the availability of TV camera tubes, TV picture
tubes, newer circuit technology (DuMont "flying spot" system,
a sort of reversed light-subject-camera arrangement) and wide-
band modulation (6 MHz in the USA, included audio). There
began lots of research into Information Theory and Bandwidth
in the late 1940s which resulted in insight to necessary
bandwidths to maintain low error rates ("Shannon's Law" of
1948). Many different experiments began to send "live" TV
at reduced bandwidths and the Bell "PicturePhone" was just
such a system which did go into service in the NYC area.

Information Theory got a few boosts from greater efforts of
cryptologists during the Cold War trying to devise better codes
for sensitive communications. Information Theory eventually
morphed into the Motion Picture Experts Group (MPEG) which
had formed about the same time as the explosion of the
desktop personal computer during the 1980s. MPEG was
based on earlier work using "blocks" of picture elements and
their examination of redundancies plus the availability of new

and better digital logic circuits to process the image blocks.

Nearly all amateur "slow-scan TV" is little more than high-rate facsimile...on the order of the "PicturePhone" imaging. None of it is the moving picture quality found on the modern enhanced cellular telephones using MPEG compression-expansion of image data.

"Modern television" (defined as all-electronic scanning) is wide bandwidth to preserve image quality. What is broadcast, even with old-style black-and-white "original" NTSC standards, is quite good. Any "NEMO" watcher (NEtwork MOnitor) viewing the direct input from a microwave relay link can tell you that. The same with the "air monitor" checking transmitted video. Early domestic-production TV receivers deliberately limited bandwidth to reduce costs, resulting in receiver picture quality being awful to poor compared with what was transmitted. The picture quality on amateur SSTV is approximately the same as early domestic-production TV receivers, but SSTV cannot handle motion nearly as well.

Modern FAX standards use some data compression but that is limited. Picture quality there is reduced compared to what was possible with older, uncompressed facsimile.

Amateur SSTV is NOT an "original" thing from hams but rather an adaptation to stay within shrinking RF spectrum on VHF and above available to amateurs. If it were ever standardized as to scan rates and bandwidth, there would be a chance for improvement. As it is, it remains a novelty, something good for the editors of QST to crow about. "PicturePhone" went into the dumpster long ago and SSTV will probably wind up there.

I don't understand people who complain of others using
cell phones to get stuff done or such while waiting on
line to pay for stuff at a store. You should be mad at the
store for forcing us to waste time on line than me trying
to use that time with the cell phone.

Motion? SSTV doesn't handle motion at all.

> above available to amateurs.

VHF and above? While there are those using SSTV on 2m and above, most
SSTV is done at HF, Leonard. Real ATV is done at 70cm and above.

> If it were ever standardized as to

SSTV has been in wide use on the HF bands for some decades now, old boy.
That would hardly seem to be a novelty.

That's what I have thought would be a good way to go. Simply make all Tech licenses the equivalent of the current Tech with Morse. That gives them the old Novice code bands and the old "Novice enhancement" of 10m voice.

Actually it might give them more incentive to work on it since they could
use it right away.

Sadly, it's exactly the opposite. They appear to have no wish to "work" for HF privileges. Anything other than a complete "gimme" is unsuitable.

Sorry, but real "communicators" refer to "key" when they load an
encryption code.

Heh, heh, heh.

I had Kim shuddering that Larry tRoll had come back, Dan defining what a real communicator is (hi, hi), Alun ready to kill file me (ouch!).

All in all, I'd say I done excellent, but my nails are clean and I depress the PTT button. There goes the damned stereotype.

OH REALLY, tell me what new advances in radio communication have amateurs
come up with in lets say last 10 to 20 years???

answer....NONE!!!

Todd

Hey, you have an excellent idea that should have flown in the 1970's.
Maybe early 80's. Way too late for that kind of nonsense today.

This would
> allow aspiring upgraders a place to hone their skills without having

The people that were once willing to learn Morse Code have done so.
You saw the end of the line some time ago.

Yep, just like when Ron Reagan said, "Mr Gorbachev, Tear Down That
Wall!"

And those East Germans got a free ride to freedom. It was all just
terrible. Freedom turned out to be free after all. They should have
been made to work for it. Uphill both ways. Show the proper attitude
and all that.

I say, "Mr. FCC Chairman Powell, Tear Down That Wall!"

But the bricklayers are busy. Very, very busy.

Odd how you have to continually beat down a beaten man.

It's almost like your beatings have no effect. Rather, it's like your
beatings have no effect whatsoever.

Welp, twit, with respect to Len getting "Extra right out of the box"
you bragged that "I just did it." But your first license looked an
awful lot like a Novice license.

Would you care to explain how your Extra license came with a Novice
call sign?

Didn't think so.

Kindly point me to any FCC publication that says it is so.

What you'll find is a Government Agency that grants or denies
permission to the amateur setaside HF frequencies with an exam that has
no definition. A Pass/Fail test that has no answers.

Hi, hi!

Thank you.

Hospitals, government buildings and various other places that don't
allow cell phones automatically turn off cell phones. They seem to be
growing in popularity. The cell phones are designed with that ability
built in for that purpose.

If you are in a place that disables a cell phone, you may find out you
are somewhere near a LL and the employees will likely let you use it
for an emergency. If not, then you WILL have a lawsuit.

Well, how many different ways do you want to be able to exchange signal reports and WX, or God forbid, information bulletins? How many positions do you want on the old MODE switch? The point is, try exchanging something useful or interesting rather than worrying about how the information is exchanged. You aren't going to get an interested audience for your 'information bulletins,' either, because you have nothing useful to convey, so give it up. You are just going to make enemies and take up space like K1MAN. Originally you planned to do your broadcast on 10 meters at 9 PM. At that time of night, no one beyond about 10 miles is going to hear you. That, right there, demonstrates your knowledge of radio and propagation. Only a freaking CBer would consider doing a 10 M broadcast at 9 PM. As for SSTV, after you exchange a few poor quality pics of the OM, the shack, or maybe the XYL's butt, what more do you do with it? You say that hams should work to ADVANCE radio communications? WTF What is the next step? DXing space aliens? ROTFLMAO

Well, here is mine too:

1) New Novice Class (upgrade novices to this.)
HF Top 1/3 of SSB and CW bands on each of 80, 40,
15, and 10 meters
Maximum Power 20 watts.
2 meters 147-148 MHz Max 20 Watts
No other V/UHF

2) General Class (Upgrade Techs upon renewal, change of
address, etc.)
Top 2/3 of each cw and ssb band on HF 160, 80, 40, 30, 20, 17,
15, 12, and all 10 meters. Max Power 500 Watts (even in
novice bands)
Full 60 Meter as regulated.
All V/UHF priviliges up to 500 watts.

3) Amateur Extra Class (Upgrade Advanced upon renewal etc.)
All HF VHF and UHF priviliges with 1500 watts. (except 60 or
others as regulated.)
Require element 1 and the same tough exam.

This may create incentives for upgrade and reward those who do so.

Earn your priviliges. It isn't impossible.

Buck

Yes, yes. And the Titanic should have had a caring CW operator, and a
few more life boats. And Leonardo Decappitico.

Jim thinks it should have sped up and rammed the iceberg. He's a
neocon on icebergology.

Power levels are hard to enforce from a remote listening
post. Frequency is easily enforced; that's why they
do subbands for differing license grades.

> Full 60 Meter as regulated.
> All V/UHF priviliges up to 500 watts.

THe FCC was thinking that if they get rid of code tests,
that would reduce workload and administration duties.
Keeping code for extras and not generals doesn't get
them this. In which case they may decide to leave things
as is.

> This may create incentives for upgrade and reward those who do so.
>
> Earn your priviliges. It isn't impossible.

Just be sure that the things one needs to do to earn the
privileges are revalent to modern ham radio.

One feature of letting them use HF code bands is propagation.
They would more likely be able to find someone else to QSL
with somewhere in the country vs only in their county. And
as hams already they should know the protocols about listening
first to see if the freq is in use at the time or not, etc.

Oh, it's one of those words I can't spell and the stupid
spell checker can't figure out. The word that means stuff
that is logically connected to a goal and sensible. Code
was very realivlent 50 years ago but less so today. Damn
spell checker still can't get it....

Len gets no respect. He got nothing out of that box. Zip. Nil.
Zilch.
Zed.

> you bragged that "I just did it."

No bragging was done. That was the entire point of my comment. There
were no announcements in advance.

> But your first license looked an
> awful lot like a Novice license.

How would you know? You've never glimpsed it.

> Would you care to explain how your Extra license came with a Novice
> call sign?

My Extra Class license didn't come with a Novice callsign. My Novice license came with a Novice callsign. It was followed by my General, Advanced and Extra licenses. I can well understand your confusion though.
I forgot that you were part of the audience. You must have thought that I was stating that my first license was the Extra. It wasn't. The point was that no boast preceding my obtaining any of those licenses.

If you're counting. I've passed amateur radio license exams for four classes of U.S. amateur radio license to Len Anderson's none. So much for his decades-long interest.

> Didn't think so.

Darn, you're wrong yet again, runt.

>
Well, I answer you first, then I'll answer your girlfriend who emailed me.
The POINT of this post is simple, Amateur radio is dying, for really two
simple reasons The first is amateur radio is falling behind to the
commercials. While amateur's get off on Slow Scan TV; Commercial services
are able to stream live audio and video over a short band space due to
digital compression. While Amateur's are fornicating themselves over 300 and
1200 baud, Commercial service with WiFi are able to go 1000 times faster,
ranging from 1Mbaud to 11.5Mbaud on the 2.4GHz band. And I could go on and
on. "You aren't going to get an interested audience for your 'information
bulletins,' either, because you have nothing useful to convey, so give it
up." That's Your Opinion I believe in the idea that a person should get the
information and disseminate it themselves. Unlike you who I believe has this
idea that this is a dictatorship and some moron and his little buddies on a
newsgroup, on the internet speaks for all the amateur radio community.
Secondly, you've never hear my broadcast thus, you assume that the
information bulletin is useless. Finally on that, unlike K1MAN who broadcast
24/7 I'm only transmitting for one hour once a week, a far cry from what
K1MAN is doing. and Unlike K1MAN I use a frequency that isn't in use and ask
three times "if the frequency is in use" So don't fucking compare me to him.
That's why I orginally had it on 10 meters so not to cause interference,
unlike you who would probably transmit on top of people. I do have some
curiously something you and your little friends can't grasp. Which bring me
to the second reason amateur radio is dying. It's little toadies like you
who fear new things or something that is legal under the law and either find
the frequency they are running and key up top of them, or better yet go

crying to the FCC so they can supress that stations free speech simple because you don't like what they are doing.

Todd,

I am a friend of Bathrooman. I have read many of your posts and it is quite clear to me that you don't know what the fuck you are talking about. You don't know dick about amateur radio, and you can't even write a sentence that makes any sense whatsoever. Why don't you just go back to your shack and try to work some ham at 5 WPM in the novice band. If that is too fast for you, slow it down to 2 WPM and see if you can copy that.

Juilo De Jesus

Now I have a question you and this little friend of yours here, are you both real amateurs or amatuer radio operator wantabe's who sit on amateur newsgroup and think your important.

echolink iss live feed 1647utc monday 28th feb 2005

A live feed of the ISS contact with a school in Bentley CA will be sent live into the AMSAT conference room, Echo Link node 101377 by Dieter, KX4Y. The contact between the ISS and school starts at 16:47 UTC and lasts for about 15 minutes +/-. During this contact, we appreciate everyone's patience and understanding. We must mute everyone except Dieter, KX4Y to avoid inadvertent, interfering transmissions into the conference room. Thanks for your understanding and cooperation.

American hams in the footprint can listen on 145.800 FM to the 'live' downlink audio

1943. THE EXCLUSIVE MORSE CODE EXAM DEBATE THREAD

Newsgroup: rec.radio.amateur.policy
Date: 2005-02-26 11:06:41 UTC
From: K4YZ <k4yz@aol.com>
Message-ID: <1109416001.768770.116640@g14g2000cwa.googlegroups.com>
Source record: 103459

Hello One and All,

Our Resident Antagonist (Lennie "I Am Not A Liar" Anderson) is a bit miffed becasue there's no thread to discuss the "Morse Code Exam Issue". Personally, I think the subject has been beaten until every last bit of life has been beaten from it, but just to prove him wrong, here's a thread, JUST for him.

So...Does anyone have anything NEW to discuss about the "Morse Code Exam" issue? Does anyone care to engage Lennie in yet another "debate" on the issue? He sure is sore because we've tired of it and won't play his game any more, but his one track mind is still raring to go.

Betya I can sum up a lot of his "arguments" right now and save some bandwidth:

(1) He "keyed up" some Army transmitters (not Amateur Radio) as a radio repairman in the 50's without the benefit of a Morse Code exam, ergo no one should have to take any exam.

(2) He spent a lifelong career as a bench technician, ergo he shouldn't have to take another written exam. Afterall, he spent 14 years in night school to get a 4 year BSEE degree, so that was ALL the work he should ever have to do again, ever!

(3) He has a GROL that he claims allows him to transmit anywhere. But he keeps omitting the part where his license also requires a duly authorized Station License or authorization for the "station" he is "operating". That station license will dictate what discreet frequency he MUST use, what specific power limits he must observe, and in many cases even specifies the antenna system to be used right down to field strengths and ERP.

(4) He knows a few licensed Amateurs, a couple of them Extras, ergo he can say anything mean and despicable he cares to say about Amateurs in general or Extras in particular. Even moreso if the Extra is a 20WPM era one. Double that if they are actually proficient in Morse at or above 20WPM.

(5) He'll "argue" that since the physics of radio wave propagation are the same for "commercial" radio as opposed to "Amateur" radio, that there is no difference in the two. He continually tries to compare one to the other. They're not the same. Any referal to the Basis and Purpose of Part 97 will be dismissed as "administrative language" that doesn't mean what it says.

(6) He'll "argue" that Amateur Radio is "just a hobby", despite the fact that the enabling regulations for Amateur Radio say nothing of the sort. Any suggestion of volunteerism, civic duty, emergency service or other educational or philanthropic use of Amateur Radio will be dismissed as "patriotic buffoonery".

(7) He'll "argue" that Amateurs, especially the aforementioned Amateur Extras, are mired in 1930's era policy and practices despite the fact that every one of the regular posters of this NG has made comments to the FCC promoting significant changes to Amateur regulations, including Morse examinations and relevency. And after berating Amateurs for thier alleged stonewalling, he'll treat us all to yet another "...there I was at ADA in Japan in 1953..." war story that has absolutely no relevence to Amateur Radio policy in 2005, let alone anything to do with Morse Code at ANY time!

So...my opinion on what's most likely to transpire having been stated, let's get on with a spirited debate on the Morse Code Exam issue!

Remember...Morse Code Exam issues ONLY! Lennie Says So!

Why should ham radio be different than other activities? Most of the things we do to gain privileges in this world are not relevant to the privilege itself.

This is why real (paper) dictionaries still exist. Just by looking up the first three letters (rel...) one can scan the entries and find it and thus find how to spell it. Just an example of how "old" methods have relevance to modern life.

The 10 meter band was an awful choice. When it's dead, no one can hear you.
When it's open, you can interfere worldwide with a few watts of power.
Since one can often only hear one side of a conversation on that band, you
can interfer without knowing it.

It DEFINITELY would NOT have "flown" in the 70's, and wouldn't have
even made it to the airport in the 80's. Not only was there NOT the
support of the public for such an idea, the ITU treaty was very much in
place with NO broadbased support in the International Community for
it's removal.

I am very happy with 3945. From what I hear, the group is a well balanced representative segment of society. The conversations are insightful and provacative. During the early afternoon a gentleman named Jimmy keeps the group abreast of current events not covered in the mainstream news. Later in the evening the topics become more technical in nature. Antennas, audio, and the proper use of amplifiers can often be heard well into the early morning hours.

I have NEVER heard intentional QRM'ing from any of these guys, but I routinly hear intentional interference from the Virginia Fone Net and others. I've heard the Virgina group members laughing about tuning up on 3945 even though these guys (3945 Group) have been on the frequency for hours.

One evening the 3945 members surrendered the frequency to a Mennonite net when they were being QRM'ed by the Virgina folks. Friendy is the word.

I guess if there was a complaint I have about 3945 it would be that thay are a little on the rough side with regard to language. That being said, I will continue to listen and learn from 3945.

Now you go and have a great day.

I haven't made the proposal and if I did I suspect it would fall on
deaf ears. regardless, it was/is nothing more than my opinion about
something I would think is fair for Amateur Radio with incentive
licensing. without incentive licensing, take one general class exam
and become extra without code.

When it comes to the code/no code debate, my response has been
changed. Lately when someone tries to argue it my response has been

"Do away with all code,not for the good of amateur radio, but so this
25 year argument will finally come to an end.

Your points may be valid, but I can't say what the FCC can and can't
figure out with their equipment. Their equipment is more
sophisticated than most of what I have seen or used.

What headache? License class is just one entry in the database.

If any existing Advanced wants the Extra, all they need
do is pass Element 4. Which has been done by at least one third
grader.

You can always spot a honest lawyer. He is the one driving a five year old Chevy or Ford, and he wears suits purchased at the same men's store where you buy yours from. He's your neighbor down the street, since he doesn't live in a gated country club community where the cheapest house sells for $850,000. When he comes upon an automobile accident, he renders assistance, versus handing out his business cards. He humbles himself before the same God you do, versus thinking he IS God.

The first is amateur radio is falling behind to the
commercials. While amateur's get off on Slow Scan TV

For your information dumbass I have an extremely high IQ.

High IQ compared to what? An ant? Where the fuck did you learn to
write?

I didn't file my proposal either. I did have a petition ready to go, but I wa stalked out of filing it by NCI, as they thought they could get Elemnt 1 abolished without going through this whole NPRM cycle. We all know what happened to that idea. BTW, where is Carl anyway?

Actually it's been going on for at least 82 years that I know of, but WTH!

If there's one thing that we should all be able to agree on, this is an argument that can only end in one way, and maybe not even then. As long as there's a code test there will be an argument. I agree, it needs to be over.

> Your points may be valid, but I can't say what the FCC can and can't

Power limits can't be enforced, but they are the right way to distinguish between ability levels, and different slices of the same band aren't. The former mitigates the msitakes of the less qualified much more effectively, and most people are relatively law abiding. If you had to be an Extra to own a big linear, most people would think twice.

It's much easier to use a Smith chart than to do the calculations

It's quite whimsical, but hardly really comparable with CW. I would be happy with just theory tests where both the Smith chart and CW were in the question pool. If there had to be a skill test it ought to involve soldering and/or putting on a PL 259, IMHO, but I don't think even those things as essential, in fact for my money you could just put those things in the theory test too. When it comes to doing them, people learn quickly enough.

It voice? Which type voice mode--SSB, AM, FM? How about the new modes
which you claim amateur radio should be championing? Shouldn't you be
doing your broadcast/information bulletins using one of those new modes?

You don't need a Smith chart and you don't have to do the calculations
either.

Take it from me that measuring the frequency and occupied
bandwidth of a signal is much easier and more efficient for field
enforcement) than making a measurement of transmitter power. The
former can be accomplished by one person at a remote location while
the latter involves simultaneous measurment of transmitter power
output while observing antenna direction/placement and received
signal strength to ensure what is being tested is in fact what was
being used before the inspection. Those observations must be made
at a point sufficiently removed from the antenna to avoid instrument
overload, and therefore requires at least two people and communication
between them.

It does not mean that things are messed up. It is simply a fact that a very effective way to motivate people to do something that they don't want to do is to tie it to a privilege that they very much want. Parents do it all the time.

Just what I thought. Next time you brag to Len about getting "Extra
right out of the box," be sure to say that it was your Novice that you
got right out of the box, not Extra.

Carl Stevenson has been very busy working with the IEEE 802
groups on wireless standards (among other things).

Please fill us in, Alun, what happened with that NPRM cycle?
Last I saw, NO NPRM had been released yet concerning test
element 1. The only one released was a general "housekeeping"
update of amateur radio regulations.

>> When it comes to the code/no code debate, my response has been

>Actually it's been going on for at least 82 years that I know of, but
WTH!

That would be since 1913. I don't think so. In 1913 amateur
radio was ALL about morse code. ARRL had its "president for
life" (H.P.Maxim) set to go but wasn't fully formed yet as an
actual local New England amateur radio club organization.
[ARRL was incorporated in 1914, two years after the first
U.S. radio regulating agency was created]

The no-code-test amateur radio license advocacy began in
the late 1970s. That grew until the FCC (in copying other
countries' license classes) released FCC 90-53, the NPRM
for creation of the no-code-test Technician class. That was
in 1990 (first two digits indicate the year) and the Report &
Order granting the sixth license class was released in 1991.

>If there's one thing that we should all be able to agree on, this is
an
>argument that can only end in one way, and maybe not even then. As
long as
>there's a code test there will be an argument. I agree, it needs to be

>over.

Apparently the argument causes much pain and suffering
among the already-tested-for-code-and-passed individuals.
Some of those, not receiving their (intrinsic?) due of respect
and admiration from others, grow livid with rage that such
arguments exist today. Poor babies.

The PCTA should be appeased. They've had their way
since 1912 amidst noble backing from Big Brother in
Newington and they demand capitulation to their wishes.

>Power limits can't be enforced, but they are the right way to
distinguish
>between ability levels, and different slices of the same band aren't.
The
>former mitigates the msitakes of the less qualified much more
effectively,
>and most people are relatively law abiding. If you had to be an Extra
to
>own a big linear, most people would think twice.

The major reason for any sort of "incentive" licensing was
to create the artificiality of some being better than others.
"Upgrades" are rewarded with more status, privilege, and
titles. That's very "feel good" for them, as close as we can
get to nobility in this American society.

The ARRL encouraged stepping up the "ladder of success"
in their printed propaganda for several reasons: 1. It was
something members and prospective members wanted to
hear, thus encouraging membership and renewal for same;
2. League hierarchy were conservative traditionalists and
they had all been morsemen long ago in their youth; feeling
that they were self-righteous role models they set up and
maintained morsemanship as the ultimate skill of radio
amateurs; 3. League lobbying of the FCC saved individual
radio amateurs from petitioning the government by
themselves, a complicated process prior to opening up of
the Internet to file petitions and comments within the last

decades. All other "reasons" for support of the "incentive" licensing are holier-than-thou rationalizations by the PCTA.

What seems to have been put aside is that amateur radio activity is basically a hobby, a personal recreation activity involving radio, something done for fun. To many, however, it is a self-righteous quest to be a "somebody," to be more "superior." By having federal regulations support their views, they fool themselves into believing they are superior. Ergo, certain "qualifications" for amateur radio licensing must remain forever (or as long as the "superior" ones live) because those "superiors" bought into the old ideas and passed those requirements.

Those who have passed the "mighty" tests sometimes assume way too much authority for themselves. What must be the peak (or perhaps nadir) of that is the market appearance of radio "badges" resembling public safety officers shields but marked with amateur radio callsigns. Those who have a foolish need to show they are "somebody" can purchase one and posture that they are "official" and thus "very important." :-)

This is the year 2005 and radio as a communications tool is 108+ years old. Radio has been continuously evolving in both technology and application. Governments now have plenty of radios and communications to do their tasks, outnumbering amateurs. It is high time that some olde-tyme hammes realign themselves to the cold, hard facts that amateur radio remains a hobby. Amateur radio wasn't created in the olde-tymer's visage and it should be open to all who care to enjoy it. But, the olde-tymer's don't want that...they lose their rank, status, title, and privilege if reduced to being just commoners.

Olde-tymers MUST keep the argument going. They are "superior" and keep reminding everyone that only They know what is good for everyone. :-)

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA

etc.

Kellie never used one in his life, apparently...:-)

Phil Smith's "wonderful diagram" is a standard
tool - today - for all RF designers.

It is so MUCH used that network analyzers even
have it for graphical display on the front panels of
such equipment. Today as well as 30 years ago.

But, a polar coordinate chart is for TWO related
quantities and that may be one too many for Kellie.

Tsk. I'll bet Kellie told that to the Captain at
dinner. Too bad Tenille wasn't there...

It's one thing for parents to do that sort of thing, but the FCC
isn't our parents. What does the FCC get out of requiring
element 1 nowadays? The treaty requirement is gone, and
no other service uses Morse code anymore. Radio equipment
is more reliable today than 50 years ago. Stuff that took
20 vacuum tubes to do are now on a few ICs, and usually it's the
batteries that crap out before anything else goes out. The
old argument that code equipment is simple and thus more
reliable doesn't really mean much today as it did 50 years
ago.

If we want to attract younger people to ham radio, it
would be counter productive to require stuff no longer
relevant to get the license. There's many other activities
that don't require licenses that one could do, and they
could do exactly the interesting parts and ignore the
parts not interesting.

>It is a long standing standard based on the word PARIS
>Source
>(Source: U.S. Army Technical Manual TM-11-459/TO 31-3-16 - Sept. 1957)

>URL:
>http://www.chss.montclair.edu/~pererat/percode.htm

"Caveat," you are in ERROR.

That URL winds up at a private Internet page, NOT any military site.
It does NOT have any Army Technical Manual there that you
reference. It is an online "telegraph museum."

That website is in error in saying that the "original" morse code
had letters. It did not. The REAL "original" morse code was
only numbers. Letters and punctuation were added later and
available around 1844 when the first Morse-Vail Telegraph was
opened between Baltimore, MD, and Washington, DC...and used
ink lines on paper tape, no "sounders" (which were at least a
decade away from that). The Smithsonian has the original
"What hath God wrought?" paper tape message along with
Morse's handwritten inscription on it.

Not only that, but the FCC has failed to update its own morse
code reference in Part 97, Title 47 C.F.R. The FCC refers (still)
to an obsolete CCITT document which has been superseded by
an ITU-T document. That document does NOT have any "word
rate" definition in it although it does specify the character coding
based on the length of a "dit." [I have a copy of that ITU-T
document; Brian Burke has a copy of an excerpt from that
document]

Unless there's been a radical change in United States LAW,
codified law and federal regulations define what that law
should be. So-called "common knowledge" or "everybody
knows that" definitions aren't exactly lawful.

Yes, the U.S. Army did have (past tense) an "FM" (Field Manual)
governing the proper character/word spacing. FM rather than a
TM (Technical Manual). A TM is about equipment, not procedure.

1957 was 48 years ago, almost a half century. ONE Army MOS
(Military Occupation Specialty to you civilians who never served)

required morse code manual sending-receiving skill in 1957. That was Field Radio Operator. "Field Radio" at that time referred to the AN/GRC-26 HF station-in-a-truck-back-hut (500 W, two receivers, TTY, motor-generator set on tow-behind trailer, wire and masts enough to make a small rhombic wire antenna). In actual practice begun during the Korean War active phase (1950 to 1953) Field Radio "angry-twenty-sixes" used their TTYs for actual messages to-from field units. Morse code was not used in the field despite the capability for that. The vast majority of U.S. Army field radio operations was done by voice over AN/PRC-6, -8 through -10 VHF manpack sets, and by TTY through CF-1, -2 "carrier" equipment connected through AN/TRC-1, -2, -4, -8 radio relay equipment. Cryptographic capability was available for the TTY messaging in some areas, encryption-decryption done on-line using an updated version of the WW2 "Sigaba" equipment. You will NOT find any "morse code" skills taught at the Signal Center at Fort Gordon, GA. There is only one center for any morse code cognition today and that is at the Military Intelligence school at Fort Huachuca, AZ, and that only for communications INTERCEPT analysts (reception only). Fort sneeze is the place where all other government agencies go for learning morse code cognition; no problem, not a great demand for morsemen now. Huachuca code classes all use PCs running commercial morse code software; paper tape "code" readers went in the dumpster long ago.

There are NO U.S. military land forces using morse code for any tactical or strategic military communications today. There hasn't been such for many years. There are no commercial communications providers using morse code in the USA today. There hasn't been such for many years.

U.S. amateur radio remains the living museum of archaic radio skills. Feel proud to be an exhibit.

Hi Toddy,

My name is Julio DeJesus. I am an esteemed friend of the great
Bathrooman. I still think you are a retard with an IQ of about 2 or 3.
You need to take a course in writing because half of the shit you post
doesn't even make sense. Also, what you need to do (before you take
that writing course), is to take your god damned fingers out of your

ass!! You know absolutely nothing about amateur radio. The people that love amateur radio will keep the hobby alive, not the stupid ass ideas that you have come up with.

Oh yes indeed they do, as in KAC codes or the old antique KY-7 stuff, eh?
Well bb we are talking about ham radio. Of course I understand, LEN the
LOON, that you have no understanding of that subject.

Tweek twit.

>years. You could also make the argument that it is
>"tri-state" since we have dits-dahs-off. However,
>conventional tri-state logic usually had the pulses
>oppositely polarized around the zero baseline.

Sorry, the type of logic you describe is NOT conventional.

Today (as well as two decades ago) "tri-state" and "three-state" TTL digital logic devices exist and can be purchased by hobbyists or commercial manufacturers alike. They do NOT have three states of logic though. That "third state" is the control of outputs such that a separate disable control pin makes outputs appear to be open-circuited; i.e., they are in-circuit and connected but, when set disabled, have no effect on logic 1 or logic 0 electrical states for other devices. That is very useful in certain digital logic circuit arrangements.

According to several older ACM papers, actual three-state circuits existed along with some proposed "logic rules" for ternary circuit blocks. Didn't last more than a few years and disappeeared when standardized digital logic IC devices were available.

PWM or Pulse Width Modulation is VERY COMMON in electronics today, has been for lots of years. The most common use of that is electric motor speed control or small servomotor positioning (see Hitec and Futaba servos used in robotics). PWM voice and data modulation is still found on some private UHF to microwave radio relay links, sometimes multiplexed and applied as FM to the radio relay transmitter (hence it falls under the "FM" category of such). PWM is at the heart of all switching power supplies and supply ICs (hundreds of different ICs now available and growing) enabling much greater efficiencies in power supply conditioning for less heat and (for portable operation) less battery power drain. PWM is also at the heart of Class D audio amplifier ICs used in all sorts of audio-output consumer electronics (so called

"transformerless" audio circuits), those ICs being market-pushed by Texas Instruments among others.

What hasn't been around is PPM, Pulse Position Modulation for analog modulation of time-multiplexed multi-channel radio equipment. General Electric had a winner there with a 24-voice-channel PPM microwave radio relay which enjoyed commercial applications in a variety of uses, including long pipeline telemetry. PPM enabled a constant duty cycle on the pulsed transmitter operating in the old 1800 MHz band. Some installations lasted 1950 to 1980 despite being entirely vacuum tube.

BTW, the MOST-used on-off keying radio of today is NOT the amateur "CW" transmitter kind. It is the so-called "keyless" auto entry watch-fob-like handheld unit supplied with modern automobiles (the ones that go "squeep" when keyed shut or keyed open). Over a million and a half of those in the USA of today, no data on the rest of the world (which also has them).

That's the thing, we are in that cycle, but still waiting for the NPRM to
be issued. NCI hoped to short circuit this process, but failed.

Actually, both of us have the maths wrong. I meant 1927, but that's only 78
years. 1913 would be 92 years. 1927 was the year that the ITU made the
international requirement for the code test.

> I don't think so. In 1913 amateur
> radio was ALL about morse code. ARRL had its "president for

> U.S. radio regulating agency was created]
>

Not so. Not in 1927 anyway. There were a lot of people using phone back
then. AM, of course.

> The no-code-test amateur radio license advocacy began in
> the late 1970s. That grew until the FCC (in copying other

> for creation of the no-code-test Technician class. That was
> in 1990 (first two digits indicate the year) and the Report &
> Order granting the sixth license class was released in 1991.
>

The big argument began in 1927. The code test was proposed by the US
delegation to the ITU as a quid pro quo for the recognition of ham radio as
a service, and their motion was carried. The US had already had a code test
since at least 1916 that I know of, so it wasn't much of a concession for
them. Other countries did not. The UK had no code test before 1927, and
between then and the war had an 'artificial antenna' licence, whereby you
could get a licence by practicing into a dummy load for six months to still
avoid the code test.

The various ITU conferences gradually rolled back the code requirement to
below 1GHz in 1937, 420MHz in 1947, 144MHz in 1967, 30MHz in 1979 and 0 MHz
in 2003. Australia introduced a no code licence in 1952, the UK in 1963 and
the US not until 1991, after many other countries had done so. The FCC did
attempt to promote a no-code licence in the 1970s, but gave up when opposed
by the ARRL (yes, I do have that the right way around!).

About 20 countries have removed the code test since 2003. Japan already for
many years had HF for all licences including the no code 10 Watt 4th class
licence, and Spain once in the past abolished the code test, but brought it
back when their hams couldn't get reciprocal licences elsewhere.

Even in the US I know for a fact that the contoversy was very much alive in
the '70s. But 1927 was the year it really began.

I still have a pad of Smith charts. I don't have Mathcad. I have the same
attitude to this as I do to Morse, i.e. to each his own. I don't see
anything wrong in having test questions on either subject, as I think
people should know about them, I just don't think that there should be a
test on copying code by ear.

LOL, I understand. But generally, this kills the argument someone has
who is trying to lure me into a discussion I am tired of. Around
here, we have two locals each that takes the opposite extreme, One is
not to do away with ANY cw and the other is do away with all. They
are constantly trying to lure someone into the argument either to get
sympathy or to state their point.

Personally, I would vote to at least keep it on Extra. I wouldn't
mind keeping it on General and introduce a new beginner level that
authorizes limited no-code use that is still useful and fun for the
licensee.

Now Dan, you're mixing metaphors.

You're either talking about "real communicators" or you're talking
about "ham radio" ops.

Which is it?

No not at all. Let's use a workplace example instead. Many people, even if they like their jobs, do have elements of the work they don't like. However they get a reward or privilege in the form of money for performing those elements.

Actually it appears as if it IS the code that attracts young people simply
because it is different. It's the middle aged people who seem to object
most strenuously.

It would seem to have caused some pain and suffering in at least one non-code tested individual. After all, nobody was written more here about morse code tesing in amateur radio than you...and you aren't even involved in amateur radio. Poor baby.

> The major reason for any sort of "incentive" licensing was
> to create the artificiality of some being better than others.

Incentive license was put into place by the FCC. You'll remember them as the agency responsible for amateur radio licensing and enforcement. The "some being better than others" was and is quite real. Those passing more difficult theory exams and (for some classes) higher speed morse exams were rewarded with more spectrum. Those like yourself, who never passed any amateur radio licensing exams, had access to no amateur radio spectrum.

> "Upgrades" are rewarded with more status, privilege, and
> titles.

More titles? Really?

> live) because those "superiors" bought into the old ideas

> and passed those requirements.

More "Fox and the cashews" from our resident curmudgeon? Why are you worried about who might be superior to whom in amateur radio, Leonard. You aren't part of amateur radio. Even if you were, there'd always be many, regardless of license class, whose skills exceeded your own.

> Those who have passed the "mighty" tests sometimes
> assume way too much authority for themselves.

What about those who have passed none of the tests, have no amateur radio licenses and who are not FCC employees? Do they ever attempt to assume authority over amateur radio for themselves? Would you be such a fellow?

> What
> must be the peak (or perhaps nadir) of that is the market

There's more room on 10 meters compared to say 20 meters secondly I ran my information bulletin around 9.00, 10.00 pm. Finally, that would apply to anything, a station on the east coast may be on a frequency and a station on the west coast can't hear him. I think a statement in one of FCC rules books which states "we can't eliminate all interference but you can minimize it. You know unlike K1MAN and W1AW I have the curiously of NOT trying to transmit over someone.

Hey man!

Make sure you charge Woger double, he sure needs it!

Lloyd Davies,
TimeLORD

Yes, pick on me Lardass. You follow me everywhere as it is. Besides, I can
afford paying double, Lardass. Unlike your HUD apartment my inherited house
is paid for. Besides, my SSI monthly checks bring in three times more than
your pizza job does and paying double doesn't mean shit to me.
I see you are still living in your fatass imaginary world where you believe
that you are a Time Lord.
Come on over to my imaginary world, Fattie. Spend your every waking hour on
the Nim Busters board as I do. Post some filthy stuff as I do. If you would
quit working at the pizza parlor you could spend all day posting shit and
doing the shit I do. You like to post pictures on the Nim board Fatass. I
tell you I can't see them but that is a lie. I have Explorer 6.0 and I see
them but you are so stupid that you believe me.
The rest of you lispy cocksuckers can stop posting under sockpuppets. I know
for a fact that all of your Altopia posts come from Lloyd. Lloyd is
everywhere. He haunts me day in and day out. Nice try Lardass but I am wise
to your sockpuppets. Keep it up Lardass and one of these days I am gonna net
cop you to Chris Caputo. Then you'll have to eat shit and get a real job.
Get on SSI and use MSN like I do, Fatty. Every day is a weekend for me.
Buahahahahaha!

How about we just get rid of you?

25% of USENET waste would cease and we'd probably get an award from
the EPA for cleaning up the enviroment.

Putz.

The word PARIS is the standard to determine CW code speed.

If you send the word PARIS 5 times in a minute (5WPM) you have sent 250
elements (using correct spacing).

250 elements into 60 seconds per minute = 240 milliseconds per element.

ITU not FCC

And relative timing of the elements is a recommendation not a regulation.
There is a difference.

I think the problem comes from absolute beginners buying the most complex radios they can find. I've helped out several who had already made a sincere effort to understand the manuals and still couldn't get the proper results. The manuals are generally mediocre at best.

Steve,
I want to agree with you, but unfortunately, radio manuals seem to be getting more and more cryptic as the equipment is getting more complex.

I purchased the Yaesu FT-817 radio. I went through the manual several times before I thought I understood the rig. I ordered the Nifty Manual for it and learned that I misunderstood the manual. The Nifty made it more easy to understand. When I bought my IC-706 MKII, I ordered the manual thinking I would have the same problem. In this case, I didn't. The Icom manual was better at explaining how to use the features and functions of the radio. The Nifty manual is in my car in case I need to find something or if someone else needs to know how to use the rig, but compared to the Yaesu, the Icom was much more logically laid out and had much better instructions.

I know that this is only one example, but if someone working for Nifty were asked, I am sure they would tell you that they are making a pretty good profit just clarifying radio manuals.

Buck

Well that example proves the point that you don't know what you may need or want in the future as secretaries are now going the way of the dodo bird in large part. Almost all employees that have a need to do correspondence do their own these days in any company that I have been in. The company I work for right now let their last secretary go about four years ago.

He's already stated several times that he meant the "just did it" to apply to getting a ham license. So why do you have to keep berating the guy? We all make mistakes in sentence structure that lead to unintended meanings. Let it go already.

Yeah - most of those who remain have now been retitled as "program
assistants". Some are decent administrators, and some are still
go-fers......

One exception is my daughter-in-law's mother. She's the secretary
to the senior named partner of the biggest law firm in the Pacific
Northwest, and still does the correspondence typing. Of course, her
boss is nearly 90 years old, but still sharp as a tack, I understand.

I like that one (smile). It would keep out a couple of bad eggs that I know about. However, the problem is that we will all reach that "maximum age" if the Lord is willing.

> When they do repeal the code test, we will all have to nag Len to get a
> licence, as he will have no excuse

Len really has no excuse now. He has had the no code option available to him for a long, long time now. He has told us on a number of occasions that HF access has little importance and that all the action is on the VHF/UHF bands. He could have been there for years with no morse testing as an excuse. He hasn't overcome inertia.

When and if morse code testing is removed as part of the process in getting an amateur radio license in the U.S., there are just a few "Len" scenarios. Leonard could make good on his "Extra right out of the box" if we redefine the word "right". Len could continue to do nothing about obtaining an amateur radio license (my guess as a likely scenario). Len might have to take up an entirely new self-appointment as advocate for something else in which he is not involved. He might even take up a different area of amateur radio in which to be a bystander. He is already priming the pump in rec.radio.amateur.homebrew where he has recently entertained the troops.

I understand that Len is already eyeing the British Monarchy as a target for future rants. He has discoverd that the royals have rank, status, privilege and TITLES. They have a church with a number of parishes called Saint-something. They and their supports are conservative traditionalists. The entire British Isles are loaded with lodge halls repleat with rules for keeping out the riff-raff.

I'm a VE. Is there some way we could arrange to send three VEs around to
his house when the code test is repealed? We would announce it in advance
of course, to comply with all the rules, on here naturally.

It might have seemed that way to you. It isn't evidenced below. In
fact,
someone else suggested it:

In article <fhs9b.16269$NM1.7...@newsread2.news.atl.earthlink.net>,
"Bill Sohl"

<bills...@mindspring.com> writes:
>"N2EY" <n...@aol.com> wrote in message
>news:20030915021846.23171.00000765@mb-m05.aol.com...
>> In article <vm9usff4mpm...@corp.supernews.com>, "Clint"
>> <rattlehead@computronDOTnet> writes:

>> >sending and receiving CW isn't a building block
>> >to anything else.....

>> Yes, it is.

>> First, it's a building block to the use of the mode on the air.

>Come on Jim. that's a self fullfilling argument.

It's a plain and simple fact.

> My point, and I know
>you know this, is that morse knowledge is not needed in any manner as
>a foundation, stepping stone, or whatever to any body or radio
knowledge
>or concepts.

It's not an *absolute* need. But it is a big help for amateurs who want
to
learn about radio. That's my point.

>> Although other
>> services have pretty much stopped using Morse Code, hams use it
>> extensivley,
>> and an amateur license is permission to operate an amateur station,
not a
>> station in another service. Note that the Morse Code tests are at a
very
>> basic level. They're entry-level, nothing more.

>Are you afraid that without a code test, people will "pollute the HF
>airwaves" with bad morse?

Nope, not at all.

>> Second, if someone wants to actually design and build radio
equipment,
>> having
>> skill in Morse Code permits them to use almost anything from very
simple
>> to
>> very sophisticated equipment to good advantage. Would you expect a
>> newcomer to
>> radio to build an SSB transceiver as a first project?

>They can build whatever they want.

Doesn't answer the question.

>If they want to start with a simple
>morse
>Xmitter then they will learn at least enough morse to be able to use
it.
>If they don't self train themselves, the rig will be useless to them.
As
>another
>point of reference, when I was going for my AAS in electricl
technology we
>built a 10 watt CW rig as part of the lab work. We tested it using a
dummy
>load and no one had to know even one character of morse to do the lab

work.

And without Morse skill, that project had no practical use once the lab
was
over. With Morse skill, it could have been a very useful transmitter.

There's a big difference between a lab experiment that is done purely
as a
learning tool, and a practical project that not only helps someone
learn *and*
results in a useful radio device.

>> >now, the electrical principals of what a CW
>> >transmission is, and a knowledge test of that is a good idea, but
>> >that's comparing apples and oranges.

>> Why should there be *any* written test on theory if all a person
wants to
>> do is
>> operate manufactured radios? If someone doesn't want to build a rig,
why
>> should
>> they have to memorize all those symbols, diagrams and formulas?

>IF that's what you believe then go start NTI (No Theory Int'l).

I'm asking a question. *All* license requirements have to justify
themselves,
don't they? Or is that only true for Morse code tests?

>> >I think most of the PCTA
>> >is being disingenuous when they come up with "good reasons"
>> >to keep CW testing alive;

>> Why?

>Actually, they haven't scored even a single point in the arguments
>made to the FCC now or in the past.

Has nothing to do with "disingenous".

>> > I think the true deeper reason lies
>> >somewhere in the "I had to do it so everybody should" relm,
>> >as i've stated before.

>> You can think what you want, but you're mistaken on that account.

>Exactly what is it that the PCTAs fear if there is NO morse test
>at all?

I don't "fear" anything from code test removal. My *concern* is the
continuing
downward trend in requirements and qualifications.

73 de Jim, N2EY.

It isn't here, though someone else mentions it:

In article <3F0AC3F9....@psu.edu>, Mike Coslo <m...@psu.edu> writes:
> Actually as a point of interest, and maybe a little trolling, Just
WHY
>should there be testing for a ham license?

Because we already know what happens with no testing.

> Isn't limiting access to the Airwaves to only those who pass some
kind
>of test Elitist?

Nope.

> What of those who simply aren't smart enough to pass a test? are
they
>not human and have rights?

Everyone has the right to take the test. Nobody has the right to a
guaranteed
pass on the test.

> As for RF safety, I would point to the successful efforts of
Motorcycle
>riders to abolish helmet rules. It should be the individual's
>responsibility to decide if RF safety matters are important to him or
her.

Actually, that makes sense IF the effects can be contained to just the
person
making the decision. But that's rarely the case.

> As for mode specific questions, they have no business asking me
about
>modes of operation that I am not interested in.

I learned about televison screen aspect ratio and interlaced scanning
because
it was in the Extra study guide back when. I've never operated ATV.

> No Test International could be born now!

> Thoughts?

See my rant on replacing the code test with a Smith Chart test.

73 de Jim, N2EY

I think that perhaps you're mistaken. Perhaps you can come up with a
statement by Jim advocating such.

. . "Test questions on Morse"? . . "People should know about Morse"?
How many WPM izzat??

You obviously didn't spend much time cruising the link I posted. You
don't have to have Mathcad to solve transmission line problems to get
away from the primitive paper and pencil nonsense. There are freely
available Excel and Java routines which will do the job too.

Mathcad . . ah, yes . . If you do any engineering math which gets
complicated in Excel you need Mathcad Alun. I've been using it for
about ten years and it's become absolutely indispensible. Maybe only a
half hour after I first loaded and fired Mathcad up those ten years
ago and started messing with it I was running rapid-fire "what-if's" on
a double integral I'd dreamed up as an exercise. Very intuitive.
Otherwise I wouldn't be able to run it. Heh.

'Tis an incredible solver which has saved me hundreds of hours of grunt
number crunching (and curve plotting BS) labor both on and off the job.
Don't believe the prices for it you see floating around the Web. My
latest iteration is v.2000 Pro ($800) which I bought in a

shrink-wrapped package for $65 at a local computer show after it was one version outdated.

>international requirement for the code test.

The first U.S. radio regulating agency came into being in 1912.
There's been a small controvery in here about the first code
test for amateurs in here, others saying the code test began
a year after that agency was created.

2003 is the year in which the ITU revised most of S25, eliminating
the artificial requirement of morsemanship for an amateur radio
license having below-30-MHz privileges. That's a 76-year span
from 1927. Radio as a communications medium is only 108 years
old.

>> I don't think so. In 1913 amateur

>> U.S. radio regulating agency was created]
>
>Not so. Not in 1927 anyway. There were a lot of people using phone
back
>then. AM, of course.

In 1912, between 1909 (when the Radio Club of America started)
and 1912, morse code was about the ONLY way to communicate
on early radio. ARRL wasn't formed until 1914...as a local New
England radio club of 3 members...with Maxim as the leader who
thought it a neat idea to (virtually) "hack" the commercial telegram
services using their spark radios. :-)

In 1912 NOBODY was using the Reggie Fessenden AM system
of putting microphones in series with the antenna lead-in. :-)

I won't argue the CCITT "arguments" back in 1927. As you said,
the USA already had a morse code test then. The ARRL was
already 13 years old and on the ascendency, although NOT yet
the big "leader" in national amateur representation. Not yet
despite Maxim Going To Washington (!) to "restore ham radio"
from its WW1 shut-down. The Thomas H. White early USA
radio regulation history on the web has all of the early gory
details on that, several items the ARRL won't repeat about
themselves.

>The various ITU conferences gradually rolled back the code requirement
to
>below 1GHz in 1937, 420MHz in 1947, 144MHz in 1967, 30MHz in 1979 and
0 MHz
>in 2003. Australia introduced a no code licence in 1952, the UK in
1963 and
>the US not until 1991, after many other countries had done so. The FCC
did
>attempt to promote a no-code licence in the 1970s, but gave up when
opposed
>by the ARRL (yes, I do have that the right way around!).

I'm familiar with what the ARRL did on lobbying the FCC to make
the regulations "their way." :-)

Problem is, lots of League "Believers" get outraged whenever
someone points out their clay feet.

>About 20 countries have removed the code test since 2003. Japan
already for
>many years had HF for all licences including the no code 10 Watt 4th
class
>licence, and Spain once in the past abolished the code test, but
brought it
>back when their hams couldn't get reciprocal licences elsewhere.
>
>Even in the US I know for a fact that the contoversy was very much
alive in
>the '70s. But 1927 was the year it really began.

The turn-down of a no-code license by the FCC in the 1970s
pretty much quashed my interest in U.S. amateur radio (along
with thousands of others). The first personal computer kits of
1975-1976 steered my interests away from radio (also done
by thousands of others). That was the blazing of a new path
leading to the future, not the recreation of what others have done
in copying the pioneers of the airwaves back in the past.

1927 may have been the international year of controversy but
in the USA the code test has been there since the first U.S.
radio regulating agency...92 years of the 108-year-old
existance of radio.

>Funny thing isn't it, ye olde tymmers in a relatively high tech hobby?
It's
>a good thing spark isn't still legal!

If so, the ham magazines would have ads for computer controlled,
software-defined SPARK transceivers! :-) The olde-tymers
would be bragging up a storm of arcs and sparks, using knife
switches and using point-to-point wiring (all with flexible coils on
them) with polished woodcraft bases gleaming in candlelight.

If you check out the ARRL website you will see that QST is
starting a "new feature" of explaining what all those knobs on
the front panels are doing to the readership. Good grief, what
is a "high tech hobby" coming to?!?!?

It apparently has boiled down to the League's editors that most
of their membership are a bunch of technical ignorants who
never learned anything beyond being whoopee-wonderful
morsemen. Rather disgusting when they make like "superior"
beings because they passed a high-rate morse test once.

Wow, an extra license that even a 9-year-old can pass! Lots
of "incentive" to "join the amateur brotherhood" by learning
morse code (and be just like a 9-year-old).

It's worse when some insufferable, self-righteous "mama"
wants to "discipline children as parents do" in here.

They were trying to get administrative action, i.e. no petitions, no NPRM,
just have the FCC remove the requirement. Not surprisingly, they failed.
Now we have 19 petitions and a long wait for an NPRM

You're right, I didn't notice that there was a Java routine and an Excel spreadsheet.

I'm a patent agent these days. I may write patent applications for communications systems that have complex equations in them, but that's about as close as I get to having to solve mathematical problems, except in the hobby of course.

Smith charts are actually most useful for designing stubs. I suppose I could design a stub match for a beam using a Smith chart if I felt so inclined, I know how to do it, but 9/10 of hams only follow someone else's published designs, or they might adjust the stub or other matching circuit by trial and error.

For this reason I'm actually not sure of the value of testing hams on Smith charts, but I felt pretty sure I had seen a question on them in the pool?

But it is the FCC, not the ITU, that denies people access to HF based upon absolutely nothing in their own regulations except a reference to a superceded ITU document. Hi!

Then the ARRL and other VEC's decided to not (use correct spacing) in the word PARIS.

Sounds to me like the FCC doesn't have its act together, and the inmates are in charge of the asylum.

Dee, thank you. Rather than just regurging ARRL-speak, you just stated
something obvious and still true.

You make my point.

The think with which we deny people access to HF with is merely a
suggestion.

It is a technique I learned from Robeson. Why is it that no one
complains when Robeson uses it?

We
> all make mistakes in sentence structure that lead to unintended
meanings.

Yes. And in RRAP, David can play stupid all day long and keep on with
that unintended meaning. So why can't other people?

> Let it go already.
>
> Dee D. Flint, N8UZE

When I'm ready. If I see Heil making any future references to anything
"out of the box," you'll likely see it brought up again.

>

And we all use word processor software to do that writing. Cut
and paste, fix spelling errors, rewrite something that was weak,
and such. Back in the olden days secretaries took care of
typing stuff onto paper without error. Today we write on computers,
edit and whatnot, and once we have it the way we want it, send
the file to the printer. One pretty much had to do that
via longhand on paper notepads that would then be given to
the secretary to type up. She would fix the spelling errors
and some of the grammar and hopefully not munge the concepts.
And if that did happen we'd have to get that part retyped.
Took forever.

There are technical writers who rewrite engineer writing
into something hopefully better written. But the engineer
has to review it to be sure that the meaning didn't get
munged.

RE Nifty Acc

Well by the time you deduct advertising costs, check magazines for rates -- outta sight.

Invest several thousand dollars for a color laser printer and lamininating equipment.

Spend coupla hundred bucks for a Ham convention booth, hotel and travel, and then pay income tax and credit card fees -- I suspect the good profit you spoke ain't what you might think.

Been there done that

Most hams would rather talk on the radio than take a shower.
It was a real B.O. stench at Dayton last year. Most guys look
like they had not shaved or bathed in six months.

Phil, with some of the AMERICAN trained RF folks I've worked with, the Smith Chart presentation on paper or on the display screens of various RF instruments is an indispensable tool for quickly observing both narrow- and wideband behavior of RF structures.

Ohm's Law of Resistance is universally accepted in the radio and electronics community worldwide...but there are some huge exceptions with "foreign" concepts such as the Smith Chart. Olde-tyme hammes haven't a clue on what the wonderful chart tells them nor can they see the relationship between complex quantities nor understand "normalization" of impedance. Something involving algebra of three or more quantities is apparently "rocket science" to them. <shrug>

I could do complex quantity calculations on my little AMERICAN-made HP-25 and HP-67 pocket calculators (made in HP's old plant in Oregon) and can still do them on the Singapore-constructed HP 32S II (but designed by HP) I have now. A few keystrokes is all. No "special education" in Russia or any other foreign country needed to do that. No PC is needed either, such as finding a "calculator" Java script thing to find reactance at a frequency (I can't believe some folks never progressed far enough in self-education to learn the simple formulas for reactance...or are afraid to learn and apply them).

If the Coslonaut thinks Smith Charts are obsolete then, in this newsgroup, he will be "correct." In here the PCTA extras are always right, anyone against them hate ham radio and are always wrong. Rules of the Court as it were.

That's one of those PCTA Double Standards, isn't it?

Dave Heil wanted a LONG time ago to boast in here of his
State Department experience with CW in the 80s in Africa.
Poor guy got trumped by at least two others with MORE
HF experience than his State stuff (I was one of them).
Dave hasn't forgotten that. He's cussed and diss-cussed
anyone who stands up to his "superior" attitude in here.

Dave is a PCTA extra. He can do no wrong.

ANYONE who talks back to a PCTA extra is evil, right?

It's even worse when someone comes along who has NO
amateur radio license! God forbid those lowly heathen
should be present in the superior royalty of the PCTA
extras!

Dee, why don't you form a committee or something and go
to the newsgroup rulers (through Paul Schleck, probably)
and DEMAND EXCLISIVITY on all who enter this sacred
place where ONLY licensed hams can come and not be
bothered with horrifying reality of the rest of the world?

What IS the point of all that?

All those who demand EXCLUSIVITY on entrance to this newsgroup
can do so to the proper authorities. Paul Schleck will have the
procedure. RESTRICTING access will be wonderful for all those
who want to lock out all but "their kind" (I should spell
that "thier" in their honor but won't) and they won't suffer
all the outrage of seeing the reality of the rest of the radio
world when they are called wrong. Just think, their own
"clubhouse" where others can't be admitted (nyah, nyah).

Keep everything SECRET, "hams-eyes-only" stuff. Nobody else
can or should know anything.

Tsk.

Years ago, poor Dave wanted to bluster and brag about his really
neat CW on State Department radio in Africa during the '80s. He
made it sound like a major diplomatic save-the-world kind of thing,
even mentioned being in "Guinea-Bisseau" one of those litle-
known and who-cares kind of ex-colonies. He wanted to parade
like a Big Shot using CW for some kind of vital mission when,
supposedly, RTTY wouldn't get through. [spell Shot with an i]

Poor Dave got trumped. He ran into someone who had bigger
experience in government communications that didn't need to
brag. Dave tried and tried to beat that guy down, by any means
possible. He was the "superior!" He ruled. All bow down to
him and all that sort of rot. Dave never forgot.

Now Dave insists on rewriting the past, of saying I wrote one
thing but "really wanted" something different. He has stretched
that to include "topics I will discuss in the future!" Amazing.

So, by all means, have three VEs come to my house when the
code test is eliminated. Hopefully they will come from the east
coast first-class, paying their own way. My address is on my
old Ham Radio Magazine bylines, hasn't changed. ["three
wiseguys out of the east," so to speak]

So, what are those three wisemen, er, VEs going to do?

Administer a TEST whether I want to take one or not? I don't
think so. My representative Mr. Glock will address them in
that case. [he is very accurate]

The three VEs can wait at the curb. If they behave, I might
invite them to the back patio for milk and cookies. Or not.

Now, if EXCLUSIVITY is so very desireable, feel free to try for
private access-by-permission only. That will insulate all the
participants in their "clubhouse" and they can cuss out all
on the outside without being hurt in the process. They know
it all anyway and don't need "outsider" information. They are
"superior!"

Yes a definite solution to the
dreaded,

ancient,

out-dated,

miserable,

Morse

code

test.

No more dinosaur communications

And you won't even hear any ditty dah dits

Oh no - not VHF,

but a great HF band

Anyone can get this privilege with no code

All ages

In fact anyone can get this privilege without any kind of test.

Equipment is very inexpensive

Fanfare Music ba dah

It is called the Citizen's Band

Your frequency allotment is

26.965 to 27.405 MHz

10-39 ya all

Thirds I'm 10-8

Welfare Willy

Dee, do not read more into Part 97 than is there. Morse Code is not defined in Part 97, but Part 97 allows surrogate examiners to deny people access to HF. They do it every day and don't know why.

Once again you assume more than is there. I said nothing in this thread about Part 97 defining the code. Nor have I said anything in this thread about examination methods.

That is a deliberate falsehood on your part, Leonard. I pointed out
that
morse was in use by the U.S. Department of State at a time when you
claimed that government was not using it. There was no boast to it.

> Poor guy got trumped by at least two others with MORE
> HF experience than his State stuff (I was one of them).

I was trumped by no one, certainly not by you. There is no evidence at
all that you have MORE HF experience than I, unless you want to include
your Citizens Band operation. Now about this other fellow you claim
"trumped" me. Who might he have been?

You want to tread very carefully on this one or I see a sound googling
in your future.

> Dave hasn't forgotten that.

No, I haven't. That's why I'm calling you on it here and now.

> He's cussed and diss-cussed
> anyone who stands up to his "superior" attitude in here.

If, by anyone, you mean yourself, you are correct.

Heck, Len, hams already have a place to take it where they won't have to
be bothered with you--the ham bands. It was done once and you howled at
the moon over it.

And once again you think you can jump into a thread about what's not in
Part 97 and think it's not germane to Part 97.

Hams already have such a place and the authorities support it. You
can't be admitted.

> Keep everything SECRET, "hams-eyes-only" stuff. Nobody else
> can or should know anything.

If we use morse, it'll certainly be a secret from you.

> Tsk.
>
> Years ago, poor Dave wanted to bluster and brag about his really
> neat CW on State Department radio in Africa during the '80s.

No bluster and brag to it, disingenuous old boy, just statements of
fact.
You to humbrage to the facts. You still do. Tough.

> He
> made it sound like a major diplomatic save-the-world kind of thing,
> even mentioned being in "Guinea-Bisseau" one of those litle-
> known and who-cares kind of ex-colonies.

I just have to ask--what does mentioning that it took place in
Guinea-Bissau have to do with making something sound like a
"save-the-world kind of thing"? Now, knowing that all of the material
is archived at Google, is there anything you'd like to amend about your
claim?

> He wanted to parade
> like a Big Shot using CW for some kind of vital mission when,
> supposedly, RTTY wouldn't get through. [spell Shot with an i]

Any amendments at all? Otherwise, Steve's frequent claim that you are a
liar is about to wham you in the can again. I can provide an accurate
account of what I wrote and what you wrote.

> Poor Dave got trumped.

...not by you, I didn't.

> He ran into someone who had bigger
> experience in government communications that didn't need to
> brag.

Now I know that we're not talking about you. You have less experience
and you've posted endless accounts of your past exploits.

> Dave tried and tried to beat that guy down, by any means
> possible. He was the "superior!" He ruled. All bow down to
> him and all that sort of rot. Dave never forgot.

No, he never forgot and he's about to display your comments of the time
so that all can see what a fabricator you are.

> Now Dave insists on rewriting the past, of saying I wrote one
> thing but "really wanted" something different.

Rewriting, Leonard? What was rewritten?

> He has stretched
> that to include "topics I will discuss in the future!" Amazing.

Buy a sense of humor, Leonard.

OK, you've explained that before but I forgot what you're doing to earn your daily bread. It's the guys developing the systems who need to crunch the numbers, not thee. I've gone off on a couple career tangents over the years and got into the marketing and sales game and went for several spells in which I seldom even needed a handheld calculator. But in the past 15 years I've been almost 100% back to the design and build end of the biz and much of it has involved some fairly serious analytical work. Otherwise I probably wouldn't have bothered with Mathcad. Now that I'm semi-retired and just sniping a project here and there I've acquired a whole collection of design tools like Mathcad, CAD and some bits and pieces of structural design FEA I can really focus on hobby sorts of things.

Agreed. I've been pecking at HF wire antenna modeling via Nec Win Plus and am getting all sorts of two-decimal-place accuracy results which I

bloody well know from experience are probably at least 3-5% off one way or another. Back to the diagonal cutters & soldering gun . . as usual.

> For this reason I'm actually not sure of the value of testing hams on Smith
> charts, but I felt pretty sure I had seen a question on them in the pool?

Beats me, I haven't spent much time poking around the pools. I don't see the point to testing for "Smith chart operations"any more than I see the point to test questions on using sliderule log scales to calculate decibles up/down. Based on some of the absolutely idiotic posts about antenna matching issues by duly licensed individuals I've seen in other venues indicate to me that if nothing else more test questions on transmission line theory and practice need to be "loaded" into the QPs.

Source record: 103650

Hello, Steve

To be entirely fair, I think we should put both newcomers and old timers on an equal footing. Even the no Morse folks.

So, here is my proposal:

For the next year, everything stays the same. After that, it will be a 13 word per minute exam in *American* land-line Morse. This is not international Morse, so everyone has to learn it from scratch (well, almost everyone LOL). An option would be to take it at 5 words per minute, but with variable length dashes and spacing .... it might prove interesting.

This would not only make everyone equal, it would be more difficult to write a computer program that could copy it reliably ... especially hand sent.

For the extra, the person would have to demonstrate proficiency by QLF (sending with the left foot).

Len, your thoughts?

Best regards from Rochester, NY

True, but the one thing you missed is that they order their laminated
pages pre-printed and cut. The idea is still true, there is a real
demand for many of their products.

I know what you mean though. 'there is no such thing as a free lunch'

Buck

Hello, Steve

I'll be honest; I hate most modern controls. Whether radios or tv remote controls, the buttons are small (not great for us folks with bifulcrums) and usually multi-function.

I'd prefer two readouts - one for transmit frequency, one for receive, and *two* different full size knobs to tune them. I hate it when you have to press a "function" key with one finger, another key with a different finger, and then take your shoes off to free up a couple of toes to access some stupid function that might better be available with its' own control (perhaps on the back of the rig if it is seldom used).

Oh well .... getting old beats the heck out of the alternative, I guess :))

Oh, bullshit, big bad Dave. You were crowing, you were boasting.

State Department isn't THE government...they only think so.

Grow up. State Department doesn't operate like amateurs.

Ooops, maybe they do...American foreign policy is NOT
universally loved!

Sunnuvagun!

>> Poor guy got trumped by at least two others with MORE
>> HF experience than his State stuff (I was one of them).
>
>I was trumped by no one, certainly not by you.

Big badass Dave is "superior," NEVER trumped. No sir! :-)

>There is no evidence at
>all that you have MORE HF experience than I, unless you want to
include
>your Citizens Band operation.

Tsk, tsk, tsk. A long time ago I accumulated enough "HF
experience" while in the U.S. Army doing nothing but communications
for an Area Command. The military IS considered part of the U.S.
government...or was, last I heard. Class D CB wasn't yet approved
in
the USA when I finished active duty. [Class D and C Citizens Band
are on HF, or weren't you sure about that?]

>You want to tread very carefully on this one or I see a sound googling
>in your future.

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!!!!!!!!

"Sound googling!" BWHAAHAHAHAHHAHHHAAAAAAA!!!!!!!!!!!!!!!!

Big badass Dave, you've got some kind of "spanking" fetish? :-)

Go join Mama Dee who wants to "punish" her "children" that don't
do what they're told!

>> Dave hasn't forgotten that.
>
>No, I haven't. That's why I'm calling you on it here and now.

Oh, WOW! I'm being "called out!!!" :-)

Big badass Dave wants to FIGHT! Tsk, tsk, tsk, tsk......

"Moot Court" with Judge Dave Bean on the Bench!
Gonna be a BIG thing on Google quotes? Gonna waste
lots of space in here with your "protests" and "charges?"
Go for it. Others won't like it and I don't give a damn. :-)

You just get three VEs and come on over. You have the
address. You'll have to wait at the curb and be nice, though.

Showing your big shiny Raddio Kopp shield in its little wallet
isn't going to help. LAPD frowns on FAKE AUTHORITY
showing shields...but Mr. Glock likes it...it's nice and shiny...

>> He's cussed and diss-cussed
>> anyone who stands up to his "superior" attitude in here.
>
>If, by anyone, you mean yourself, you are correct.

Big badass Dave...your posturing and preening and bragging is also
archived on Google. :-) :-) :-)

>> Dee, why don't you form a committee or something and go
>> to the newsgroup rulers (through Paul Schleck, probably)
>> and DEMAND EXCLISIVITY on all who enter this sacred
>> place where ONLY licensed hams can come and not be

>
>Heck, Len, hams already have a place to take it where they won't have
to
>be bothered with you--the ham bands. It was done once and you howled
at
>the moon over it.

Big badass Dave, you got a Cross-Dressing thing going? You
are NOT our gal parent, Dee Flint. :-)

Like I said to you, like I said to Dee, if you want a PRIVATE chat room open ONLY to those you let in, you are as free as a bird (ostrisch most likely) to organize one. In the meantime, THIS newsgroup is still PUBLIC. Anyone who has access to the internet can come in here.

You can single out individual people ALL you want, quote from Google ALL you want. That's just harrassment that makes others tired of you even more. But, if you feel so "outraged" and "insulted" at not being considered a big badass "superior" radio god, go for it. Your great big wonderful extra license doesn't make you chief of Who Can Post Here.

Why ARE you here? All you seem to do is hit on NCTAs who aren't bullied by you, who challenge your "authority" and who have differing OPINIONS than your royal worshipness has. Offhand, I'd say you are doing a sociopath thing plus overtones of trying to BULLY others, to push them around. Not a good attitude. Did your State Department experience teach you such when you got lessons in diplomacy?

God help the United States of America if your brand of "diplomacy" is any indication of what State Department does! I'm glad Colin resigned!

Best regards,

LenAnderson@ieee.org

If this were true (only three states), then there are only two letters, E and T, as one cannot tell the difference between the end of a letter and the end of a mark. IT is obvious that your view fails.

I could accept that, but sufficiently fast telegraphy will actually end up dropping the inter-word spacing, thus devolving into four states.

Regardless, there are two things being varied: The mark/space condition, and the duration of each, so there is no way that morse code can be binary.

What a putz.

He wants a "Morse Code Exam Debate Thread", get's it hand
delivered to him, then snivvels out from any true discussion on the
topic.

Nothing we haven't come to expect, I guess. Lennie doesn't have
the cajones to "debate" any issue head on. Never could.

> Best regards,

You've never had "best regards" for anyone...Yourself included,
Lennie. Only a person with an overwhelming lack of self respect could
act the way you do in public.

Sure it can.

But the REAL question is how can we blame it on Bill Pasternak and threaten to sue him over it.....?!?!

Hmmmmmmmmm...Who would that be, Lennie?

It's sure not you. According to your own "CV", you've never been CHOP of ANY government communications facility. You weren't even a military radio operator while you were in the Army...Just a radio mechanic.

> Dave tried and tried to beat that guy down, by any means
> possible. He was the "superior!" He ruled. All bow down to
> him and all that sort of rot. Dave never forgot.

Forgot what?

No one's ever "beat (him) down", nor has Dave tried to beat anyone else down.

He has, of course, repeatedly humiliated you, but then you keep supplying us with the tools with which to do it....

> Now Dave insists on rewriting the past, of saying I wrote one
> thing but "really wanted" something different. He has stretched
> that to include "topics I will discuss in the future!" Amazing.

Coming from a guy who has tried to embellish his military service with the sacrifices of guys who were KIA 3 years before he even enlisted, I find your insinuation that anyone else is trying to "rewrit(e) the past" to be morbidly offensive....Not that you care, of course.

> So, by all means, have three VEs come to my house when the

Anybody know the story behind this guy near KC and the interstate
who has been openly advertising and selling imported CB amps. and
non type-approved foreign transceivers? The local hams have been
throwing fits because they guy is explointing some loophole in the law.
A KC ham says the guy must be doing at least $40,000 in sales daily,
since last year.

> It's quite whimsical,

I'll take that to mean "funny". Thanks!

>but hardly really comparable with CW.

In some ways I agree. The use of Morse Code/CW in amateur radio is far more common than the use of the Smith Chart, mostly because most hams spend more time operating than designing.

And the Smith Chart is hardly a necessity for RF work. As W3RV points out, there are many software tools which do the job better and faster. The Smith Chart's ingenious graphicality was whiz-bang stuff in its time - just like the old ARRL Lightning Calculators. And Morse Code. All are still useful today. But make no mistake, they're *OLD* methods - all of them.

But if a Smith Chart skill test *were* substituted for the Morse Code test, you can bet that the same sort of debate would arise, and for exactly the same reasons.

> I would be
> happy with just theory tests where both the Smith chart and CW were
in the
> question pool.

I suspect many would agree. I don't.

> If there had to be a skill test it ought to involve
> soldering and/or putting on a PL 259, IMHO, but I don't think even
those
> things as essential, in fact for my money you could just put those
things
> in the theory test too.

Why are they needed? PL-259s aren't needed to build a ham station - I know many hams who avoid PL-259s like the plague, preferring type N and BNC for their superior RF and waterproof characteristics.

There are also solderless PL-259 equivalents.

> When it comes to doing them, people learn quickly
> enough.

Some people do. Others don't even have the sense to file the nickel plating off before soldering, or to buy silverplated connectors.

Point is, *any* test of skill is going to raise the hackles of some folks.

How so? It's simply an option.

> The test should either be or not be. Not
> some kind of bonus that allows you to be less technically proficient.

Then why require more technical knowledge for an Extra? That license
does not
allow the holder to use any more modes, power, or bands than a General.
Just a few additional slices of spectrum.

I don't see *any* license class "dropping like flies". Check the AH0A
data on renewals - thousands of Techs are renewing every month, either
before the license runs out or in the grace period.

Note that almost 5 years after the 200 restructuring we still retain
more than 50% of Novices and 75% of Advanceds.

> Theirs is a failed and incorrect paradigm.

Maybe. The concept of "lowered entry requirements = sustained growth"
just hasn't happened in the ARS.
>

The same is true of ordinary house current.

And it's not just voltage. Get a metal ring a high current supply and
the results aren't pretty. If the ring is on your finger.....

Yet the NCVEC folks say the solution is to create a class of ham that
can't use rigs with more than 30 volts on the electronics...

> RF Safety should be the FIRST order of the day, and NO one should be
a
> Ham until they are tested for RF safety to the ability to handle full

> legal limit.

Why? We don't test people on gasoline-handling safety, nor ladder
safety, nor many other things that injure thousands of Americans every
year.

I agree that every ham should be safety-aware. But a true test of
safety would be far more extensive than even the Extra writtens.

Of course!

It's the classic case of a red herring diversion. Blame the code test
for everyhting bad while the real problems are not addressed.

It depends what you mean. Will repealing the code test provide a vast increase in numbers? No. Will it provide some increase? Yes. Are there thousands of hams that could pass the General or Extra theory trapped above 30 MHz? Yes. Will there be a large increase in HF use? Yes.

No dipshit I meant KY-7. And I was not discussing modern crypto equipment. Apparantly you are. Thus we have nothing to say to each other....which btw is usual. I don't know why I bother with you Len the loon, oh I remember now. I had to scratch my butt and your name came up.

True. It would probably not fly either in the land of entitlements.

Would it be reciprocal? If you did well on the writtens, would they
allow a poor performance on the Code test?

Bad question to ask me, since I would prefer more privilege differences
between General and Extra (Len will no doubt have interesting comments
on that one)

Someone suggested some short commercial spots on time. I wonder if that
has ever been done. Nothing too elaborate, just getting the name out there.

Sure. Fortunately most of the public is well educated from a young age
that what comes out of the wall socket can be a bad thing.

> And it's not just voltage. Get a metal ring a high current supply and
> the results aren't pretty. If the ring is on your finger.....

Years ago I used to work on a lot of digital electronics that used
massive power supplies at 5 volts. No rings, no metallic glasses (you
should have seen my NASANerd plastic rim safety glasses!) and no metal
belt buckles, no change in the pocket, etc, etc.

> Yet the NCVEC folks say the solution is to create a class of ham that
> can't use rigs with more than 30 volts on the electronics...

Goofy, goofy, goofy!

And it is the wrong approach. The proper approach is to allow access
coupled with adequate education.

>
>>RF Safety should be the FIRST order of the day, and NO one should be

Familiarity breeds contempt, Jim. If gasoline were "introduced today,
the infrastructure for handling it would be mind boggling. And ladder
makers carry huge liability policies. (I had the experience of having a
defective design ladder collapse under me).

> I agree that every ham should be safety-aware. But a true test of

In some cases. When the licensing requirement encompasses the nation,
then so do the responsibilities.

How are people "trapped" above 30 MHz? When I was limited in that
manner, I could take a test and have full access?

In addition I would note that many of the No-coded Tech's are perfectly
happy to be where they are at. How many that is overall, I don't know,
but it's conjecture, same as yours.

All of our discussion of how many new HF qualified Hams will show up
due to a presumed elimination of the Morse code test is a bit of a red
herring in itself.

Is it a good thing to have more new Hams? Most people would agree.

Is it a good thing to reduce qualifications to get new Hams?

Probably somewhat less agreement.

What has our experience with uncoded licensees been?

I'd say generally good, but I am concerned about retention.

What has happened in other countries in which no code has been needed
for HF access?

I'd have to say that even the idea of trying to argue about it from an
HF/VHF access view is a red herring too.

Seems like we should be trying to ensure that New Hams remain Hams. Is
HF access the secret? I doubt it. HF is in general more difficult to set
up for and to operate.

><shrug>

Of course it is fabricated in Indonesia. That's molded into the
back of the HP 32S II case. :-)

WHERE it was put together shouldn't matter, or should it?

Do you think the internal ROM has "different" constants loaded into it just because of the distance between Indonesia and Singapore? And WHICH part of Indonesia are you (apparently) rooting for? [Singapore is a city-state on the SE tip of the Malaysian penninsula, not far from Kuala Lumpur, easily located...but Indonesia is several islands farther east and south] My HP 32 was assembled in 1987...perhaps you are going to argue that it gives "old" answers? :-)

You got caught in simple entrapment. :-) The only contest was WHICH PCTA extra would start shouting and hollering about ERRORS! MISTAKES! EVIL! :-) You beat the others which were bound to jump in and do the personal criticism bit with overtones of "he isn't worthy of being IN here with us 'superior' PCTA extras!." :-)

OK, big calculating guy expert, where was/is the HP scientific calculator complex? [Phil Kane should know] When did the first scientific pocket calculator appear? What preceded it out of HP, the old HP? Was Kellie's name on programs in the HP programmable calculator program library?

Irrelevant, you say? Of course it is in here...just as your "correction" of where an HP 32S calculator is put together. But that doesn't stop you going on some Philly Snipe Hunt in here, does it? :-)

One excellent upgrade that HP did after the 67/97 series was to add in COMPLEX quantity handling. Two numbers, the Real and Imaginary parts, can be handled as it one (scalar) number for the four functions. For impedance/ admittance calculations that is very very handy. Of course one has to know what the formulas ARE in order to use them...and to have the measuring equipment to supply those numbers for calculation. One doesn't need to go to Russia to "learn" those formulas. :-)

>there I've acquired a whole collection of design tools like Mathcad,
>CAD and some bits and pieces of structural design FEA I can really
>focus on hobby sorts of things.

Tsk, tsk. Just a few short years ago Kellie was bitching and
moaning about "Computers" being "useless!" :-)

>Agreed. I've been pecking at HF wire antenna modeling via Nec Win Plus
>and am getting all sorts of two-decimal-place accuracy results which I
>bloody well know from experience are probably at least 3-5% off one
way
>or another. Back to the diagonal cutters & soldering gun . . as usual.

Tsk, tsk, tsk. If Kellie already "knows" the results are "off,"
why bother with those analysis programs?

What exactly is Kellie bitching about in "results?" VSWR?
Oh, excuse me, hams don't use VSWR...it is "SWR" in ham
terms. :-)

>> For this reason I'm actually not sure of the value of testing hams
on Smith
>> charts, but I felt pretty sure I had seen a question on them in the
pool?

>Beats me, I haven't spent much time poking around the pools. I don't
>see the point to testing for "Smith chart operations"any more than I
>see the point to test questions on using sliderule log scales to
>calculate decibles up/down.

Isn't MORSEMANSHIP the ONLY requisite skill needed to
be a "real" ham? :-)

Aren't "real" hams supposed to "work DX on HF with CW?" :-)

ARRL has ALL the plans/instructions/data on wire antennas for
"real" hams. Just follow instructions. No Russian/rocket-science
math needed!

>Based on some of the absolutely idiotic
>posts about antenna matching issues by duly licensed individuals I've
>seen in other venues indicate to me that if nothing else more test
>questions on transmission line theory and practice need to be "loaded"
>into the QPs.

Tsk, tsk. Passing all the TESTS to become "duly qualified" means
all "know" all about everything in radio, doesn't it? :-)

Those that don't have amateur radio licenses can't possibly know
anything about radio, can they? :-)

Obviously not. Without passing any ham tests, they don't have
the "interest" or "dedication" nor do they show "committment to
the ham community!" Tsk, tsk, tsk, tsk, tsk.... :-)

Well there are a lot more clean, unclean, or otherwise KWs on the air,
with this guy doing 40 grand worth of business daily. The guy is selling
amps all the way up to the 10 KW range, not to mention all the imported
hf transceivers he is selling. Apparently, he has found some loophole in
the law that he has driven a Mack truck through. He is advertising openly
too. Heard one report where he had three local hams tossed out of the
store when they started throwing hissy fits. Kind of funny in a way how
hams get worked up over something so unimportant.

In other words, he's asking for trouble and will likely find some. I live
out in the sticks SW of Cleveland with no neighbors, and yet I challenge
myself to not TVI my own house. I figure that as a fairly clean input, the
way the crow flies and lands.

I do have one amp that will not conform to those standards, but it's
been moth-balled for years.

BTW. I get forged a -lot- by two no code HT operators that have nothing
better to do with their time than fuck with CBer's.

At any rate, we're all radio cooling fans. :)

As a ham I'd just take a look around the store and then tell
the FCC what I think might be violations. And then
let the FCC take it from there. No hissy fits on my
part, let the FCC decide if there are really violations
or not.

NO WAY. :-)

You got caught, not me.

1. It doesn't matter WHERE a calculator is made as long as it works
and produces accurate results.

2. The original HP calculator works were in a separate division in
Corvalis, Oregon. [HP was the first to come out with a
scientific
pocket size calculator] Corvalis was also the site of the HP
Programmable Calculator Program Library; HP closed that down
in reorganizing or something, before they concentrated on
desktop computers. They had some good, handy programs with
the 67/97 mag strips. [you might have seen my name in their
listings...:-)]

3. You or anyone else can buy a Model 33 pocket calculator on-line
at the HP store; Model 32 has been discontinued but there's
still
support for it.

>> answers? :-)
>>
>> You got caught in simple entrapment. :-)
>
>Nah, *you* trapped yerself Sweetums.
>
>You screwed up.

Only in expecting Rev. Jimmy Who to come charging in on that country of fabrication. :-)

I didn't expect Kellie to know which way was where. After all, those "all WW2 jeeps had 24 VDC batteries" is something you never really said, right? Except you said it and it took the longest time for you to admit it. :-) Then there was the famous "26 Patents!" claim when you only had ONE and were the co-inventor, not the sole inventor. You eventually tried to squirm out of that by mumbling "foreign patent filings" to account for 25 out of those 26. :-)

You are trying to make a Big Molehill out of a pinch of dirt (relatively speaking) and NONE of that is relevant. Country of fabrication or of origin makes no never mind if a calculating device WORKS.

Now, on WORKING with a calculator, can you do complex number arithmetic on your HP 32S? [presuming you have one, that is, which hasn't been verified yet] I can do it on mine, no problem. It's easy.
So easy, I don't need some big PC program or Java script to do simple algebra solutions.

Now, MathCad is a nice package. It's also overpriced, wayyyy overpriced. Much the same as Adobe soaks customers with their softwares. If you don't have references to look up some common formulas (or don't know how), MathCad has some free program applications for common solutions, all nicely canned and ready to go. Beyond those, though, most MathCad users are rather in the dark without the "script" to follow. With a calculator such as an HP 33 (under $60) anyone can plug in their own common programs plus constants held separately (if desired), all remaining intact even when the thing is turned off.

But, you keep trying to build that molehill on "where something was made!" That's downright stupid, sparky. :-)

Kellie, I don't think you've got much put together on this whole exchange. It isn't enough to make you an "authority," much less "qualified." Go over to your raddio and Work DX On HF With CW. I'm sure you can do that. :-)

Good luck with that one now...

Best regards,

LenAnderson@ieee.org

Perhaps you think you can play basketball and only come in for the free
throws? You're either in the game or you're not.

As Cecily used to say, "Can you dunk?"

The 3965 khz pirate seems to be linked in some way to this guy. This
weekend there was a simo pirate broadcast on 3965/6673, and the
pirate was giving out a bunch of detailed info about the KC CB sales
operation, kind like he was "advertising" for the guy. 27680 was
mentioned as a channel where KC local info was available. Do you
think an activist liberal judge is allowing the guy to stay open?

According to the 3965 khz pirate, KC local info is available on the
27680 channel. I have been monitoring the freq. but have not heard
anything of value yet, just some general chatter. Let us know if you

get an address, name, or phone nr?

I think the idea was you could get, say a 70 on the writtens (up from
the current passing grade of *60*!) and pass code, *or* get, say, an 85
on the writtens and the code wouldn't be required at all. I'm just
guessing at the numbers but you see the concept.

Point is, reducing the requirements hasn't promoted growth. Recall that
before April 2000, the Tech required passing two written tests
totalling 65 questions. Now it's a single 35 question test - yet we

don't see growth!

Yep. The interesting thing is that allowing gay civil unions would
increase tax revenue.

And speaking of marriage: One thing I find interesting is that the
divorce rates in the "red" states are consistently and clearly higher
than the rates in "blue" states. Seems those folks who rant and rave
about "family values" and "covenants" can't seem to stay hitched very
long.

Here's the kind of thinking being put forth:

One plan being suggested in DC is for the USA to create a special savings account for each baby born in the USA, starting on a certain date. The Feds would put $2000 into each account each year until the kid reaches 18. Total investment $36,000. Assuming about 6% annual interest, each account would be worth over a million dollars when the "baby" reached 65.

Nice retirement package, huh? Except it won't work for several reasons completely obvious to anyone with common sense.

2123. Re: ARS License Numbers

Newsgroup: rec.radio.amateur.policy
Date: 2005-03-01 14:21:56 UTC
From: N2EY@AOL.COM
Message-ID: <1109686916.270772.118240@f14g2000cwb.googlegroups.com>
Source record: 103689

These are the numbers of current, unexpired amateur licenses held by
individuals on the stated dates:

As of May 14, 2000:

Novice - 49,329
Technician - 205,394
Technician Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750

Total Tech/TechPlus - 334,254

Total all classes - 674,792

As of February 28, 2005:

Novice - 29,216 (decrease of 20,113)
Technician - 266,509 (increase of 61,115)
Technician Plus - 52,137 (decrease of 76,723)
General - 137,456 (increase of 24,779)
Advanced - 77,351 (decrease of 22,590)
Extra - 106,243 (increase of 27,493)

Total Tech/TechPlus - 318,646 (decrease of 15,608)

Total all classes - 668,753 (decrease of 6,039)

Note that these totals do not include licenses that
have expired but are in the grace period. They also
do not include club, military, RACES or other
station-only licenses.

My own take on the situation is that there are indeed new people coming into the hobby, as I hear and see new licensees on the air.

But we are not seeing significant growth. Many of the people that signed on ten years ago have left. There are some ham related reasons, and some not, such as increased cell phone usage, which has decimated the "honeydew" Hams.

But it is indisputable that the reductions in requirements have NOT had any sort of significant positive impact on the Ham community.

Despite the hand wringing, there is a place for achieving something that means something. A test that is a challenge? So what? I personally think that the ARS is only strengthened by attracting people that enjoy a bit of a challenge.

I think it has been adequately proven that many if not most of the people that think that Element one needs to go away are also in favor of reduced overall licensing requirements. Certainly the leading organization for removal of the Morse test is.

Who pays that 6 percent interest? The last time I checked, the rate wasn't anywhere near that. Taxes on that money? Capital gains? Inflation? Your going to have to have some sort of way that the guvmint pays interest on the account when the prime is low, or you will be creating a powerful incentive for citizens to want a high interest rate which is counterproductive to the economy......The list goes on and on.

Also interesting how everyone in the US will retire a millionaire!

Ain't gonna work!

Just like you guys refuse to deal with reality anymore.

Look - you can't stop progress. Going around acting bitter about ever
little thing is no way to live.

Maybe it is time you guys try something different... learn a foreign
language, learn to play a musical instrument, get some exercise, play
cards/chess in the park, chase women... ANYTHING but the constant
negative attempts to block progress. Even if you guys were right
(which you aren't, and never have been), it isn't a useful expenditure
of your time to fret over this CRAP.

Yep. Same here.

> signed on ten years ago have left. There are some ham related
reasons,
> and some not, such as increased cell phone usage, which has decimated

> the "honeydew" Hams.

There's also the sad fact of things like hams becoming SKs and moving
into nursing homes, etc.

Back in the '50s and '60s, and maybe even into the '70s, almost all new
hams were teenagers or young adults. Young people still make up a good
percentage of new hams, but since about the mid-late 1970s we've seen
an increasing percentage of older people as newcomers. Indeed, back in
the early 1980s - *before* the Tech lost its code test - there was (and
still is) a surge of retired and almost-retired folks in these parts
getting ham licenses. Lots of new faces and lots of great hams, but
unfortunately most of them won't be hams long enough to join OOTC.

> But it is indisputable that the reductions in requirements have NOT
had
> any sort of significant positive impact on the Ham community.

Not long-term, anyway.

Yep. And if Element 1 is removed, and we still don't get growth, guess
what's next? NCVEC has already shown their hand.

> >>>Note that almost 5 years after the 200 restructuring we still
> >> retain more than 50% of Novices and 75% of Advanceds.

This indicates to me a significant number of inactive hams. Sure, there
are some who are satisfied with their license privs, but I suspect a

lot more are SK or have dropped out.

The number of Techs continues to grow in part because all Tech Pluses have been renewed as Techs since April 2000. But the total number of Techs and Tech Pluses is s few percent lower than it was in 2000.

Perhaps. Also, the "Amateur Radio in the 21st Century" paper equated passing the code test with winning the Tour de France or painting the Mona Lisa, and described the stress of dealing with grown people crying because they'd flunked the code test....boo-hoo....

> >>And it is the wrong approach. The proper approach is to allow access

for
> all the fuel stops needed.

Naw, just liquefy the stuff.

The big problems are:

- Handling a fuel that is a gas at STP is more complex than one that is
a liquid.

- Danger of fire and leaking pressure tanks

- Where's all the hydrogen supposed to come from?

> >>You mean like dragging the gay marriage issue into the Social

> Who pays that 6 percent interest?

That's the first problem.

> The last time I checked, the rate
> wasn't anywhere near that.

Bingo!

> Taxes on that money? Capital gains?

The money would be tax exempt until the person began to draw upon it.

> Inflation?

That's a BIG one!

~30 years ago, when I was entering the job market out of college, entry-level engineers with degrees were making about what *minimum wage* is now. Go back 50 years, and a $5000/yr income put the average person on Easy Street, able to support a middle-class family in a way that $50,000/yr won't do today.

Even if inflation stays low over the next 65 years, $1 million won't be enough to retire on. What really matters, of course, is what I call "differential interest" - the difference between inflation and the apparent interest rate. If you get interest of 6% and inflation of 2%, your money is really only growing at a rate of 4%.

> Your going to have to have some sort of way that the guvmint
> pays interest on the account when the prime is low, or you will be
> creating a powerful incentive for citizens to want a high interest
rate
> which is counterproductive to the economy......The list goes on and
on.

Yep.

> Also interesting how everyone in the US will retire a millionaire!

Sounds good until the reality cuts in. There are lots of millionaires today - on paper anyway.

> Ain't gonna work!

Yet that isn't some wild-eyed idea - it's something our alleged leadership has suggested!

Consider these other problems:

If there are, say, 4 million births per year, the govt. will need to put $8 billion into the accounts the first year, $16 billion the second year, $24 billion the third year, etc. This won't stabilize until the 18th year, when it reaches $144 billion per year being put aside in

these accounts. Most of that money would have to come from *new* revenue sources, because the existing Social Security system would have to continue to exist for a while. And that's based on *no* increase in baby production!

Where's all that money supposed to come from?

Then there's the question of shenanigans. Some people will try to beat the system in one way or another. More likely are govt. shenaningans - it will be hard for the pols to keep their paws off all that money in the accounts, just as they can't leave Social Security alone. Remember that the *real* problem with Social Security is that the current administration doesn't want to pay back what was borrowed! What's to keep them from "borrowing" from the new system?

I don't have the full details of the ARRL petition to hand, but basically it brings back the Novice licence (without the code), makes Techs into Generals and Advanceds into Extras, and dumps ths code test except for Extras, who would still have to pass it.

Two comments on the Antique Radio Relay League's news item. Firstly, it's very telling that they buried it down the page, just as they did with the announcement that the code test was abolished by the ITU.

Secondly, it does say at the end that "it's possible the Commission could wrap up the proceeding before that time frame", so IOW the 2006/7 is just the League's guesswork.

IMHO, the FCC will not adopt the League's proposal as such. The FCC say that they are looking for a consensus amongst us, and they are also on record as saying that the code test doesn't serve any useful purpose. There is no consensus, so I think they will choose from whatever has been proposed those things that suit their own organisational objectives, i.e. reducing administrative burden. IOW, fewer tests and fewer licence classes suits the FCC.

I predict the code test will not be a continuing feature in the NPRM, whatever else is, since eliminating a test reduces administrative burden and they are already on record as wanting to get rid of it.

Reducing the number of classes also appeals to the FCC, so maybe they might even adopt most of the League's proposal but get rid of element 1 as well? I don't think so, though, as the line of least resistance is to keep the current test elements as they are. This means grandfathering Novice to Tech instead of Tech to General, so that is what I predict they will do.

Basically a compromise that gives everybody something they want but
doesn't give anybody everything.

> Two comments on the Antique Radio Relay League's news item.

Your bias is showing, Alun.

> Firstly, it's
> very telling that they buried it down the page, just as they did with
the

> announcement that the code test was abolished by the ITU.

They post the stories in chronological order. If it's not at the top, that's because a newer story has displaced it. They did not "bury" anything.

And the code test was not abolished by ITU. All that changed was that the treaty no longer requires such a test. Signatory countries are now no longer *required by treaty* to have a code test, that's all.
>
> Secondly, it does say at the end that "it's possible the Commission could
> wrap up the proceeding before that time frame", so IOW the 2006/7 is just
> the League's guesswork.

Of course - and they make that clear in the article.

Back in summer 2003, ARRL said at least two years. Which seemed incredibly long at the time, but is now turning out to be short, if anything.
>
> IMHO, the FCC will not adopt the League's proposal as such.

Probably not. Nor will they adopt anyone's proposal as presented, IMHO.

> The FCC say
> that they are looking for a consensus amongst us, and they are also on
> record as saying that the code test useful doesn't serve any useful purpose.

When did they say those things?

btw, the FCC's words were "serves no *REGULATORY* purpose" (emphasis added) not "useful purpose". BIG difference!

And if FCC still thinks the code test serves no regulatory purpose, why didn't they just dump Element 1 in late summer 2003, as proposed by at least two groups? All it would take is a Memorandum Report and Order. In fact, as a temporary measure pending rewriting the rules, they could have simply ordered that anyone who passed Element 2, 3 or 4 gets Element 1 credit.

But they didn't.

> There
> is no consensus, so I think they will choose from whatever has been
> proposed those things that suit their own organisational objectives, i.e.
> reducing administrative burden. IOW, fewer tests and fewer licence classes
> suits the FCC.

Maybe.

But back in 1998, ARRL proposed free upgrades for Novices and Tech Pluses so that there would be four classes and no closed-out classes. Others have proposed similar freebies. FCC has consistently said no, and keeps the Tech Plus, Advanced and Novice alive in their rules and database. At the current rate of decline, it may be 15 more years before the last Advanced is gone.

> I predict the code test will not be a continuing feature in the NPRM,

> whatever else is, since eliminating a test reduces administrative burden
> and they are already on record as wanting to get rid of it.

Yet they have not done so. If they really think Element 1 should go, why wasn't it dumped in 2003?

> Reducing the number of classes also appeals to the FCC, so maybe they might
> even adopt most of the League's proposal but get rid of element 1 as well?
> I don't think so, though, as the line of least resistance is to keep the
> current test elements as they are. This means grandfathering Novice to Tech
> instead of Tech to General, so that is what I predict they will do.

Why? Keeping the closed-out license classes costs them little or nothing. Tech Plus will disappear in a little more than 5 years, as the last Tech Plus is renewed as Tech. The other two closed-out classes are slowly dropping, yet may last a lot longer because of renewals.

Maybe I'll write a proposal...

Maybe they can include it in a well thought out proposal just like Powel
with his BPL deal.

The reports of database nightmares due to more classes are greatly
exxagerated. If no more people are added to those classes, the database
simply sits there, bothering no one except the hand wringers. As
attrition hits, du to upgrading or license expiry or licensee expiry,
that just gets deducted from the otherwise inactive database. No biggee.

The Demographic shift in Amateur Radio is similar to many other
hobbies/avocations. I think once the dust settles, the typical new ham
will be in his or her 40's, and wanting to have a new pursuit after
becoming financially stable and perhaps having a bit more spare time in
his hands.

The exact same thing has already happened in my other hobby, Amateur
Astronomy.

Yoiks! Liquid H? Even if, the energy density is still quite a bit less
than gasoline. something like 25 percent.

Storage concerns are a big problem with the stuff. In a similar fashion
We have Natural gas buses in our area. Their tanks are on the bus roof,
and run the length of the bus. You just can't get as much energy out of
the stuff.

Yup. While seawater might seem like the obvious way out, hydrolysis of
seawater produces interesting byproducts.

Now tell the people in the western US that you want to take a huge
amount of their fresh water!! 8^) It is in short enough supply as it is.

Hey yeah! The stock Market always goes up over the long term, right?
While that may be true, people keep applying it to irrelevant issues.
This case is just one of using interest in a way that sounds good if you
don't look too deep.

By the way, did you know the producer of the "Swiftboat Veterns" is now
producing smear videos and literature against the AARP? The same people
they eagerly worked with a year or two earlier.

no shame, at long last, no shame.

True, as that is the age group of hams today. They drove the
young kids away from ham radio years ago.

Probably why much business correspondence is just so much mumbo jumbo,
or maybe it was outsourced to China.

It seems like there is more room on 10 meters because it is dead!
There is no propagation! 9 or 10 PM is a perfect time for your "show"
because no one will be able to hear your claptrap! At first you wanted
to get into broadcasting; you were denied a license, you tried pirate
radio, and now you intend to broadcast in the amateur bands...at first
you called it a "show," then a "broadcast," now it's an "information
bulletin!" We have an IDEAL place for your claptrap! Do it in the
Children's Band! There ain't no propagation there either, but perhaps
a few nearby chicken banders will copy! 10-4! Good Buddy.

>
> Oh, bullshit, big bad Dave. You were crowing, you were boasting.

That is incorrect. This is simply another untruth on your part,
Leonard.

> State Department isn't THE government...they only think so.

The statement is just silliness on your part. The Department of State
is a U.S. Government agency. No one wrote anything about it being "THE
government".

> Grow up. State Department doesn't operate like amateurs.

You know very little about either so I'm not inclined to use you as a
source of information.

> >> Poor guy got trumped by at least two others with MORE

That's right. Not trumped by you or the mysterious "other".

> >There is no evidence at
> >all that you have MORE HF experience than I, unless you want to
> include
> >your Citizens Band operation.

>
> Tsk, tsk, tsk. A long time ago I accumulated enough "HF
> experience" while in the U.S. Army doing nothing but communications
> for an Area Command.

Enough for what? You silly claim is that you have more HF experience
than I. The claim was a boastful aside and has nothing to do with the
current argument. It is simply another untruth on your part. I have
twenty years of government HF communications experience and 41 years as
a radio amateur. Your claim doesn't hold water.

> The military IS considered part of the U.S.
> government...or was, last I heard.

...and you spent relatively few of your years involved in military HF
communications.

> Class D CB wasn't yet approved
> in
> the USA when I finished active duty. [Class D and C Citizens Band
> are on HF, or weren't you sure about that?]

Oh, so your years as a CBer can't count toward HF experience because
they took place after your military service? I'm sure that means
something to someone somewhere.

> >You want to tread very carefully on this one or I see a sound googling
> >in your future.

> Go for it. Others won't like it and I don't give a damn. :-)

I'm sure that you won't care if the truth whaps you in the yap again.
It has happened before and I have no doubt that it'll happen again.
I disagree with your views about what others might think. A number of
them may get some amusement at watching you insert both feet into your
mouth (again). :-) :-)

> Showing your big shiny Raddio Kopp shield in its little wallet

> are NOT our gal parent, Dee Flint. :-)

No, Leonard, I'm the guy who informed you that radio amateurs already
have a place to go where they don't have to put up with you. :-)

> Like I said to you, like I said to Dee, if you want a PRIVATE
> chat room open ONLY to those you let in, you are as free as a
> bird (ostrisch most likely) to organize one.

...or we could, as before, just go to the ham bands. You cried foul on
it the last time. It took place on 40m CW so you could have tuned it
with your trusty Icom receiver. You just wouldn't have been able to
decode it.

> In the meantime,
> THIS newsgroup is still PUBLIC. Anyone who has access to
> the internet can come in here.

...and if the anyone is you and you continue to behave as you have in the past, you'll just have to take your lumps. That's the way it works.

> You can single out individual people ALL you want, quote from
> Google ALL you want.

Yes, I can.

> That's just harrassment that makes
> others tired of you even more.

Providing an accurate account of what was actually written is harrassment?
I'm sure it'll make you more tired of me. Deal with it.

> But, if you feel so "outraged" and
> "insulted" at not being considered a big badass "superior" radio
> god, go for it.

Why, thank you, Leonard, though I didn't really need your permission. On that "radio god" thing, did you ever make up your mind on whether I am one or not? You've shown some confusion on the issue.

> Your great big wonderful extra license doesn't
> make you chief of Who Can Post Here.

As you've pointed out, a license isn't needed. You've posted. You've lied.

> Why ARE you here?

Hmmmmmm. I'm a radio amateur. The name of the newsgroup is rec.radio.amateur.policy. Seems like a no-brainer. Do you need further clarification? Why are you here?

It is possible his work force is over 25% undocumented aliens. In which
case an activist liberal judge would certainly protect their rights by not
allowing the business to be shut down. By now the ACLU may also
be in the picture, and that means endless litigation.

A mistake IMO. I don't think closed classes are a good idea. It's better to
make a clean break and get everybody in the same system.

>>
>> I predict the code test will not be a continuing feature in the NPRM,

See above. They will have to consider all the petitions and then write an
NPRM that either does or doesn't restructure the licence classes.

>> Reducing the number of classes also appeals to the FCC, so maybe they

It's just an unnecessary complication. Three classes are easier to enforce
than six.

Ok, let me requote, word for word, what you originally wrote:

>>>about? FYI: I was handling the QSYs, opening and closings for a
>>>government 75 baud circuit via CW from late '87 through late '89

from
>>>Guinea-Bissau. Guess we didn't know CW was obsolete, huh?

Firstly, you didn't qualify "government." Since you call from a
Finnish server, have an OH2 (Finland) slash on your signature,
and Guinea-Bissau is an independent country, one needs
telepathy to accurately attach "US" in front of "government."
Secondly you wrote "75 baud circuit via CW..." which could be a
high-speed CW one as much as TTY; "baud" is the old rate name
in all telegraphy.

If this was a United States government link, that slow a rate sounds
suspicious considering that the military and State Department were
already starting to upgrade to 110 Baud (100 WPM) TTY in the
late 1960s. Commercial TTY users were doing the same at the
same time. Lots of older 60 WPM TTY machines were becoming
available as surplus by the mid-1970s, many being converted for
TDD use by hearing-impaired persons courtesy of many clubs of
ex-telephone-company-workers.

Now, I'll grant you that surplus telecomm equipment COULD have
gone into use in Guinea-Bissau considering that country subsists
largely on grant money from other nations and such aid is of minor
value. [the USA is contributing $2.5 million to them in proposed
1998 aid grants] It's difficult to envision a US government circuit
running that slow some 20 years after starting to upgrade to 100
WPM machinery.

>Now we get a geography lesson from Len. It was a U.S. government
>circuit, Len. It wasn't 75 baud CW; it was 75 baud RTTY with CW to
>coordinate it.

There's LOTS of geographic, socio-political information available
on the Web, many site choices. ARRL publications don't carry
much of such information. Anyone with Web access can look them
up. As to "lessons," do you think everyone knows ALL the small
and emerging nations of the world?

Why does an RTTY circuit (of any speed) need "CW to
coordinate it?" RTTY circuits have been used on HF since the
1930s without any extra CW circuit for "coordination." It's a very
simple task to tune in an 170 to 850 Hz shift RTTY signal and lock
onto mark and space with an RTTY demod. "R-Y" generators
were common in old 5-level days, even one-print-line "Fox Test"
generators. ???

Len, you are perhaps the greatest picker of nits I've encountered in
ages. There aren't many 75 baud (100 wpm) CW circuits. Regarding the
Finnish server and /OH2 and my talk of Guinea-Bissau (or Sierra Leone
or
Botswana) I guess you assumed I'm some sort of commo mercenary, selling
my skills to the highest bidder. It doesn't really matter which
government in the end for purposes of comprehension, does it?

Yeah, that's it, Len. It was suspicious. I had some sinister purpose
in deliberately posting lies. Thanks for letting me know what the
State
Department (my agency) was using.

By the way, 45 baud equates to 60 wpm.

> Now, I'll grant you that surplus telecomm equipment COULD have

Do your math homework regarding baud rates and we'll talk again and
please try to get over that difficulty in envisioning things. For
practice, try envisioning message traffic plus overhead for the
synchronous circuit. Throw in QRM, QRN, fading, multipath, etc.

> >Now we get a geography lesson from Len. It was a U.S. government

No, I don't. Many amateurs I worked from J52US wanted to know what part
of South America I was in. Again, it didn't really relate to my post.
I'm not certain why ARRL publications WOULD carry such information. I'd
first turn to an atlas or a geography book. The only problem is that
you don't find much about digital data circuits in an atlas.

> Why does an RTTY circuit (of any speed) need "CW to
> coordinate it?" RTTY circuits have been used on HF since the

How do you know that no cw cicuit was needed for coordination, Len?

> It's a very
> simple task to tune in an 170 to 850 Hz shift RTTY signal and lock
> onto mark and space with an RTTY demod. "R-Y" generators

> generators. ???

Here's a lesson for you, Len:

Synchronous circuits are not the same as async circuits. There's a
clocking factor thrown in to the equation. Not only that, there are
many, many, many such signals in designated portions of the bands. How
would you know which was the right one? Nobody constantly stands over
such a circuit which is pumping out traffic throughout the working day.
Let's say that propagation changes and you lose sync. You need a way to
let the other station know where you'll be transmitting and where you'd
like him to transmit so that communication can be re-established.
That is accomplished via use of one of many CW guard frequencies.

When opening in the morning, you'd want to let the distant end know that
you were ready to open and to state, again, where each of you should be.
In sending a closure. You'd want to let him know your last sent and
received channel number and what time you'll reopen. Finally, though
equipment was redundant, there can be times when all of the RTTY
equipment is down. You'd need a way to let the distant end know that
you were down; why you were down, about how long you'd be down.

Not being a tested high-speed telepath, it is difficult to comprehend something NOT written. All any of us can do is read the actual words written. Comprehension takes place on written words, not the unwritten ones. You could have said "US circuit" or identified that you were working for the US State Department, but you did not do that until later...as in:

>Yeah, that's it, Len. It was suspicious. I had some sinister purpose
>in deliberately posting lies. Thanks for letting me know what the
State
>Department (my agency) was using.
>Do your math homework regarding baud rates and we'll talk again and

>please try to get over that difficulty in envisioning things. For
>practice, try envisioning message traffic plus overhead for the
>synchronous circuit. Throw in QRM, QRN, fading, multipath, etc.

I broke into HF communications in the US Army Signal Corps at Army station ADA in Tokyo, beginning in 1953. I realize that primitive Army throughput of 220 to 240 thousand messages a month, trans-Pacific to San Francisco, Seattle, Anchorage, Honolulu, Guam, Manila, Okinawa, Pusan, and Seoul using 27 transmitters ranging from 1 to 40 KW output plus the then-largest receiving site (shared with USAF) was not as good as what State could accomplish. Since none of the circuits sending nearly a quarter million messages a month were not CW, I have little observation of CW nets.

>Here's a lesson for you, Len:

Thank you, I'm always looking for new knowledge.

>That is accomplished via use of one of many CW guard frequencies.

While I don't have many details of modern-day military signal operations for Force XXI and the Digital Army, I can only draw on texts and personal observations. According to NAVSHIPS 0967-255-0010 "Principles of Telegraphy (Teletypewriter)," June 1967, the difference between "synchronous" and "asynchronous" is the absence/presence of start and stop bits. Since the old old 5-level TTYs at ADA always ran with start and stop bits, even with the 4-loop time division multiplexers (Navy contract) on four radio circuits, synchronous TTY is a stranger...I lept over that to direct digital in industry. However, ADA never had any specific problems with the propagation to Frisco, Honolulu, Seattle, or Manila compared to the single-channel RTTY and SSB circuits.

At one end of the entire second floor of a converted warehouse that housed the manual paper tape relay center was Control. It was a largish room with acoustic insulation since the 200+ TTY units (mostly chadless printer-punches and transmit distributor racks) made a lot of noise. Control had eight handsets for the first voice channel on each SSB circuit. Old Model 19s were

there as the teleprinter orderwires for non-voice circuits. There were three loops for as many "Fox Test" generators always running on the floor above in the Carrier room. If there was some extreme problem to one circuit's location, there were work-arounds through
other sites but those were not used as far
as I knew from a year at the Chou Kogyo relay center. If a circuit was down, the printer made garble or sat idle; when it came back up, printers synchronized themselves.

In modern Army communications, digital teleprinter circuits synchronize themselves, even the ones that are encrypted. That goes all the way down to manpack SINCGARS radios. No problem with alleged
propagation variations affecting comm...it is
either there or not. Voice is the orderwire coordinator...or it is another digital radio circuit. While CW "could" be used, it isn't essential to "maintaining synchronization" any more than a voice contact can "maintain synch."

Between Army service and later aerospace experience, I missed the Model 28 era, even a lot of the Model 3x family except those used as early computer terminals. Techniques could have changed, of course, but teleprinters were fairly well established in methods and principles at the end of the 1940s. Improvements were external to the mechanisms such as the Navy MUX rack (primitive, it used 7-pin miniature thyratrons as "memory elements") which worked very well. Being all-manual, I missed such improvements as the old AN/FGC-30 switcher not used at ADA and could only view the many modern switchers/routers used in today's Army. CW played NO role in maintenance of the new or old signal centers...so it is difficult to imagine an intermediary period where CW was essential to maintain circuits as you described.

>Finally, though
>equipment was redundant, there can be times when all of the RTTY
>equipment is down. You'd need a way to let the distant end know that
>you were down; why you were down, about how long you'd be down.

In three years at ADA, there was only one period of about 4 to 5 hours when a Pacific area radio blackout happened. It had been somewhat predicted but everyone, Army, Navy, USAF, all knew when it occurred...and when it was expected to be back up. Even CW could not get through such a situation...;-)

At all other times the 24-hour-a-day ORDERWIRES were there to coordinate everything. No problem.

Len Anderson

So, Leonard, munch on the words. No boast or brag on my part.

If by trumping me, you meant that your word output exceeded mine, I suppose you win. If you intended to trump me with facts, you failed miserably. You weren't where I was. You weren't doing the job I was. You quote scads of information on how the Army handled RTTY circuits fifty years ago but not a single shred of information on how the U.S. Department of State conducted AFRECONE communications.

In short, you were all wet then and you lied about the events now.

You know less of State Department communications than you know of amateur radio. You were not and are not a part of either.

Any word on the mysterious "other" who was supposed to have "trumped" me?

Maybe. Or maybe their mind has changed on the subject.

Why not?

> It's better to

All US hams are in the same system. IMHO, and FCC's to date, free
upgrades are *not* a good idea.

They don't have to do that to dump Element 1. They can say the issue
was dealt with in the past and there's no new info and since there's no
regulatory purpose served, bye bye Element 1. But they haven't.

Yet FCC *turned down* such proposals in the past. They prefer more classes to free automatic upgrades. Enforcement is a nonissue; the FCC folks know where the subbands are. And it's the rare ham who strays, judging by enforcement actions.

I got my FCC commercial telegraph and amateur extra licenses in the early
60's. I also bothered to get a legitimate CB license, and know plenty of law
abiding CB operators. So, don't try get people to believe that CB operators
are the same as criminal radio pirates!

I respectfully disagree. That is a huge difference. If we were tested
for our knowledge of Electron tube circuitry, it would not be serving a
useful purpose.

Despite the hand wringing, Element 1 is just another part of the test.
A good case can be made that its inclusion or exclusion makes no
particular difference pro or con to the ARS. So they probably didn't
feel the need to mess with it.

>
>>All it would take is a Memorandum Report and Order.

I doubt that. Maybe the No coders can try to throttle the petition
process so that messy things like the law, due process and free speech
can be eliminated for expediency?

(major tongue in cheek mode here, I know you would never seriously
suggest that people should be able to speak their mind)

Personally I could care less if you take up every frequency in the amateur spectrum, I am no longer active on the air, so you aren't getting in my way. What amazes people is why a fat, stupid motherfucker like you spends his time broadcasting a show on AMATEUR frequencies and thinks he is doing the SERVICE a favor by informing the masses that amateur radio is dying. Not only do you NOT have an audience, which is fundamental to any broadcaster and to your "purposes" (and I use that term loosely) you are too fucking stupid to realize something: The "listeners" are a handful of hostile hams that happen to tune across your stupid bullshit. If you have nothing better to do, fine, but it might be more fun for you to go back to sucking your thumb or jerking off or just sitting with your fingers up your ass.

Lessee...I was 14 and flunked 13 wpm the first go because the examiner couldn't read my longhand. What the sadistic IHM nuns called "Palmer Method",
for some reason.

So I went home and taught myself to block print and copy Morse in big square capital letters (a skill not taught in the parochial schools of the day) and came back some weeks later, when I passed easily.

I don't think tears would have had any effect on ol' Joe Squelch back then...

Making a requirement optional is indistinguishable from abolishing it. It's
just a different form of words used to keep some countries happy.

i.e. no regulatory purpose means no purpose useful to them as regulators -
no contradiction there

>
>> > And if FCC still thinks the code test serves no regulatory purpose,

>> petitions dumped on them?
>
> Maybe. Or maybe their mind has changed on the subject.

I think they have beleived that since the '70s, but have hung onto the code test under pressure from some hams, including the League. The question is not whether their minds have changed (I beleive they haven't) but whether they beleive they can get rid of the pesky code test without upsetting too many hams. At this point in time I think they can, but it depends on one's definition of 'too many'.

Of course, prior to 2003 they couldn't do it, but they had long since abolished the sending test anyway, even though that was required by the ITU. Talk to Phil Kane and see what he thinks of that from a purely legal perspective. You can't construe a statute in such a way as to ignore it's plain language by arguing that meeting one of the requirements indicates that you _could_meet_ (NB: not _have_met_) the other requirement. I am talking about _sending_ and receiving Morse code by _hand_ and by ear. Of course, it was a treaty, not a statute, but that should make no difference.

> upgrades are *not* a good idea.

Look at it from the other way around. It's not right to have a closed Advanced licence with some of the theory and some of the privileges of an Extra and not admit new people to it. That's not fair to the new Generals. IF OTOH, you counter that by saying that there's little difference in the theory level, then why not grandfather the Advanceds to Extra?

If everything were done your way you could only create licence classes and never abolish them. Eventually you would have Heinz 57 varieties of licence, but only two or three that you could actually apply for, a system

that only a civil servant could love. The only way to avoid that would be
to change nothing, ever, which may be your hidden agenda.

Me give a rip? More like Amateur radio R.I.P(rest in peace)

You've heard of out-come based education, well the ARRL wants out-come
based licensing. They don't care about about quality anymore, only
quantity. I just want to see they are still continuing their campaign to
destroy the integrity of the service.

Some people are unable to grasp the finer concepts of subtle
differences. To them, it's an "all or nothing" world.

In a sense it makes no particular difference to me or you, but we are not
the whole ARS. No-coders are hams too, and there are other people who are
not yet hams to consider as well.

NCI did try to get the FCC to issue a Memorandum Report and Order, but as
you say, the FCC probably thought that would deny due process to all the
people who filed petitions, which is probably fair comment.

It's not particurly difficult, but I can see no need to continue the closed classes. All those who would get a 'free upgrade' have held their licences for some time, so I foresee no impact whatsoever from eliminating those licences and upgrading them.

There are plenty enough people - like myself - that don't see the Morse
code issue as the big headline. Despite my support for the continuance
of the test, I think there are more important issues in the ARS. Morse
code testing is probably about 4th or 5th. Not in the noise, but far
enough down.

I was a no-coder once. In fact, until around mid 2000, I was perfectly
happy to remain such. Then after my first exposure to Field Day, I was
hooked. I said "I want to do this" and asked what I needed to do. So I
did it. It wasn't as easy for me as for some. The writtens were easy for
me, but the Morse code wasn't.

The point is Big deal, I wanted it, I went out and got it.

If you want to break the law, go ahead and be a pirate. See if you can avoid being caught and punished. But don't try to lump yourself in with hundreds of thousands of honest people who operate on the citizen bands legally. Pirates are NOT CBers, unless the "C" stands for "criminal" and the "B" stands for . . . . . ; well, you figure it out!

Do you comprehend standard English?
No, I did not think you did, judging from your reply.

Absolutes have their place in certain disciplines.
Today's liberal Democrat party is an example where absolutely no
absolutes apply. Even Hillary Clinton has finally figured that out.

it is true that a lot of them aren't. However, most of the new crowd coming up these days don't have the benefits of having a local "elmer" on the block to show them the rops.

Also, I may be a no-code tech, but that is because I chose that path. I did bother to learn code as a kid (part of a boy scout merit badge assignment) and I did have a CB license when I was 10 (1975). as for the finer points of the law the other poster quipped about: it is amazing what a little research and learning will get for you.

Too bad most of us who are the "old timers" can't be bothered with the younger set anymore. :(

Perhaps its time to make a change, get involved and at least try to contribute to better radio. it would be nice.

Eric -
I can only speak for myself. I've been active in licensing. When doing contract work in other cities, I provided lunch-time instruction two noons a week for those interested in licenses. I also taught ham radio classes via my club in Ohio. Never mentioned the no-code option to those interested in getting a license; however, some students dropped the code training when they found out about the no-code option. OK by me, as long as VHF/UHF operation was really all they cared about. I also got the library in Columbus, IN, to let me give classes there at night. To the best of my knowledge, everyone who went up to Indianapolis to take their test passed the code and tech-level theory. Two passed at 13 wpm, even though the goal was only 5 wpm. I plan to start back doing class training through our local club, now that I'm settled into a new QTH. Right now, I make it a practice to try to work two or more slow-speed stations in the Novice band sections each week. Often I wind up working another Extra ham, who is also looking for beginners just like I am. But I do really enjoy the occasional "first contact ever" QSOs. For those stations that appear to be newcomers wanting to work some CW, I send out an unsolicited QSL. So that's my little part in trying to help out. :)

Patient Assessment
Axis I 300.11 (classic conversion V disorder) Axis II 301.6 (dependent personality disorder, with avoidant features)
Subject has strong histrionic component to his personality and a strong need to be the focus of discussion and center of attention. Subject is immature, dependent, selfish and
extroverted, resulting in passive/agressive ego attachment. Subject rarely expresses overt anger and hostility, embracing passive-aggressive or passive-dependent dependencies.
Subject displaces suppressed emotions onto physical complaints. Subject suffers from a variety of conjured maladies from which subject derives considerable secondary gain, validating his inability to respond
to daily responsibilities and normal occurrences associated with everyday life. Subject sees himself as normal and responsible, just
not functioning well due to physical limitations. Subject denies possibility of psychologoical conflict as possible source of his problems.
Subject expresses delight in agitation of those which he associates as belonging to his realm.
Subject demands sympathy and attention from others. Subject maintains he does not command the respect he deserves.
When confronted in group therapy concerning issues other group members may have regarding Mr. Hall, repression and displacement are invoked as a primary defense. Subject does not see
himself as emotionally dependent, despite family member reports of the need to "walk on eggshells" around him. Subject
has few close relationships, those of which are co-dependent in nature.
Mr. Hall expresses traits of a classic schizoid patient. Possible borderline malingering hypochondriac. Subject expresses strong deficits in communicative skills and is prone to lending himself false support.

This patient was brought to my attention upon a family intervention conducted by my esteemed colleague, Professor _____ of the Forensics Psychology Department at _____ Hospital located in Philadelphia, Pennsylvania. Swore and bound to me upon this day of our Lord____, 2005.

Subject: David T. Hall Jr.
Observation: Denial, paranoia, obsessive. Possible bi-polarity.
Assessment: Personal issues continue to
Prognosis: Fair.
Recommendations: Continue group therapy 3X week. Maintain current level of rx. Type, cross and evaluate for possible Lithium candidate.

My contacts tell me he is under protection of a liberal activist judge.
Best thing for hams to do is either vote Republican or tell the Senate
Democrats to cease obstructing Bush's court nominees, then you
would not have problems like this.

bwaahaahaa

All kidding aside, I have *never* seen Alun write anything that could possibly be interpreted to mean that all sides should not have their say.

There's another frequent poster here who has told others to "shut the hell up", but he bears no similarity to Alun except for being against the code test.

> Exactly what would be so difficult about it?
>
It would be nice if there were no closed-off license classes - but not at the cost of free upgrades. FCC isn't complaining about the admin cost of Novices and Advanceds, either.

Look at it this way:

An Advanced is same as Extra except for small parts of 4 HF bands, vanity call choices and some VE privs.

A Novice is a beginner license with certain limited privileges

A Tech Plus or "Tech-with-HF" is a license with the privs of a Tech and a Novice.

And I know some people in their 60's who have just bought a house. They
may or may not finish their mortgage.

My point is that a new demographic is emerging. It is one of a mature
person who has decided to get into a hobby as they start to have a bit
more leisure time. For myself, that started when I was in my mid-late
40's, as my son graduated high school and the travel hockey wound down.
All that tends to free up the finances a bit also.

Welcome back to nuc energy!

One thing I am adamant about is that we should never try to extract the
energy needed to run our country from materials that humans need to
support life. Biofuels such as corn based ethanol, and hydrogen taken
from fresh water are big no-nos in my book. If we go down that road, we
may some day have to choose between propulsive energy and human life.

No, I mean I 'could care less' because there is a slight chance that I might be able to care a little less. Not very likely because I'm not going to be listening to this moron any time soon.

That could only be good. I've found the stuff done in the past by Dave Bell and Roy Neal to be lacking. A good historical narrative leading to the present and showing active hams doing what they do would be nice, especially if they leave out anyone wearing a tee-shirt or ballcap except perhaps in a Field Day scene.

I never got more of a buzz from passing a morse exam than I did when passing a tough chemistry exam. Ah, but passing the entire exam for obtaining a license opened a window to the world.

I started copying morse in block caps and it was an easy transition.
I'd done most of my schoolwork in upper and lower case printing 'cuz the
teachers had a rough time reading my left-handed scrawl.

We've been importing natural gas for decades. Ever hear of the "Big
Inch" pipeline?

> Didn't AARP lose membership for supporting Shrub's prescription plan?

They lost me before that. They sent me that crummy "My Generation"
magazine about 50+ folks in denial over aging *and* AARP tried to
represent me on issues where I took strong exception to their views.
After three years of membership, I couldn't find a benefit to belonging.

I hope you'll take this particular tack when Mr. Hollingsworth next contacts you, Todd. Just tell him to turn the dial. I'm sure he'll be impressed with your I'll-do-what-I-want-on-the-bands-and-to-hell-with-anyone-else view.

You can't a broadcast license?

I guess we're stuck you.

You big IQ.

You colludge material.

Personally I couldn't care less if you take up every frequency in the amateur spectrum, I am no longer active on the air, so you aren't getting in my way. What amazes people is why a fat, stupid motherfucker like you spends his time broadcasting a show on AMATEUR frequencies and thinks he is doing the SERVICE a favor by informing the masses that amateur radio is dying. Not only do you NOT have an audience, which is fundamental to any broadcaster and to your "purposes" (and I use that term loosely) you are too fucking stupid to realize something: The "listeners" are a handful of hostile hams that happen to tune across your stupid bullshit. If you have nothing better to do, fine, but it might be more fun for you to go back to sucking your thumb or jerking off or just sitting with your fingers up your ass.

And I'll bet ya it still fits!

> ps -anyone care to help me shovel snow? Man, will this sh*t ever
end?

Ya wanna laugh (or cry?), Jim...???

If you didn't already know, I grew up in NE Ohio, just south of Cleveland, so I spent my fair share of days standing in blustery, blowing snow waiting for the school bus.

Zap forward 20+ years and I moved to SE Tennessee after I left the USMC. Imagine my surprise when I find out "snow days" are called just on the THREAT of snow, let alone it actually falling! An inch of snow around here is reason for the tribes to swamp the Food Lion "gathering in the goods" for the "blizzard"...!!!!!!!

Dig, Brother, Dig!

73

Steve, K4YZ

PS: Lotsa folks from OH wound up in TN cuz they had a snow shovel strapped in the pick-up truck...They unloaded the truck when a local said "Wassdat fo?"

Lennie said there wouldn't be a "Morse Code Exam Debate" thread.

I specifically made one up and invited him to "debate" any new
issues vis-a-vis that topic.

It's been here a week now. Lennie's only "comment" has been to
make deceitful and mistruthful comments pertaining to Amateur Radio
licensees. Strictly off topic and of "personal attack" mode.

Lennie proved wrong and proven to be the liar and antagonist I have claimed him to be.

Again.

Dam right, I'm in amateur radio not for you, Hollingsworth, bath whore
man, or any other cry baby on here...I'm in amateur radio for myself,
and only that. IMHO the attempt by Hollingsworth to scare me out of
doing my information is an atempt to supress my first amaendment right.

> > Yeah sir, I'm now in the amateur radio band transmiting by hourly

> We've been importing natural gas for decades.

But not by ship!

> Ever hear of the "Big Inch" pipeline?

Oyez.

When I was a kid, there was a large part of South Philly devoted to the gas works, where coal was heated to make producer gas and stored in huge expandable tanks. The conversion to natural gas eliminated all that.

I think that demographic has been around for at least 2-3 decades. But
your point is well taken.

And it has unforeseen effects, like driving the "average age" of US
hams upwards.

Please see the links I posted in my reply to K8MN earlier today.

The NCVEC proposal is derived almost word-for-word from that paper. Interesting to note the mistakes in the paper and its 'we know better than you' tone from an author who *brags* he can't even pass the current tests!

Makes the ARRL proposal look like a work of genius by comparison.

The plants are obvious terror targets. The long term problem is the
waste.

One solution being explored in places like Australia is the solar tower
concept. Uses desert land.

A point well taken! Hwoever, if fuels can be extracted from waste
products (TDP, for example) that's a win-win.

> If we go down that road, we
> may some day have to choose between propulsive energy and human life.

We already make that choice when we import oil from certain countries
and turn a blind eye to what else they do. Like the way the Reagan
administration and Shake Hands dealt with SH back in the '80s.

2196. Hams Whine About Legal CB Amplifier Sales

Newsgroup: rec.radio.amateur.policy
Date: 2005-03-03 13:56:01 UTC
From: Lloyd <lloyd@spamnethamsorg.net>
Message-ID: <d074ue$90t$0@pita.alt.net>
Source record: 103711

Hams continue to whine about a KC electronics dealer who has found a loophole to sell CB amplifiers and imported non type-approved hf radio equipment. The dealer is under the protection of a liberal activist judge who is protecting the rights of undocumented alien employees. Typical of hams, they prefer to whine in various forums and on the air, rather than writing a letters to their senators and voicing their objections about the obstructionist liberal Democrats in the U.S. Senate who are blocking Bush's court nominees with threatened filibusters. The same liberal activist judge is allowing other area dealers to sell previously illegal CB equipment as well, as long as there are no references to God in the stores or on the equipment.

You wrote:

"the announcement that the code test was abolished by the ITU."

The *treaty requirement* was abolished, not the test itself. Very
different things.

My point is simply that something said by FCC years and years ago may
or may not still be their thinking today.

Not the point - of course they said it. My point is simply that
something said by FCC years and years ago may or may not still be their
thinking today.

What if their minds *have* changed? Perhaps they have looked at the
arguments
provided by pro-code-test folks, and at the results of the
reduction/elimination
of code testing in the USA and other countries, and have concluded that
Element 1 is no big deal. Maybe they've even concluded that it *does*
serve a useful,
regulatory purpose!

of an
> Extra and not admit new people to it.

Sure it is. In fact, there's a precedent for it. From Jan 1 1953 to
November 22 1967, you could not get a new Advanced but existing ones
could be renewed and modified.

> That's not fair to the new Generals.

Sure it is. They get the current tests, not the old ones.

> IF OTOH, you counter that by saying that there's little difference in
the
> theory level, then why not grandfather the Advanceds to Extra?

Because there *is* a difference.

> If everything were done your way you could only create licence
classes and

> licence, but only two or three that you could actually apply for, a
system
> that only a civil servant could love. The only way to avoid that
would be
> to change nothing, ever, which may be your hidden agenda.

Not at all.

The closed-off license classes are slowly but surely disappearing. As hams holding those licenses upgrade or drop out, the numbers will decline and eventually reach zero. At that point, the license class can simply be written out of the rules.

FCC kept Advanced as a separate license class not available to new issues from 1953 to 1967. During most of that time the "database" was not computerized. Advanceds made up about 40,000 of the then-250,000 US hams. Today with a computerized database it's a lot simpler.

I think keeping old license classes is better than free upgrades. Apparently so does FCC.

> > Yet FCC *turned down* such proposals in the past. They prefer more

we
> agree, then they'll do it.

Perhaps. But we don't agree!

The fact is that comments to FCC show no consensus on a number of issues. In fact, if you look at the number of *individuals* who comment pro-or-con on code testing, you find majority support *for* the test. Now since everyone is free to comment on FCC proposals, why shouldn't the majority opinion decide?

in fact, what does your commentary have to do with this conversation????

English-Challenged? well, depends, doesn't it. is it the "king's English" or
"American English" <of which I speak>?

still, it is irrelevant.

I lean towards "troll", Robert...

Ya ever notice that people who complain about others "whining"
about laws being broken are those who are themselves in favor or
actually involved in breaking the law...???

The code test is no longer *required*, but is *optional* for
countries to test prospective hams for HF licenses. Which
means that the treaty doesn't *forbid* code tests or code use
for that matter.
>
>
> What if their minds *have* changed? Perhaps they have looked at the

The FCC noted that there's been no noticeable increase in
violations in HF since they let 5wpm'ers loose on it back
in 2000. Trouble spots like 14.313 predate that by many
years. So 13 or 20wpm doesn't serve a regulatory purpose, and
the FCC isn't in the business of handing out "gold star"
awards.
>
>

>
> One alleged violation of the treaty (no sending test) does not justify

>

Way back when (1976) I had to do a sending test. On a straight
key mounted to a school desk test station. I pounded a few
words of code and the examiner said, "okay, you pass".

It seems that it was extremely rare that someone who passed
code copying failed sending, so why bother?

>

Then keeping code for extras but not generals doesn't
satisfy the above. Either the code test exists or
it is gone completely. If they decide to keep the
code test, the FCC might decide to leave things the
way they are now. That requires minimal effort on
their part, and then they can do something else like
make rules that one company can own every broadcast
station and paper in every city.....

>
>>Advanced licence with some of the theory and some of the privileges
>
> of an
>
>>Extra and not admit new people to it.

The FCC could equate 13wpm with the old element 4b (the old
pre-restructuring written) and declare that every advanced
is now qualified to be an extra and make them all extras.
I don't have a problem with that.

>

That means that few hams violate that rule, or many do
and the FCC doesn't much worry about it. Though with
databases like QRZ.com other hams may question why you
seem to be out of you subband. I had this happen for a
few weeks after I upgraded, and I said that I just upgraded.
"Congrads" was the usual reply. I had neglected to
do "whiskey alpha two india sierra echo slash alpha echo"
to mark my new upgrade. No biggie.

It's not a popularity contest, a *good* reason will trump
many "votes" for a weak reason. Who decides "good" vs
"weak" is another issue....

You must be bored Steve, as none of your regular r.r.a.p. playmates are currently bickering with you? Ever hear of the "message," versus the messenger? There's a regular pirate whose been operating on 3965, and the stuff he puts out ranges from the interesting to not so interesting. It doesn't require much effort to set your hf tuning dial to 3965 and get first hand what the guy is saying, does it? Sort of beats calling people names, prior to hearing it first hand. Wouldn't you agree? Same things goes for Mr Casey. Then again, nevermind. I forgot I was in the r.r.a.p. play area where wrong is right, and right is wrong, or something like that. LOL!

73,

Lloyd

More profanity by the "radio professional" in order to forcefully
express his already disproven assertion.

Leonard H. Anderson of Sun Valley, CA, is just a liar. Period.

Just "enough" for him to try and use it as a "newsgroup messaging
point", whatever that is.

In any case, Lennie never had an MOS that designated him as a
radio operator anyway. No doubt he "keyed up" a transmitter in order
to set SWR or validate a repair, however he was never a "radio
operator".

I am sure he rationalizes himself a "radio operator" since he was
part of a communications unit in the same way he tried to rationalize
his "I handled 2.2 million messages" claims as "Oh...what I meant was I
was part of a TEAM that handled 2.2 million messages".....Or his other
claims about his alleged military "career" based upon the sacrifices of
Soldiers who died in combat 3 years before he was enlisted.

Lennie's real big about embellishing HIS "accomplishments" on the
TRUE accomplishments of others.

I am sure Lennie would be in the NG the next day telling us what
was said after he interfaced his computer withe the receiver after
writing a CW decoding program off the top of his head......

> > others tired of you even more.
>
> Providing an accurate account of what was actually written is
> harrassment?
> I'm sure it'll make you more tired of me. Deal with it.

Lennie's the only one I know who claims "harrassment" at being
confronted with his own words.

Perhaps if he stopped lying and expressing such hate and
discontent for people he has clearly stated he really has no intent on
socializing with anyway he wouldn't be "harrassed" like he is...?!?!

> > But, if you feel so "outraged" and

What's with Lennie and the term "badass" today anyway?

Personally, I bet it's because what he's getting at home, now he's redirecting his frustrations on us......

> > Your great big wonderful extra license doesn't

Because, unfortunately, there are those who think that "freedom of speech" means being allowed to be mean spirited, antagonistic and out-and-out deceitful.

Whatever Lennie MAY have been in his "professional" career, an untrustworthy liar (as if there's any other kind..?!?!) is what he wound up being.

His lies and his deceit are documented in volumes in this forum, and will forever overshadow whatever he "wrote" in Ham Radio or any other journal.

The only one's who "bicker" are the ones who find it necessary to
lie and deceive.

> Ever hear of the "message," versus

Sure it does.

And generally when you post to this or any other NG it's vile,
mistruthful, profane or factually barren.

Lastly, there was nothing about anyone EXCEPT you in the post I
responded to...YOU stated hams are "whining". If that was not your
intent, YOU need to re-read what you wrote, figure out why it was
interpreted that way, then correct your grammmatical and expressive
errors, Lloyd.

> Same things goes for Mr Casey. Then again,
> nevermind. I forgot I was in the r.r.a.p. play area where wrong is
> right, and right is wrong, or something like that.

Nope..."right" is still "right" and "wrong" is still "wrong".
That's why people like Lennie, Brain, Mark Morgan, and, "ahem", YOU get
your noses rubbed in your verbal run-off as often as you do.

> LOL!

Don't look now, Lloyd, but the laugh's on you.

BTW...I delted the cross post on the response...You'll actaully
have to leave rec.radio.cb in order to read it...Sorry.

No, they're not.

But they ARE in the business of making sure that thier rules meet
the test of the enabling regulations.

Part 97.1 establishes the Basis and Purpose of the Amateur Radio
Service. The B&P continues to establish an expectation of self
training and communications skills that prepare the licensee to meet
the needs of the B & P.

So...Until Part 97 is altered per process otherwise, Morse Code is
still required for access to HF allocations.

And as Jim noted, so far, the overwhelming opinion of those who
have cared to express an opinion is "Morse Code skills are
needed"...Even if Lennie says they aren't...

Hi folks,

I just bought a batch of Amphenol PL-259 83-1SPs to assemble some jumpers. When did Amphenol shift from 'Made In USA' to 'Assembled In Mexico'? The whole reason for buying Amphenol was to:

A) Enjoy that Amphenol quality. (BTW, they don't even look the same. The dielectric has a cheap milky recycled look and the name and model nr. are no longer stamped into the sleeve ring.)

B) Support products 'Made In USA'.

Ok, this was my two minute rant. Tnx fer listening.

Ain't nuttin sacred anymore, Brother!

I expect at least one of my grandkids to be "Assembled (by a)
Mexi(can)" based on dating habits of the middle daughter. Oh well...

Jim, you gotta give tinyurl a try. Just go to http://www.tinyurl.com,
and copy and and paste the long URL in the field provided, and it will
make a tiny url for ya! Then put that in the message. All free

I'm sure you have a better amp than the 30L-1, "Buzz".

Your need to have the last word is noted.

I dunno where they're made but the Wireman's silver-Teflon PL-259s (P/N
1103) are 'waaay better'n the Amphenols and they're only $1.50 a pop.

> No, they're not.

Nor merit badges. The Amateur Radio Service is not the Boy Scouts.
The FCC is not BSA Headquarters.

> But they ARE in the business of making sure that thier rules
meet
> the test of the enabling regulations.

They should start with the "rule" requiring a Morse Code Exam at 5WPM
refer to another "rule" defining Morse Code and how to derive a 5WPM
rate. Then then need to explain how a 13-15WPM character rate can be
legal for a 5WPM exam. Or not.

> Part 97.1 establishes the Basis and Purpose of the Amateur Radio
> Service. The B&P continues to establish an expectation of self
> training and communications skills that prepare the licensee to meet
> the needs of the B & P.

The Basis and Purpose does not specify your favorite mode as the one,
true path to rightiousness.

> So...Until Part 97 is altered per process otherwise, Morse Code
is
> still required for access to HF allocations.

5WPM. Not the 13-15WPM exam currently administered by the ARRL and
W5YI VECs.

> And as Jim noted, so far, the overwhelming opinion of those who
> have cared to express an opinion is "Morse Code skills are
> needed"...Even if Lennie says they aren't...
>
> 73
>
> Steve, K4YZ

Then Jim and his commenting cronies march to the beat of a different
drummer. The ARRL's scientific survey of 1998 said that there was no
clear concensus. Since then the ITU has eliminated the requirement for
a Morse Code Exam for HF access.

> > in 2000.

Where and when did the FCC note that?

There have been 5 wpm hams with General, Advanced and Extra class
licenses since 1990 (medical waivers).

> > Trouble spots like 14.313 predate that by many
> > years.

And for many of those years, FCC did very little enforcement
on the ham bands. Those problems were allowed to exist for
years without FCC doing much of anything, despite
complaints.

> > So 13 or 20wpm doesn't serve a regulatory purpose,

What mode are those folks on 14.313 using? Hint: It's not
Morse Code!

Recently an overzealous ham sending code practice 24/7
was the subject of an FCC enforcement action. Guy was
sending Bible verses (which isn't a rule violation) but
didn't answer FCC letters about his method of station
control (which is).

You've got to go back years and years to find another
enforcement action of similar magnitude against a
ham using Morse Code. Compare that to enforcement
actions against hams using voice modes.

> > and
> > the FCC isn't in the business of handing out "gold star"
> > awards.

20 wpm is hardly "gold star" performance.

And if that is the case - would you support dumping the General and
Extra class licenses, and giving all privs to everyone with a Tech or
higher?
>

I didn't say "overwhelming opinion". I said "majority opinion". *BIG*
difference.

Don't need an amp "steveieboy", 100 watts with the KWM-2, a good antenna, coupled with good operating practices and I can talk to anyone I can hear. Unlike you "cb freebanders" who think the only solution is to splatter the spectrum with lots-o-power.

It -is- a rules violation if he is sending the bible verses to no one
in particular, thus the FCC letter.

§97.113 Prohibited transmissions.

(b) An amateur station shall not engage in any form of broadcasting,
nor may an amateur station transmit one-way communications except as
specifically provided in these rules; nor shall an amateur station
engage in any activity related to program production or news gathering
for broadcasting purposes, except that communications directly related
to the immediate safety of human life or the protection of property may
be provided by amateur stations to broadcasters for dissemination to
the public where no other means of communication is reasonably
available before or at the time of the event.

I'd say that's more like a maybe rather than a yes.

> Are there
> thousands of hams that could pass the General or Extra theory trapped
> above
> 30 MHz? Yes.

There are no hams "trapped above 30Mhz.

> Will there be a large increase in HF use? Yes.

That is also a maybe. If the code is dropped this year, many will buy the
rigs and try it but may be sadly disappointed in the results since we are in
the trough of the sunspot cycle and results are so often poor right now.
They may not stick with it until conditions improve since they won't have
the skills to participate in the second most used mode of shortwave
communications.

Abolishing the requirement would have meant that all countries would have
had to drop code testing. That is not what the ITU did.

In what ways is the code test a nuisance to the FCC?

Why not simply cancel their licenses unless they take the upgrade exam by a certain date? It gets rid of the closed classes yet gives no one a freebie. Those who are active or care about their license but are inactive due to circumstances in their lives currently will upgrade. Those who don't care won't be any great loss. Let's shake the dead wood out of the tree and find out how many hams we really do have.

You STILL haven't told us what you were doing and what Hollingsworth said about it. Freedom of speech has NEVER meant that you can say anything you want, whenever you want, where ever you want, and however you want.

Before anyone can agree with you, they need the precise data to evaluate. The continued lack of data would tend to imply that you are aware that you are in the wrong.

There are only 5 words sent in each minute of time. There are no tests
being administered at this time in the ARS where more than 5 words are sent
in one minutes time.

>

Used to be the waivers for 13wpm, but that's no longer.
And in another sense, as VEs do all the testing, any of
the tests are of little nuisance to the FCC. Every so
often some VEs cheat, but that's another issue.

As for what knowledge should be tested for, as we are
allowed to modify/build/hack our equipment we should know
how to determine performance of our transmitters and such
so we don't splatter/trash the RF spectrum. Also TVI issues.
Also need to know safety issues, high voltage and RF.
Rules and regs, what constitutes deliberate interference
and what is just life on a crowded band. That ham radio is mostly
2 way comms (no broadcasting, no music). 3rd party rules
and such for HF access licenses.

Heard it said that the FCC finds that hams are for the most
part well behaved and don't require much enforcement actions
compared to other services.

Farnsworth method. 13wpm characters sent at 5wpm spacing.
Supposedly you start newbies like this and soon they can
handle faster code than if you used slow 5wpm characters to start.

Exactly! All FCC does is approve new questions for the pools.
VEs and QPC do the grunt work.

All of that is tested for in the Technician exam, isn't it?
Techs have all amateur radio operating privileges above 30 MHz,
so all that stuff must, by definition, be contained in the
35 question Technician written test. Even some HF stuff must
be in the Tech test because Techs who pass or have passed
Element 1 get some HF privileges.

In fact, FCC *decreased* the written exam for Tech back in 2000 by
about 46%.

> Heard it said that the FCC finds that hams are for the most

> compared to other services.

Probably true - because hams tend to follow the rules even if no one is
watching. A big part of that is tradition and the 'culture of values'
in amateur radio, IMHO.

Since "citizen band freebanders" would be an oxymoron (freebanders usually
operate out of the citizens band), I must assume your "cb" refers to
"criminal boys" - or something worse for the "b" letter.

Not so. Abolition of a requirement doesn't stop any member state from
retaining it, so I repeat, there is no difference between abolishing a
requirement and making it optional. An optional requirement is not a
requirement, and thence a nullity.

Cancelling is a bit harsh. Maybe they could be downgraded at the next
renewal after say three years notice up front. Of course, for Novices that
would mean cancellation, but I seriously doubt whether there are any active
Novices?

Like the old Novice..

> It gets rid of the closed classes yet gives no one a freebie.
> Those who are active or care about their license but are inactive due
to
> circumstances in their lives currently will upgrade.

I still remember the screaming from 1968 when "incentive licensing"
went back into effect. What you propose would be worse.

>Those who don't care
> won't be any great loss.

There's also the group who don't know. It's almost 5 years since
restructuring and I still read/hear questions from hams about what the
license structure and test requirements are, particularly from inactive
or narrow-focused hams.

> Let's shake the dead wood out of the tree and find
> out how many hams we really do have.

What good would that really do, Dee? If nothing else, it would give
folks like the BPL companies ammunition against us.

Wow, good point, Dee! When I first got my license, the band conditions were very good on average. The "work the world on a wet string" days. Now 20 meters is usually half dead around 7 p.m. and the broadcasters are starting to flood 40 meters. So a new HF'er is going to wonder just exactly what those new privileges are worth. As the sunspot cycle winds down, the conditions are only going to get worse. 80 meters will be a crowed pool for the next few years.

Personally I think that anyone who is feels trapped by having to learn Morse code will feel equally or more trapped when they discover what they have to do to get a good signal out on 80/75 meters!

Maybe they can get the F.C.C. to repeal those stupid propagation conditions! 8^)

What? You don't KNOW? All PCTAs KNOW things EXACTLY!

:-)

>> Are there
>> thousands of hams that could pass the General or Extra theory trapped
>> above 30 MHz? Yes.
>
>There are no hams "trapped above 30Mhz.

Riiiiight, Mama Dee. Nobody is trapped. No-coders are NOBODIES.
:-)

>> Will there be a large increase in HF use? Yes.
>
>That is also a maybe. If the code is dropped this year, many will buy the
>rigs and try it but may be sadly disappointed in the results since we are in
>the trough of the sunspot cycle and results are so often poor right now.

Sorry, Dee, you can't be right unless you give the EXACT number.
"No one will believe you if you don't give us the exact data." :-)

Riiiight, Dee, the "only" purpose of HF is "to work DX with CW."
:-)

>They may not stick with it until conditions improve since they won't
have
>the skills to participate in the second most used mode of shortwave
>communications.

Wow, all that struggle just to be "second best!" Such "incentive!"

Gots to "work DX on HF with CW." On "shortwave!"

BTW, the rest of the radio world uses the term "shortwave" to refer
to small wavelengths measured in centimeters. It's in all the trade
magazines. Oops, I forgot. Real hams don't read industry trades.
The only approved publications about radio come from the ARRL.

Work, struggle with all one's might to become "second best." :-)
Mediocre is the word. Or, to keep the "CW" bandplan open as an
olde-tymer's playground/sandbox to keep their righteousnesses
happy. "Real" radio operators do "CW." All important, vital,
necessities, righteous. Get and keep federal LAW to TEST all
hobbyists operating below 30 MHz or the sky will fall!

right.
>>
>You STILL haven't told us what you were doing and what Hollingsworth
said
>about it. Freedom of speech has NEVER meant that you can say anything
you
>want, whenever you want, where ever you want, and however you want.

Except in HERE... :-)

>Before anyone can agree with you, they need the precise data to
evaluate.
>The continued lack of data would tend to imply that you are aware that
you
>are in the wrong.

All must agree (wholeheartedly, down to the core of their being)
with
traditionalist conservative standards and practices of the 1930s as
preached by the Church of St. Hiram or they are WRONG, WRONG,
WRONG!!! The Church can say anything but all who speak against
their religion are heretics who should be burned at the stake!

Ho hum...all the usual pseudo-religious harangues by the PCTAs
with their usual self-righteousness. :-)

Lots of that false idol worship going on in here...

Guess who used to remark that Boy Scout leaders are pedophiles?
:-)

Can't have any pedophiles in ham radio, no sir! All hams must be white males of deeply-rooted conservative everything rigidly preserving the traditions, standards, and practices of the 1930s.

>> But they ARE in the business of making sure that thier rules meet
>> the test of the enabling regulations.
>
>They should start with the "rule" requiring a Morse Code Exam at 5WPM
>refer to another "rule" defining Morse Code and how to derive a 5WPM
>rate. Then then need to explain how a 13-15WPM character rate can be
>legal for a 5WPM exam. Or not.

I rather think that the FCC (that all-powerful adjunct secondary to
the real leader of American ham radio, ARRL) cares much about
a bunch of amateurs fooling around in a hobby activity. It's been
nearly two years since the first of those 18 petitions arrived at
the
FCC and the conservative-traditionalists mounted much cross-fire
to those nasty radicals wanting dirty, rotten change (hack, ptui)
from divine, blessed, noble olde-tyme regulations. Code MUST
stay! It is "right!" :-)

[both guys at the FCC prolly threw up their hands and pigeon-
holed all 18 while they concentrated on other things in their
apprenticeship duties there]

>> Part 97.1 establishes the Basis and Purpose of the Amateur

Avengining Angle is a PCTA extra! He always Right, never wrong.

>> So...Until Part 97 is altered per process otherwise, Morse Code
is
>> still required for access to HF allocations.
>
>5WPM. Not the 13-15WPM exam currently administered by the ARRL and
>W5YI VECs.

Irrelevant to the PCTA extras. Code test IS THE LAW!

[no one, repeat no one, is allowed to change the law!]

>> And as Jim noted, so far, the overwhelming opinion of those who
>> have cared to express an opinion is "Morse Code skills are
>> needed"...Even if Lennie says they aren't...
>>
>Then Jim and his commenting cronies march to the beat of a different
>drummer.

The Avenging Angle marches to an even stranger drummer...
he thinks I'm here and commenting, saying things even when
I'm not. Weird. He wired. Wired up differntly than others, always
in overload conditions, no fusing. Tsk. [I been off for several
days]

Jimmy Who and cronies have had their craniums dutifully
washed years ago, thinking that morsemanship is a vital,
needed skill to "operate" any radio on HF or below. They had
to take a morse test so EVERYONE has to take a morse
test forever and ever to be allowed in a hobby activity.

>The ARRL's scientific survey of 1998 said that there was no
>clear concensus. Since then the ITU has eliminated the requirement
for
>a Morse Code Exam for HF access.

ARRL's only "science" is that of trying (vainly) to get more
members and to keep the Hq staff on the payroll by selling
lots of ham publications. Their publishing business is still
working well but the membership numbers are rather
stagnant at old numbers.

The ITU-R overhauled and revised nearly ALL of S25 at
WRC-03. One revision allowed individual administrations
the option of keeping their code tests or eliminating them.
The mandatory requirement of a code test for privileges
below 30 MHz was removed, but the OPTION remains.
There's no "necessity" of any logical or legislative kind
to keep the code test in U.S. regulations except in the
fantasies of olde-tyme conservative traditionalist hammes
who psychologically need the rank/status/titles of high-
rate code-tested extra to show they are "better" than
others. They need federal subsidies for the righteousness,
all at the expense of newcomers who aren't coming in
under their shining glory of ham greatness.

I see.

You have a problem with "majority rules". Just like the
"insurgents" in Iraq who are scared to death, not of American military
might, but of the piece of pater in the ballot box.

You HAVE demonstrated cowardly characteristics...This just
confirms it.

> radio.

One of your points that may be hidden in all the text, yet is critically important IMO, is the part noting that while removing the Morse test completely for one license class, and reducing it to 5wpm for the others, we have managed only a very modest increase in numbers (note that this was an "at the time" thing.

As the future would pan out, we have lost numbers, and a lot of them the Non-coded types.

As a ship that is almost stopped proves, turning the rudder does almost nothing, or when the interest rate goes very low, adjusting it does almost nothing, eliminating the 5WPM Morse code will have no positive effect on the numbers of new hams, and the most likely effect will be that with the lesser effort, more and more will get into the hobby with only slight interest, and then drop out. That is not what we need.

Hey, do I get a prize for that freakin' long sentence?

> Gots to "work DX on HF with CW." On "shortwave!"

Those of us who care to will. How are you involved?

> BTW, the rest of the radio world uses the term "shortwave" to refer
> to small wavelengths measured in centimeters.

That's simply incorrect. The term has been defined and understood for
many, many decades. If some Johnny-come-lately wants to act as if he

has just invented the terms "shortwave" or "wireless" let him join you
in looking like a complete boob.

> It's in all the trade
> magazines. Oops, I forgot. Real hams don't read industry trades.
> The only approved publications about radio come from the ARRL.

Real hams may read anything they choose and even a non-ham like yourself
may look at QST.

> Work, struggle with all one's might to become "second best." :-)
> Mediocre is the word.

You whine and whine over a measly five wpm morse code test and you dare
write of mediocrity? :-) :-)

> Or, to keep the "CW" bandplan open as an

Why, Leonard, you're the biggest, clay-footed idol in here and I don't see anyone worshipping you. You aren't involved in regulating amateur radio.

You aren't involved as a licensed ham. You aren't involved in manufacturing equipment or antennas for radio amateurs. Yet you presume to annoint yourself as advocate for something-or-other in an avocation in which you have absolutely no stake. Go figure.

Can you clear this up for us, Leonard? Are you actually FOR pedophiles
in amateur radio or anywhere else?

There are hams of different races, genders, political philosophies and
economic backgrounds. You aren't among them.

The FCC is an agency. An agency doesn't think. There are people
employed in it who do that. I'm pleased that you believe the FCC cares
about radio amateurs though.

These demented rants of his grow more strange by the week. His factual errors are numerous. The legion of lurkers which he claimed would rise to the defense of his ideas never materialized and he's irrelevant to amateur radio in this country.

Leonard really needs a new cause.

I'm not a lurker, but I will say that Lennie is right. Granted I'm not sure
why he's still here, since he could obviously pick up a no-code licence any
time he feels like it and doesn't seem to want to get on HF anyway?
However, his satirical comments, whilst over the top, seem to be right on
the money.

There are a few though they are very few. I was looking at vanity call
signs recently issued on some site or another and there was even a Novice
who had received a vanity call. Since he/she was restricted to a 2x3 call

there must have been some other reason that they wished a new call.

They wouldn't be screaming any louder than those opposed to automatic
upgrades would be. Any change from the current will cause major screaming
other something like closing the classes to new licenses as was done in
2000. Personally I happen to think leaving the classes alone is the best
thing.

>

Well the FCC expects hams to keep up with the rules or they send them greeting cards if the violate the new ones. This wouldn't be any worse. It could be handled by specifying that they must upgrade by their next renewal. If they forget to renew, they loose their license anyway. Those who do attempt to renew could get a form stating that they must upgrade instead. Afterall, they will have the remainder of their term plus the grace period (which I would keep) to use their existing license for the appropriate elements.

>> Let's shake the dead wood out of the tree and find

It makes no less and no more sense than "auto upgrades." I don't particularly put it forth as a serious suggestion. Too many people are simply yakking on about the "burden" and "confusion" engendered by retaining these close classes so chose to describe an alternative. I just threw in the "deadwood" part since some people are so worried about the number of hams and the accuracy of the numbers.

Fortunately I only see Len's idiotic comments when someone replies to them. Notice how he has inserted material that wasn't even there. I've worked plenty of non-DX stations on HF. He ignores the fact that the same propagation principles apply to domestic and international communications.

I am also amazed at how he keeps flattering me by using the term "Mama Dee", since this is the most important job in the world for any woman with children. He probably intends for it to be derogatory but has failed miserably in that regard.

Whichever location, he is perpendicular to reality, poor guy.

He's terribly worried about growing old, HATES anyone who
survives. Tsk. Doesn't realize that he isn't "young' anymore.
Amateur radio ceased being "young'" years ago, but most of
the olde-tymers in here want terribly to freeze everything to
the state of things as they were when they entered the hobby.
Can't be done but they keep trying. Their own self-delusion.

The start of this subject thread was an obvious troll to make an
ancient, primitive communications method "high tech" by giving
it a "digital" adjective. That can't be done either, but those
self-righteous etymologists think that re-definitions will make
them "high tech," too. On-off keying is still just on-off keying,
whether from a battery in 1844 or an expensive, bells-and-whistles
radio made in 2004 turning its RF carrier on and off. They've
gotten brainwashed into believing that it's some kind of "basic
skill" that is terribly vital and needed to operate below 30 MHz.
Dumb.

They don't realize that, as you said, "morse code gets through
when everything else will." :-)

"Real hams know morse!" Maybe some of those PCTA extras
deserve a new class designation: "Real."

That's really Imaginary, of course, but trying to make them
understand reality is very "complex." :-)

Lennie, please remind us how this is pertinent to the Morse Code Test issue that you constantly whine that no one will "debate" with you, yet a thread was created just FOR you and all you do is cuss and call names?

> He's terribly worried about growing old, HATES anyone who
> survives. Tsk. Doesn't realize that he isn't "young' anymore.

I'm younger than you. ALways will be, regardless of how old I get. Mainly because when there's something I want to do, I go do it...Not whine and cry about how someone else is supposedly holding me back.

Your OWN "self-delusion", Lennie...exacerbated by your complete lack of practical experience in the program.

> That's really Imaginary, of course, but trying to make them
> understand reality is very "complex."

What's complex about "Leonard H. Anderson of Sun Valley California is a pathological liar, antagonist and deceitful putz"...?!?!

Pretty straight forward from our perspective.

So...You were complaining that there was no thread for discussing Morse Code Test issues, and yet your only post there was a lame excuse for calling names, Lennie.

Why did you lie about your "desire" to carry on further "debate" on Morse Code, Lennie?

(I have the answer...It's easy for a pathological liar to lie! It really is THAT simple!)

Putz!

That's right, it'd be Leonard Anderson. Our "bb" often plays Little Sir
Echo to Len's rants.

"Satirical comments"...?!?!

BBBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HA!
! ! ! ! !

Lennie left "over the top" years ago and went straight to "over
the edge".

Lennie Anderson has been REPEATEDLY proven to be a L I A R, Alun.
Not "wrong"..."Wrong" is when you make a mistake, and when it's pointed
out to you why it's wrong, you acknowldege it and move on.

Leonard H. Anderson of Sun Valley Californis is a liar. Period.

He's NOT a satirist, and there's nothing comical about his insults
and deceptions.

I know of three local novices that are on ten meters every night. That's all they want. They have no need for VHF and are just happy with what privileges they have now.

It is obvious to me now. Toddy is retarded! Or learning disabled, whatever you want to call it. Look at the way he writes, and his stupid rationalizations, his incredibly stupid opinions, plus the fact that he does not learn anything...he has not learned that he will never have an audience...in spite of the fact that he stated that he has been a ham for 14 years! The ham tests have been dumbed down to the point where even a retard as stupid as Toddyboy can hop into the hobby and get a license! Well paint me pink and call me Berry! I never thought I would see the day when we had to deal with retards in ham radio. Five year old kids can pass the extra. Stubborn older retards like Toddyboy are allowed onto the bands to spout a nonsensical informational bulletin show when they cannot get a BC license...he said he applied for one SEVEN times? At least the FCC will not give a BC license to a retard. He is too stupid to realize that the only audience he will have on the ham bands is a handful of hams.

Thankyou. I think the point of Len's little tirade was that some here seem
to be opposed to change at any cost, and that certainly has a ring of truth

to it. Of course, he may have expressed that in a very sarcastic way, but that doesn't mean he's necessarily wrong.

So that's where they are! Let them have Tech privileges and they'll stay right where they are anyway, right?

Actually, I think there should be as few different licences as possible, and that inevitably involves merging licences. I don't think that 'automatic upgrades' are a problem, as those affected all have 'time in grade'. On reflection, I don't favour downgrades.

There is nothing inevitable about it. Time will take care of the matter.
There is no reason for either automatic upgrades or downgrades. It is no
particular additional burden to anyone to leave it as it is. There are only
three possible classes for new or upgrading hams. That seems about right to
me. Even when I originally licensed and passed through all five levels, I
thought three would be more appropriate.

Toddy. Do me a favor. Take your goddamn fingers out of your ass, buy a 26 foot Butternut vertical and shove that up your ass instead. Then, get a big 2KW linear, hook it up to your HW-101 and hold the key down for a few minutes, you asshole.

Of course he places me in that group also. Solely on my support for the
Element 1 test. The picture he paints of me is nowhere near the truth.
But broad brushes paint broad swaths, and apparently if a person is in
favor of a Morse code test, it is then mandatory that they are a
Morsodist, an "Olde Tyme Hamme" and in favor of the "Archaic
Radiotelegraphy Society, right? No other possibility exists?

It is one of Len's "over the top" satirical comments (to the FCC). I
take it that you aren't in favor of pedophiles in amateur radio either
then.

> under his belt. :-)

You have more than seventy years under your belt and above it. How has your speech been suppressed, old timer? Have you not written what you wanted here, whether it was true or not? Have you not provided your invalueable input to the FCC? Perhaps you feel that we should all bow our heads and murmer an "Amen" to anything you, an outsider writes of amateur radio? Pssssst, Leonid! That isn't likely to happen.

Amateur radio today isn't much like it was when I entered in 1963. Many things have changed, some for better, some for worse.
One thing hasn't changed though. You weren't involved then. You aren't involved now.

Len really doesn't believe that morse code comes in second in either
category. It wouldn't appear that whatever he believes has effected
radio amateurs at all. He isn't involved.

Hey, I JUST FOUND THIS OUT- get this - everybody: Toddy works at WAL-MART!!! At least he did until he was FIRED for IMCOMPETENCE!!! He tried to work there as a STOCKBOY!!! I mean, putting the shit on the shelves! Unloading the truckloads of cheap chinese made shit and putting it on the shelves so that all the morons that run into the store can buy it!!! What an idiot!!! How in the hell can you live on Wal Mart wages, let alone assemble a decent ham station, or broadcast station??? I found out that they didn't even want him to do that, so they tried to get him to clean up the back room!!! This is while he's telling sen. McCain that he is president & CEO of Bumblefuck Telecommunications.

For someone that supposedly has a high IQ (yea right, sure you do) you certainly haven't learned how to express yourself without those little jr. highschooler words, you can't spell and can't put together a decent sentence.

Alun, you must understand that Robeson's name-calling is a long-
established habit of his, his own defense against not having a valid
opinion/comeback on the subject in a thread. He goes for the
Personal Attack and then loses his objectivity in his own insults
while manufacturing "issues" that aren't there.

I could post my own reasons for advocating the elimination of the
morse code test every week and the opponents (PCTA extras
all) would simply say I am "lying" and have "ulterior motives."
The PCTA extras do that ANYWAY! :-)

This "charge" that "I advocate a minimum age for amateur radio"
comes out of my Comment on docket 98-143 that was filed at
the FCC on 13 January 1998. [still on file there in the ECFS]
I submitted it via surface mail (appropriate copies per
instructions)
and then didn't follow it up. My Comment was 14 pages long and
that item was on the last page. Over a year after that filing, one
in here tried to make that a "cause celebre" as if it were
tantamount to Treason against the State! :-) Tsk, tsk. Once
that is done, some want to use that capital-crimes charge when
they can't think up enough false charges of damnation. :-)

By the way, that "charge" came out of a news item on the
ARRL web page which featured "the youngest hams," two
SIX YEAR OLDS who "passed their written exams" for
Novice and Technician classes, respectively. Uh huh. :-)
Uproar from the PCTAs followed, a whole fantasy scenario
of child prodigies (if they took ham exams) and a lot of sub-
threads of how the PCTA's children were also superior. :-)

FANTASY is a very big thing among the PCTA. All seem to
think they are somehow "pioneering" the airwaves by using
morse code...well after the actual pioneering was done before
their time. Morse code is demanded of all newcomers on some
imaginary need of "showing dedication and committment to
the amateur community!" :-) That continues with labels of
"Real" hams know morse! Those hams who haven't been
federally tested for morse code are "inferior" and apparently do
not deserve their licenses. :-)

>Of course, he may have expressed that in a very sarcastic way, but
>that doesn't mean he's necessarily wrong.

My "expression" in here without the false facade of gratuitous complements to the "superiority" of the olde-tymers. :-) They cannot stand anyone who's been deep into radio for a long time, done a lot, yet doesn't subscribe to their fantasies.

Robeson has seemingly real fantasies (to him its not an oxymoron) and imagines conditions which didn't exist with others, then he expands on those as if it were reality. It isn't. A case example is his claim that he can simply lift a telephone, call authorities, and have anyone picked up on the strength of his professional qualifications in medicine! That's absurd. Few physicians have such power. Nurses do not. Yet Robeson insisted in here that he could have Brian Burke put away with such a call. Tsk. Such exaggeration carried braggadoccio over the brink into some sort of mental imbalance due to its irrationality. [just one example out of many]

Another syndrome is his "mirror" postings. If he is called on some of his charges (such as constant name-calling as a message ending salutation), he turns around and accuses those who called him on his charges for doing the same thing! That is on-going in here, the "mirror" postings delayed by perhaps a week or slightly more, but they DO appear. In one way, interesting to watch the psychosis develop. Sort of a field example in psychology classes.

Heil is guilty of some of the same, although he may just be trolling for word-fighting. Both Heil and Robeson MUST triumph in the word-fights, will never ever admit to any wrong-doing and always try to turn around things so the other party is at fault. It's always about personalities and the subjects are "right" if they mirror the ARRL words, "wrong" if they are contrary to the holy ARRL words. :-)

The pro-code-test-advocates are simply Believers in their self-righteous attitudes, long ago brainwashed into their little world of radio fantasy. They are fanatics, almost as fedayin ready to suicide-bomb anyone who speaks against their idolatrous ideals. Perhaps their fanaticsm makes them so angry and hateful?

Their anger and hate does not bode well for a hobby, an avocation, something done for personal enjoyment. They don't realize that since their self-righteousness blinds them.

There's a morbid fascination about their actions. :-)

"Big badass Dave"

"not wearing the SS uniform with twin lightning bolts but otherwise
acting like a downsized Gestapo veteran"

"The Avenging Angle"

"concerning the Avenging Angle's further adventures in 'waste of time'"

"Jimmy Who and cronies"

"Dee Flint had a hissy fit on Thurs, Mar 3 2005 11:59 pm and hastily
scribbled the following diatribe"

"'Dee Flint' (calmed down from a previous hissy fit) jumped into a
so-called conversation and shouted out"

"Go join Mama Dee who wants to 'punish' her 'children' that don't do
what they're told!"

"Mr. Glock likes it...it's nice and shiny"

"My representative Mr. Glock will address them in that case. [he is
very accurate]"

"If the Coslonaut thinks Smith Charts are obsolete"

"Idiot. I 'looked it up' a long time ago."

"when some insufferable, self-righteous 'mama' wants to 'discipline
children as parents do'"

"Tsk. I'll bet Kellie told that to the Captain at dinner. Too bad
Tenille wasn't there"

"Poor Dan never got his crypto clearance"

"Widdle Stebie gonna have me BANNED from here"

This sampling from the past couple of weeks of r.r.a.p. were all written
by Leonard Anderson, the guy who "goes for the Personal Attack and then
loses his objectivity in his own insults while manufacturing 'issues'

that aren't there".

It matters not when it was written nor does it matter that you didn't follow it up. It matters that you wrote it. You've never disavowed it or asked that the FCC disregard it. The charge was made because it is absolutely true.

> By the way, that "charge" came out of a news item on the
> ARRL web page which featured "the youngest hams," two
> SIX YEAR OLDS who "passed their written exams" for

Uh huh. Those two kids did something you've never done. It chafed you then. It obviously chafes you now.

> Uproar from the PCTAs followed, a whole fantasy scenario
> of child prodigies (if they took ham exams)...

You tap danced then as you are tap dancing now.

> ...and a lot of sub-
> threads of how the PCTA's children were also superior. :-)

Now you wouldn't want to be presented with any facts that would give lie to the statement above, would you?

> FANTASY is a very big thing among the PCTA. All seem to
> think they are somehow "pioneering" the airwaves by using
> morse code...

I don't know of a single soul here who has ever made that claim or anything near it.

Don't worry about it too much, Leonard. You don't have an amateur radio license to deserve.

> My "expression" in here without the false facade of gratuitous
> complements to the "superiority" of the olde-tymers. :-)

Is there supposed to be a sentence buried in there somewhere?

> They cannot stand anyone who's been deep into radio for a
> long time, done a lot, yet doesn't subscribe to their fantasies.

I'll grant you that anytime you show up, it is deep.

> other party is at fault.

Let me ask you a couple of plain question to see if I can get some straight answer from you, Len. When is the last time that you ever admitted to any wrongdoing in here? When is the last time you were involved in a scrap here in which you didn't try to turn things around so that the other party appeared to be at fault?

> It's always about personalities and
> the subjects are "right" if they mirror the ARRL words,
> "wrong" if they are contrary to the holy ARRL words. :-)

I don't need the ARRL's input to tangle with the likes of you. You simply aren't involved in amateur radio.

> The pro-code-test-advocates are simply Believers in their
> self-righteous attitudes, long ago brainwashed into their
> little world of radio fantasy.

Do you believe in your self-righteous attitudes, Len? How about the little world of radio fantasy you've built in which you see yourself as being involved in amateur radio? Have you been brainwashed?

> They are fanatics, almost as
> fedayin ready to suicide-bomb anyone who speaks against
> their idolatrous ideals.

Are you demented? How much of a fanatic would one have to be to spend years in jousting with participants in an avocation in which you have no part?

> Perhaps their fanaticsm makes them
> so angry and hateful?

Izzat how you turned out the way you did?

Todd, you've gone from being thick-headed to being annoying. If typing fast is your problem, why not slow it down so that your posts are coherent? I can't make sense of much of your stuff. My mommy wouldn't be able to make sense of it. It is disjointed, poorly punctuated, misspelled crap. Writing it in all caps won't help it make sense. Repeatedly claiming a high IQ won't help it. Want to show us how bright you are? Leave out the swearing and see if you can make yourself understood.

As to talking to us, you don't have to do that at all. It should be apparent to you that nobody here supports your broadcasts/information bulletins. Your several recent posts aren't doing anything to win you support.

What kind of question is that? I don't think issuing licences to children makes much difference from that angle. When someone is on the air they are in a public place.

Absolutely no one has ever said information bulletins are illegal. So long as they meet the requirements of Part 97 there is no problem. However from your description of the content, they appear to be op ed pieces rather than information.

Maybe "Todd" can sell time on his "broadcast" so Lennie can get
some mike time.

Other than Part 95 or Part 15, it will be the only way his voice
ever hits the airwaves.

Even the unlicensed have the same oppotunities...It's just that
SOME of them don't ahve the cajones to take the test...Mostly becasue
it's illegal to take the test open-book.

Lennie couldn't do it otherwise. He keeps making significant
error-of-fact even when he has plenty of opportunity to "get it right"
before he posts in here...pity that!

> >> Riiiight, Dee, the "only" purpose of HF is "to work DX with

communications.

Ironic that Lennie claims that he's such a brilliant engineer.

Lot's of NON engineer types have some very enviable "DX" records
never operating below 144MHz, let alone on 50MHz. Quite a few DXCC's
awarded for VHF operations.

THAT takes skill...perseverence...knowledge...determination.

In other words...characteristics Lennie lacks.

> I am also amazed at how he keeps flattering me by using the term
"Mama Dee",
> since this is the most important job in the world for any woman with
> children. He probably intends for it to be derogatory but has failed

> miserably in that regard.

You'll fogive Lennie's mock-derogatory attack on your gender, Dee.
Lennie's own female significant other wouldn't favor him with
offspring, hence most of his angst vis-a-vis women, and I assume his
misdirected attack on pre-teen licensure in Amateur Radio (no practical
experience in child development).

He even digs in pretty deep on Kim who's own position on many
issues actually parallels his own. Ya gots ta wonder why he would
publically slap around a potential ally.

These
> two phrases have entirely different meanings.

Lennie has a LOT of trouble distinguishing between a LOT of
things, Dee...

Like "truth" and "mistruth". They are interchangeable in Lennie's
world.

And if he were a licensed Amateur, Lennie would know how much
significantly more challenging it is to obtain a DXCC above 50MHz than
below it.

Makes those who do it a lot more remarkable in my book...

Mediocrity kept Lennie away from at least one "aerospace" job I
know of.

No doubt it kept him from others too.

But he DID "have his hands in" several "aerospace" jobs...No doubt
some of the early Vanguard missions and at least one Space Shuttle
mission.

> >> Or, to keep the "CW" bandplan open as an

Leonard.

Ironic then that the ONLY "CW bandplan" is in V/UHF spectrum,
huh...?!?!

(Lennie and Brain call me "nuts", but then they keep making
assinine assertions in the face of well known, publically accepted
standards to the contrary of thier "understanding" of
things...Sheeeeesh...)

It's mathematics, Alun.... A = B = C.

You made statements approving of Lennie's "satirical" comments.

Lennie approves of a minimum age for Amateurs and has made (very
poorly worded) statements that appear to suggest he approves of
pedophiles in Amateur Radio. (I doubt he supports pedophilia, however
he WOULD support ANYthing that could blacken Amateur Radio's public
perception...)

Therefore you approve of a minimum age and pedophiles in Amateur
Radio.

I have every reason to doubt that you do support a minimum age for
Amateurs and I'd be shocked if you support pedophilia, however this is
a very clear example of why it is NOT possible to "have your cake and
eat it too" with regards to "free speech".

Lennie made some really idiotic comments vis-a-vis the presence of
pedophiles in Amateur Radio. I would HOPE that he didn't mean for
things to come out the way he said, although it's NOT in his nature to
back away from even the stupidest things he's done.

Lennie has also out-and-out lied over and over again vis-a-vis
Amatuer Radio and his personal "achivements".

And again, YOU stated that his comments were "over the top", but
were right on spot.

So....Would YOU care to retract or modify any part of your
declaration of "support" for Leonard, or was it indeed your intent to
"support" his mistruths, outright deceit, poor grammar and verbal
mayhem upon Amateur Radio...???

2330. INTERNATIONAL SPACE STATION LIVE ON ECHOLINK MARCH 8th TUES 1410GMT

Newsgroup: rec.radio.amateur.policy
Date: 2005-03-06 14:37:46 UTC
From: g3zhi@hotmail.com
Message-ID: <422e1595.1051739@news.btinternet.com>
Source record: 103796

INTERNATIONAL SPACE STATION LIVE ON ECHOLINK MARCH 8th TUES 1410GMT

The next International Space Station's Expedition 10 ARISS school contact will be with students at Rains High School in Emory, Texas on Tuesday, 8 March 2005. The event is scheduled to begin at approximately 14:10 GMT.

This contact will be a telebridge between stations NA1SS and WH6PN in Honolulu, Hawai'i, so it should be audible to anyone in the areas of the Pacific near the islands listening in on the 145.80 MHz downlink. The participants will conduct the conversation in English.

"Rains High School, a county school located in one of the smallest counties in Texas, is comprised of mostly low-income students who often do not get the opportunity to participate in enriching programs. The opportunity to talk with the astronauts on the International Space Station will expose our students to a world that exists beyond the boundaries of Rains County. The questions asked of the astronauts and the ideas generated by the answers will be used as jumping off points for further discussion and research."

Audio should be available for this contact Via EchoLink in the following conference rooms:
AMSAT node 101377
EDU_NET node 77992
See further notes below
Via IRLP Reflector REF9307 starting at 14:00 UTC
REGISTRATION REQUIRED (see below)
Via the internet:
URL: https://e-meetings.mci.com/
CONFERENCE NUMBER: 6037948
PASSCODE: SPACE STATIO

Students will ask as many of the following questions as time allows:

1. How would a baby's development in the womb differ if the mother were in space?
2. What do you think will be the greatest technological advancement that will come out of the research you all are doing now?
3. How do you monitor your radiation exposure?
4. How did you adjust to Newton's third law of motion while in space?

5. Since you have been in space so long, have you had the
opportunity to notice changes that have occurred on the surface
of the earth from your perspective?
6. You have learned a lot of science, but what was the one thing
you did or experiment you performed, while in space,
that you remembered reading or studying about in school, that made
you say, "Wow, it really does work that way"?
7. Do you think people will be able to spend the rest of their
lives living on the space station?
8. Could a sphere large enough to let a small fish swim in it be
formed in near gravity and could a fish actually swim in
it?
9. What is the material used on the space station and how safe is
it from space debris?
10. Are there any lubricants on the space station and if there are,
how are they affected by weightlessness?
11. Have there been any new discoveries by researchers in space
concerning the Texas state molecule, The Bucky Ball, C-60?
12. Are you allowed to carry person items and if so, is there a rule
on how much you can take?
13. Do you ever get to review the final results of the experiments
you help to conduct on the ISS?
14. What does it feel like when the shuttle takes off?
Does it hurt?
15. If you were to push a hot wheels car on a circular loop in space
in the space station, would it go forever and maintain
the same speed?

Please note, the amateur equipment on the ISS will be turned off
prior to the beginning of the contact. It will be returned
to service as quickly as possible.

ARISS is an international educational outreach program partnering
the participating space agencies, NASA, Russian Space
Agency, ESA, CNES, JAXA, and CSA, with the AMSAT and IARU
organisations from participating countries. ARISS offers an
opportunity for students to experience the excitement of Amateur
Radio by talking directly with crewmembers on-board the
International Space Station.
Teachers, parents and communities see, first hand, how Amateur Radio
and crewmembers on ISS can energize youngsters'
interest in science, technology, and learning.
Further information on the ARISS programme is available on the
website http://www.rac.ca/ariss (graciously hosted by the
Radio Amateurs of Canada). Information about the next scheduled ARISS
contact can be found at
http://www.rac.ca/ariss/upcoming.htm#NextContact.

IRLP Notes
Participation in this contact is limited to 20 connections
and requires pre-registration.

Please contact Wayne, VE1WPH, via e-mail at ve1wph@rac.ca
for pre-registration and connection instructions.

EchoLink Notes
The contact between the ISS and school lasts for about 15
minutes +/-. During this contact, we appreciate everyone's
patience and understanding. We must mute everyone except
Dieter, KX4Y to avoid inadvertent, interfering
transmissions into the conference room. Thanks for your
understanding and co-operation.

Thank you & 73,
Scott H. Stevens / N3ASA
ARISS Team Member

Show me what regulations and/or rules that state an information bulletin can't be opinionated. Many Amateurs on this newsgroup believe that information bulletins can't be opinionated. There is no rules that states that an information bulletin can't be opinionated, because if it did it would be a violation of Section 326. My opinions on my bulletin address many amateur radio issues, and only amateur radio issues. Regardless of what many people on this newsgroup think I have the law on my side. but feel free to prove me wrong.

Dee, I'll go a little farther, No where in the rules does it state that an information bulletin can be opinionated. The only thing the rules state is that an information bulletin must be "amateur radio related". Thus, anything outside that scope would be consider broadcasting. For example, if someone one was to run an information bulletin about what he thinks is a good antenna for DX and how to set up; it would fall under the scope. But if Someone was to run an information bulletin about what they think about the presidents economic plan, then it would fall outside the scope of an inforamtion bulletin and fall into the range of broadcasting. I not a gambler but I would bet the federal courts would see it that way too.

2333. (BPL) Virtual Spectrum- Global Test

Newsgroup: rec.radio.amateur.policy
Date: 2005-03-06 16:34:23 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <jiGWd.56698$uc.24720@trnddc03>
Source record: 103799

I finally got the Provisional Patent filed for
my BPL work-around, Virtual Spectrum (tm).
Server is up and running and everything is ready.
Next step- some friends will
help with tests- one in Europe, one in
Australia and two in the U.S.
There will be a low bandwidth and
a high-bandwidth trail. First will
stream a few KCs of 40 meters and include
several CW messages at various frequencies,
including a couple close together so we
can figure the best levels without cross-talk.
Next will be a high-bandwidth trial with
CW, SSB, FM and some other mode yet
to be decided, streaming about 40 KC of
the band. Then, a live, continuous
stream of the bottom 40 KC of 20 meters
from my location, which will run for a few days.
I hope they don't put BPL here in the mean time.

After these tests are concluded,
the next step will be configuring for
2-way QSOs, which is just a matter of
setting up the software and T/R switching.
I ain't had this much fun with a radio project
since I was a novice. :-).

Everyone would agree that information on what is a good antenna for DX or or government rulings on antennas would be within the scope of Part 97. And everyone would agree that a piece on the president's economic plan is outside the scope. No one has ever said otherwise.

However an editorial on what you think hams should be doing quite possibly may not classify as information. There's little in an editorial piece that is of use to hams. Although editorials are derived from facts, they themselves are not intended to convey information.

The other item that makes things look bad is that from your posts, it appears as if you are using the ham bands because you were turned down for a broadcast license. Even if you restrict your content to Part 97 to keep it legal, it looks as if your interest is broadcasting rather than ham radio. So why bother? It's too limiting for your objective of being a broadcaster.

That kind of question.

> I don't think issuing licences to children
> makes much difference from that angle. When someone is on the air they are
> in a public place.

I don't believe you are keeping up, Alun. I don't see a single problem
necessitating the need for a minimum age for amateur radio licensing.
Len does. His comments to the FCC are there to see.

His latest comment about pedophiles is certainly "over the top".

I'd be careful before writing "Lennie is right" unless you know
everything Len has stated--also because he deplores being called
"Lennie", never mind all the things he has called others.

Tsk. I "placed you in that group?" NO.

Coslo was NOT mentioned by name.

Coslo, seeming to be super-sensitive, placed HIMSELF in that
"category." :-)

>Solely on my support for the Element 1 test.

Tsk. More over-sensitivity. Uber-sensitivity maybe...

>The picture he paints of me is nowhere near the truth.

More tsk. Had I painted your picture, it would be accurate.
Illustrators paint pictures (or draw them) as they are.

>But broad brushes paint broad swaths, and apparently if a person is in

>favor of a Morse code test, it is then mandatory that they are a
>Morsodist, an "Olde Tyme Hamme" and in favor of the "Archaic
>Radiotelegraphy Society, right?

Tsk. Lack of knowledge on the tools of the illustrator.
"Broad brushes" (used by illustrators) can, indeed, paint
little lines or points. That's called "technique with the
medium."

Coslo, what you have done is merely to fall face-down
on a palette-plate of wet paint and gotten yourself dirty.
If you can't watch where you are stepping, don't blame
others for your falling. Wipe yourself off and try again.

>No other possibility exists?

Not in THIS newsgroup! :-) PCTA fantasy is:

"Real" hams know code! CB is evil, wicked, mean, and
nasty, full of "illegals" and "law violators," every one of
them! NO ONE may say anything against the ARRL for
any reason for feer of invoking lightning from the gods!
The only ones "qualified" to operate radio transmitters
below 30 MHz are those who passed a federal test for
morse code cognition! This newsgroup is a Chat Room
for the PCTA, where they can hang and make a group
blog on the whichness of the what (the what not
necessarily related to radio).

Above all, NO ONE may say anything in here (or to
the government) about amateur radio without a valid
amateur radio license! [the "new" Bill of Rights] That
SO upsets all those olde-tyme hammes who "rule"
the world of ham just from tenure in that lifestyle. :-)

Temper fry...

>"Jimmy Who and cronies"

You know who... :-)

>This sampling from the past couple of weeks of r.r.a.p. were all
written
>by Leonard Anderson, the guy who "goes for the Personal Attack and
then
>loses his objectivity in his own insults while manufacturing 'issues'
>that aren't there".

Poor big badass Dave, another uber-sensitive PCTA extra who
pretends to "rule" in amateur radio. All fully of hissies today.

Can't take return fire like a seasoned combat veteran of
Vietnam in-country? Tsk, tsk, tsk.

>It matters not when it was written nor does it matter that you didn't
>follow it up. It matters that you wrote it.

Oh, my! "Once written, twice wry!" :-)

There are legal procedures for big badass Dave to take in
forcing the FCC to disregard what I wrote. I would suggest
a good attorney for consultation into filing charges of felony
mindslaughter and violation of the "new" Bill of Rights in
regards to amateur radio! Hurry! The statute of limitations
may run out soon! [statute in this case has clay feet,
doesn't run fast]

>You've never disavowed it or asked that the FCC disregard it.

Why should I? :-)

>The charge was made because it is absolutely true.

We ARE in agreement! ARRL news featured the story
of two adorable young children becoming, possibly, the
"youngest hams" at age 6. :-)

>You tap danced then as you are tap dancing now.

Never professionally! :-) Not even in an amateur production!

I used to date a professional dancer a long time ago
(a "gypsy" in the TV biz). We never danced vertically.

I did get to put on some Haney Plates though, learned
a few time-steps. :-)

Nice of you to remind me of days long ago...

>Now you wouldn't want to be presented with any facts that would give
lie
>to the statement above, would you?

Irrelevant. PCTA extras in here don't recognize reality or
the real differences between right and wrong...anything
said against any PCTA extra is autormatically a "lie."

Sometimes it looks like PCTA extras bathe in Lie Soap.

>I don't know of a single soul here who has ever made that claim or
>anything near it.

No need for you to do that. You RULE amateur radio.
Those who RULE need not have any precedent for
their statements. [they are "precedent for life?"]

>Don't worry about it too much, Leonard. You don't have an amateur
radio

>license to deserve.

Tsk. I have a commercial radio license, had one for a
long time. I've had a long career IN radio-electronics
beginning in radio in early 1953...which is ten years
longer than big badass Dave and his first teen-age
amateure Novice thingy. :-)

>I'll grant you that anytime you show up, it is deep.

...and cold, too! :-)

>Let me ask you a couple of plain question to see if I can get some
>straight answer from you, Len.

What, and take all the joy out of your compulsive-obsessive
behavior in here to attempt word-triumph over selected
writers? :-)

>When is the last time that you ever admitted to any wrongdoing
>in here?

According to newsgroup RULEZ (written by PCTA extras)
it was the very last posting I made...ANY posting. :-)

ALL postings, in fact. According to those RULEZ,
NO "unlicensed" (in the amateur radio service) poster has
"any business saying anything about amateur radio!" :-)

[of course, amateur radio is, by definition, NOT about
any business, is it? :-)]

Further, the RULEZ say that ALL PCTA extras can make
any charges, ask questions which NCTAs MUST answer!
The "penalty" for not answering - as the PCTA extras
expect - is severe: Many many posts and quotes from
Google DEMANDING answers sufficient to satisfy
those PCTA extra gods of radio. Woe to all when the
PCTA extras' wounds still fester and grow gangrenous!

>I don't need the ARRL's input to tangle with the likes of you.

Tsk. ARRL is not involved in my "likes." :-)

>Do you believe in your self-righteous attitudes, Len?

Ennumerate those "attitudes," big badass Dave.
Show your work. [which is going to be lines and
lines and lines and lines of Google quotes...:-)]

I have this funny belief in FREEDOM, a wonderful
thing about freedom of expression and the freedom
of being able to communicate with my government
to make changes. [that must not be in big badass
Dave's world...]

That FREEDOM used to be guaranteed to all U.S.
citizens. However, NOT in U.S. amateur radio
where ONLY the PCTA extras want to RULE. Tsk.

>Are you demented?

No. :-) I'm just a work professional in radio-
electronics who has had a hobby of all electronics
longer than I've been a professional. I'm terribly
fascinated by the outrage and hatred presented
by some self-righteous knowitalls who pretend to
RULE an activity - especially a hobby - just
because they think they RULE. :-)

>How much of a fanatic would one have to be to spend
>years in jousting with participants in an avocation in which you have
no
>part?

Tsk. Look in the mirror, big badass Dave. If you
actually have a reflection, ask your image why
he persists in the compulsive-obsessive action
against only certain individuals, trying to attack
their person constantly. :-)

From: "Dee Flint" <deeflin...@comcast.net> on Sat, 5 Mar 2005 10:24:14 am

>Fortunately I only see Len's idiotic comments when someone replies to them.

Tsk. PCTA Double Standard invoked. :-)

Speaking against morse code is "idiotic!" :-)

Ostrich syndrome. Hiding one's head in the sand does NOT make them disappear. :-)

>Notice how he has inserted material that wasn't even there. I've worked
>plenty of non-DX stations on HF. He ignores the fact that the same
>propagation principles apply to domestic and international communications.

"Ignore?" :-) Hardly.

The SAME laws of physics apply to ALL radio, Dee.

Electrons, fields and waves ignore human divisions of "domestic" and "international." They also ignore the human divisions of "ham radios" versus all other radios.

I first started doing both domestic and international radio communications 52 years ago. Laws of physics haven't changed in all that half century.

>I am also amazed at how he keeps flattering me by using the term "Mama Dee",
>since this is the most important job in the world for any woman with
>children. He probably intends for it to be derogatory but has failed
>miserably in that regard.

Tsk. I suppose you want to "discipline" those who make derogatory to you? :-)

Tsk, tsk, tsk. Trying to treat grown-ups as if they are children is NOT a mature behavior. :-)

>Notice how he cannot distiguish between 2nd best and 2nd most used. These
>two phrases have entirely different meanings.

Depends on whether one is in REALITY or the fantasy of the PCTA extras. :-)

The rest of the radio world thinks of morse code as a
"Once Was," and such isn't in any "2nd," nor "3rd," nor
any category. :-)

Tsk, tsk, tsk. ONLY in amateur radio is that old 1844
morse code considered an ultimate skill achievement
worthy of amateur radio license "qualification!" Wow!

Hello? Can anyone say "RETRO?" :-)

>Again he is totally fuzzy on the difference between 2nd best and 2nd
most
>used.

Tsk. I've offended Mother Ham! [isn't that awful?!?]

Well, one out of two ain't bad (I really like apple pie). :-)

[try the phrase "mom and apple pie" for those who are
connect-the-dot impaired... :-)]

Yup...the following is a catechism of the Church of St. Hiram
following:

>> Or, to keep the "CW" bandplan open as an
>> olde-tymer's playground/sandbox to keep their righteousnesses
>> happy. "Real" radio operators do "CW." All important, vital,
>> necessities, righteous. Get and keep federal LAW to TEST all
>> hobbyists operating below 30 MHz or the sky will fall!

To the PCTA extras, morse code IS first! Hear ye! Hear ye!

:-)

You made the statement to the FCC. The Commission has taken no steps to
implement your idea. It likely never will. Common sense prevails.

> >You've never disavowed it or asked that the FCC disregard it.
>
> Why should I? :-)

Would you like to be reminded of what you wrote in the wake of the heat
you took over the issue?

> >The charge was made because it is absolutely true.
>
> We ARE in agreement! ARRL news featured the story
> of two adorable young children becoming, possibly, the
> "youngest hams" at age 6. :-)

Yes, you advocated to the FCC, a minimum age for entry into amateur
radio.
We are in agreement.

> >You tap danced then as you are tap dancing now.
>
> Never professionally! :-) Not even in an amateur production!

Just here.

> I used to date a professional dancer a long time ago
> (a "gypsy" in the TV biz). We never danced vertically.

...and likely never danced horizontally.

> I did get to put on some Haney Plates though, learned
> a few time-steps. :-)

You were supposed to put them on your shoes.

> Nice of you to remind me of days long ago...

I don't know why you'd need help. You remind yourself of your days long
ago often.

> >Now you wouldn't want to be presented with any facts that would give
> lie
> >to the statement above, would you?
>
> Irrelevant.

Quite relevant, directly related.

> PCTA extras in here don't recognize reality or
> the real differences between right and wrong...anything
> said against any PCTA extra is autormatically a "lie."

Well, a lie is certainly a lie. You've lied.

> Sometimes it looks like PCTA extras bathe in Lie Soap.

Izzat the kind which makes it possible for us to recognize your lies?

> >I don't know of a single soul here who has ever made that claim or
> >anything near it.
>
> No need for you to do that.

No need to do what? Know of a single soul who has made the claim?

> You RULE amateur radio.
> Those who RULE need not have any precedent for
> their statements. [they are "precedent for life?"]

That's funny. I don't recall ever making a comment to the effect that I rule amateur radio. Can you come up with it from an archive?

> >Don't worry about it too much, Leonard. You don't have an amateur
> radio
> >license to deserve.
>
> Tsk. I have a commercial radio license, had one for a
> long time.

This isn't a commercial radio newsgroup. I wrote nothing about commercial radio licenses. What's the retort you are so fond of? Irrelevant.

> I've had a long career IN radio-electronics
> beginning in radio in early 1953

How nice for you.

> ...which is ten years
> longer than big badass Dave and his first teen-age
> amateure Novice thingy. :-)

Only fitting, since you're more than fifteen years older than me. If we can believe the actuarial tables, it'll even out. How is that supposed to be relevant? My comment was that you have no amateur radio license to deserve. That comment was and is correct.

> >I'll grant you that anytime you show up, it is deep.
>
> ...and cold, too! :-)

Childish....and old.

> >Let me ask you a couple of plain question to see if I can get some
> >straight answer from you, Len.
>
> What, and take all the joy out of your compulsive-obsessive
> behavior in here to attempt word-triumph over selected

Reminded of your own actions here? :-) :-)

> >When is the last time that you ever admitted to any wrongdoing
> >in here?
>
> According to newsgroup RULEZ (written by PCTA extras)
> it was the very last posting I made...ANY posting. :-)

Nope that wasn't a straight answer. When is the last time you ever admitted to any wrongdoing in here?

> ALL postings, in fact. According to those RULEZ,
> NO "unlicensed" (in the amateur radio service) poster has
> "any business saying anything about amateur radio!" :-)

No straight answer here. When was the last time you admitted to any
wrongdoing here?

> [of course, amateur radio is, by definition, NOT about
> any business, is it? :-)]

I don't see a straight answer here. When was the last time you admitted
to any wrongdoing here.

> Further, the RULEZ say that ALL PCTA extras can make
> any charges, ask questions which NCTAs MUST answer!
> The "penalty" for not answering - as the PCTA extras
> expect - is severe: Many many posts and quotes from
> Google DEMANDING answers sufficient to satisfy

> PCTA extras' wounds still fester and grow gangrenous!

Not a sign of a straight answer. When was the last time you admitted to
any wrongdoing here?

> >I don't need the ARRL's input to tangle with the likes of you.
>
> Tsk. ARRL is not involved in my "likes." :-)

It certainly isn't.

> >Do you believe in your self-righteous attitudes, Len?
>
> Ennumerate those "attitudes," big badass Dave.

Don't you know what your own self-righteous attitudes, little wizened
Len? You've just made an accusation about the "self-righteous
attitudes" of others. You didn't "ennumerate" them. Did you mean
"enumerate"?

> Show your work. [which is going to be lines and
> lines and lines and lines of Google quotes...:-)]

Are you trying to assign homework?

> I have this funny belief in FREEDOM, a wonderful
> thing about freedom of expression and the freedom
> of being able to communicate with my government
> to make changes. [that must not be in big badass
> Dave's world...]

You seem to believe in FREEDOM for yourself, but not for others with
ideas
at odds with yours. As evidenced by your voluminous word output here,
FREEDOM is a one-way street in your view.

> That FREEDOM used to be guaranteed to all U.S.
> citizens. However, NOT in U.S. amateur radio
> where ONLY the PCTA extras want to RULE. Tsk.

You've commented. Nobody applauded. Some laughed. Some ridiculed.
Some argued.

You have no guarantee that those things won't happen. Your freedoms
don't trump anyone else's freedoms. That's just the way it works.

> >Are you demented?
>
> No. :-) I'm just a work professional in radio-
> electronics who has had a hobby of all electronics
> longer than I've been a professional.

You could have done all that and still be demented.

> I'm terribly
> fascinated by the outrage and hatred presented
> by some self-righteous knowitalls who pretend to
> RULE an activity - especially a hobby - just
> because they think they RULE. :-)

Here's a surprise for you, Len: It is a cinch that you don't make the
rules for amateur radio. You're irrelevant to amateur radio, you
self-righteous know it all. :-)

> >How much of a fanatic would one have to be to spend
> >years in jousting with participants in an avocation in which you have
> no
> >part?
>
> Tsk. Look in the mirror, big badass Dave.

Okay, I've looked in the mirror. I'm not jousting with participants in
an avocation in which I have no part. I'm still an active, licensed
radio amateur.

> If you
> actually have a reflection, ask your image why
> he persists in the compulsive-obsessive action
> against only certain individuals, trying to attack
> their person constantly. :-)

On reflection, I believe I'll answer that question as soon as you do.
Perhaps you'll throw in the answers to the other two questions I asked,
the ones for which you provided no straight answer.
>
> LenAnderson@ieee.org

Tsk. Stevie done took a bath in Lie Soap again. :-)

> Lennie couldn't do it otherwise. He keeps making significant
>error-of-fact even when he has plenty of opportunity to "get it right"

>before he posts in here...pity that!

Of course, "pity" that so few want to inhabit a world of
fantasy conjured up by the PCTA extras where Morse
Is King! :-)

> Ironic that Lennie claims that he's such a brilliant engineer.

Tsk, tsk. Stevie done IMAGINED something again. Bad,
Stevie, Bad!

I am an electronics design engineer by training and
experience, accepting money for such work. Did that
for years and years. I've not claimed otherwise. :-)

"Brilliant?!?" Only when I turn on the Xenon spotlight.
:-) [I don't glow in the dark yet... :-)]

> Lot's of NON engineer types have some very enviable "DX" records
>never operating below 144MHz, let alone on 50MHz. Quite a few DXCC's
>awarded for VHF operations.
>
> THAT takes skill...perseverence...knowled?ge...determination.
>
> In other words...characteristics Lennie lacks.

Tsk, tsk. How did the subject suddenly turn to VHF DX? :-)

Is big badass Stevie some kind of VHF operations DX hero?
Tell us all about your mighty (hostile?) actions at VHF and
above! I'm sure we can find at least one person in here who
has the patience to listen to such tales.

Tsk. As for "skills" and the rest, I was working with 1.8 GHz
multi-channel microwave radio terminals back in 1954, as
operations and maintenance supervisor of 9 of them in 1955.
All line-of-sight, of course, but operating 24/7 and had to.

> You'll fogive Lennie's mock-derogatory attack on your gender,
Dee.
> Lennie's own female significant other wouldn't favor him with
>offspring, hence most of his angst vis-a-vis women, and I assume his
>misdirected attack on pre-teen licensure in Amateur Radio (no
practical
>experience in child development).

Tsk, tsk, tsk. My wife and I will celebrate our 6th wedding
anniversary soon. :-)

Tsk. Stevie hasn't done a good work-up on his opponents in
here. Stevie needs to go back to Psychiatry 101 and review
what he didn't get the first time around. :-)

I'm not sure what this thing about "raising children" is
about...it's an artificiality brought up by those who just
want to FIGHT about a subject.

> He even digs in pretty deep on Kim who's own position on many
>issues actually parallels his own. Ya gots ta wonder why he would
>publically slap around a potential ally.

I "dig deep?" :-) "Slap around a potential ally?!?" :-)

Stevie must be on some kind of druggie Trip again. :-)

> Lennie has a LOT of trouble distinguishing between a LOT of
>things, Dee...
>
> Like "truth" and "mistruth". They are interchangeable in
Lennie's
>world.

Tsk, tsk, tsk. I live in REALITY, not in Stevie's fantasy world
where He sets the rulez and determines what is "truth" and
what is "lie." :-)

> And if he were a licensed Amateur, Lennie would know how much
>significantly more challenging it is to obtain a DXCC above 50MHz than

>below it.

Tsk, tsk, tsk. Poor Stevie is trying to divert the subject.

I've worked above 50 MHz and I've worked below 50 MHz
since 1953 and continued to do so until 2004. Never had
to get an amateur radio license for that nor know morse
code, just used my First 'Phone first granted in 1956. :-)

> Makes those who do it a lot more remarkable in my book...

Stevie needs to get TWO books. And OPEN them. :-)

> Mediocrity kept Lennie away from at least one "aerospace" job I
>know of.

Which one was that? :-)

Was it Hughes Aircraft Company? Ramo-Wooldridge Corporation?
Micro-Radionics division of Systron-Donner? Birtcher Instruments?
Electro-Optical Systems (a division of Xerox Corporation)? Radio
Corporation of America? Teledyne Electronics? Rocketdyne (then
a division of Rockwell International, sold to Boeing Aircraft, with
a
current, pending sale to another corporation not yet completed)?

I've posted those places of employment in here before. You
really ought to get things straight. Tsk.

>> No doubt it kept him from others too.

Heh heh heh...I'm suuuure you think so...except I chose my
places of employment, was NEVER fired for any reason.

>> But he DID "have his hands in" several "aerospace" jobs...No
doubt
>>some of the early Vanguard missions and at least one Space Shuttle
>>mission.

I did?!? Stevie went off into some wild blue yonder of his own.

Tsk. "Aerospace" means both air and space. :-)

Rocketdyne designed and built - and still builds - the Space
Shuttle Main Engine (SSME). Three on every STS vehicle.
[that's "shuttle" to civilians] Liquid hydrogent - liquid oxygen
powered, throttleable thrust, 350,000 pounds of thrust
(awesome to feel one 1200 feet away in the blockhouse
during a test run). Each SSME has its own strap-on
computer to control the throttleable engine and measure
oxygen flow indirectly.

Tsk. I've never been directly involved in a "mission" of STS
(specific flight) and certainly not on the "Vanguard" program.

> (Lennie and Brain call me "nuts", but then they keep making
>assinine assertions in the face of well known, publically accepted
>standards to the contrary of thier "understanding" of
>things...Sheeeeesh...)

Well, little Stevie is 0 for naught on this message, hasn't gotten
one thing correct yet, wandered obliquely off on some tangent
subject in a transcendental haze. Poor guy should STAY on
his meds...and seek professional medical mental therapy.

But, Stevie IS a shining example of a modern PCTA amateur
extra! [oy veh! :-)]

LenAnderson@ieee.org

Hell, she didn't write that, Len. She said your idiotic comments. :-)

> Ostrich syndrome. Hiding one's head in the sand does NOT
> make them disappear. :-)

It makes you disappear for her, Len. She's built a fence behind her
house so as not to have to view the unsightly landfill next door.
You're the unsightly landfill.

Would you like to be disciplined by Dee, Leonard? Perhaps you can get
her to don some of those invisible robes you like to write about. Maybe
you'd prefer your other favorite, the Waffen SS outfit.

> Tsk, tsk, tsk. Trying to treat grown-ups as if they are

As soon as the "rest of the radio world" gets to dictate what happens in amateur radio, I'll begin to worry.

> Tsk, tsk, tsk. ONLY in amateur radio is that old 1844

> Tsk. I've offended Mother Ham! [isn't that awful?!?]

You offend quite a number of folks, Len. Yes, it's awful.

Why would hams want to operate on 11 meters and talk to cbers?

I don't think typing speed has anything to do with it coming out screwed up...low intellegence maybe?

Now run back down to the mall and hide behind the artificial bushes and you may can pick up some more kewel words from the jr. highschoolers to try and impress us with.

Let us know when you pass through puberty and grow up a bit.

> > 30 MHz? Yes.
>
> There are no hams "trapped above 30Mhz.

Agreed.

Consider how many Novices and Techs who have passed Element 1 have not
upgraded, even after almost 5 years. Are they "trapped"
because of the General written test?

> > Will there be a large increase in HF use? Yes.

> That is also a maybe. If the code is dropped this year,
> many will buy the
> rigs and try it but may be sadly disappointed in the results
> since we are in
> the trough of the sunspot cycle and results are so often poor
> right now.

Depends on what people expect.

If someone expects to put up a ground-mounted "all band" vertical,
connect a 100 W transceiver and make SSB DXCC in

a few weeks without much effort, they'll probably be
sadly disappointed.

OTOH, 80 meter CW has been great the past couple of weeks. Good QSOs of
a couple hundred miles with modest stations at both ends.

All depends what you expect.

> They may not stick with it until conditions improve since
> they won't have
> the skills to participate in the second most used mode
> of shortwave communications.

Second most used by hams, anyway.

But I wonder if it would even get that far. The license
is only the first step - getting a station together and
working is a much bigger task than passing Element 1.

From: Dave Heil <RulerUfDasHam@oldetymes.comt>, another poor baby outraged and can't take it anymore shouted into his keyboard on Sun, Mar 6 2005 1:17 pm:

>LenAnder...@ieee.org, picturing another wearing invisible robes, wrote:
>
>> Dave Heil, wearing his invisible royal robes as Archbishop of
>> the Church of St. Hiram, turned livid with apoplexy and blurted
>> out the following personal anguish on
>
>Does it please you to think of me wearing something invisible, Len?

Tsk. From the old folk fable of "The Emperor's New Clothes."

The emperor (that's you) got talked into some expensive NEW clothes (which didn't exist) and in vanity insisted on wearing them in public to show off his finery. Self-delusion. So YOU.

>> Tsk. NO ONE can tell big badass Dave what to do! :-)
>
>Can anyone tell you what to do, little wizened Leonard?

Big badass Dave thinks he can. :-)

"Little?!?" "Wizened?!?"

Tsk. Another PCTA Double Standard displayed for all to see.

>I don't belong to the Waffen SS, Leonid. First it is invisible robes
>and now, make believe uniforms.

The Waffen SS never existed? The Holocaust never existed?

Tsk, big badass dave wants to act just like an SS man, complete with "show your papers!" orders and other typical bullying tactics.

>Hissies? No, I simply pointed out that you continue to do that which
>you accuse others of doing. You do it frequently.

Tsk, tsk. You do it to others and bitch and whine when someone does it right back on you! Poor baby.

>Does it somehow bother you that I'm a Vietnam combat veteran?

"Combat?!?" Ho ho! :-)

>You made the statement to the FCC. The Commission has taken no steps
to
>implement your idea. It likely never will. Common sense prevails.

Tsk. FCC took no steps to implement what the ARRL wanted.
"Common sense prevails!"

>Would you like to be reminded of what you wrote in the wake of the
heat
>you took over the issue?

If you want to piss off others with many and varied Google quotes,
go right ahead. [you'd be wasting your time...and others' time]

Tsk. I took no "heat" on that single small part of my Comment
for nearly a year after the FCC filed it. Then it was brought up
in an effort to attack me personally...which is the standard mode
of PCTA extras' so-called "debate."

>> PCTA extras in here don't recognize reality or
>> the real differences between right and wrong...anything
>> said against any PCTA extra is autormatically a "lie."
>
>Well, a lie is certainly a lie. You've lied.

Nope. PCTA extras do the "1984" thing with "Truthspeak,"
turning around Right and Wrong to suit their own
brainwashing.

>> You RULE amateur radio.
>> Those who RULE need not have any precedent for
>> their statements. [they are "precedent for life?"]
>
>That's funny. I don't recall ever making a comment to the effect that
I
>rule amateur radio. Can you come up with it from an archive?

You RULE by forbidding open discussion on amateur regulation
issues with the usual bullying tactics against NCTAs. Plain.
No "archives" need be quoted.

You RULE based on the delusion of "seniority/tenure" in
amateur radio, as if those four decades of keeping your
ham license had some regulatory impact. Doesn't work
that way, senor, amateur radio is a hobby, not a job, not
a guild, not an association. Never was except in the
minds of a few.

The FCC doesn't require any Commissioners or staff to
hold amateur radio licenses in order for them to REGULATE
ALL of amateur radio law.

You are NOT an FCC Commissioner. You are NOT an FCC
staffer. You ARE a big loudmouth.

>This isn't a commercial radio newsgroup.

True...it's a BLOG for PCTA extras to vent their upset... :-)

>> I've had a long career IN radio-electronics
>> beginning in radio in early 1953
>
>How nice for you.

Yes. it was and continues to be nice! :-)

Still profitable. Interesting, fascinating as well!

>Nope that wasn't a straight answer. When is the last time you ever
>admitted to any wrongdoing in here?

According to newsgroup RULEZ (written by PCTA extras)
it was the very last posting I made...ANY posting. :-)

ALL postings, in fact. According to those RULEZ,
NO "unlicensed" (in the amateur radio service) poster has
"any business saying anything about amateur radio!" :-)

>No straight answer here. When was the last time you admitted to any
>wrongdoing here?

"any business saying anything about amateur radio!" :-)

>> >Do you believe in your self-righteous attitudes, Len?
>

>> Ennumerate those "attitudes," big badass Dave.
>
>Don't you know what your own self-righteous attitudes, little wizened
>Len? You've just made an accusation about the "self-righteous
>attitudes" of others. You didn't "ennumerate" them.

Tsk. I don't have to list them. They are in plain sight. :-)

PCTA extras have the "truth" (as they believe it).

>> I have this funny belief in FREEDOM, a wonderful
>> thing about freedom of expression and the freedom
>> of being able to communicate with my government
>> to make changes. [that must not be in big badass
>> Dave's world...]
>
>You seem to believe in FREEDOM for yourself, but not for others with
ideas
>at odds with yours.

Tsk, tsk. I believe in freedom for all.

You must think that is "wrong" in amateur radio...you RULE
it the old-fashioned way, you bully it with others. :-)

>You've commented. Nobody applauded. Some laughed. Some ridiculed.
>Some argued.
>
>You have no guarantee that those things won't happen. Your freedoms
>don't trump anyone else's freedoms. That's just the way it works.

Is it?

Morse code testing remains for amateur radio licenses, long
after it served its usefulness to the government agency
regulating amateur radio. It has been lobbied for by the ARRL
(a minority group) through the insistence of the olde-tyme
board of directors' voting and the tradition of maintaining the
Archaic Radiotelegraphy Society, a living museum of old
radio skills.

That's a dictatorship by a minority group, very UN-democratic.

But, big badass dave managed to pass the "CW" test and
so have other PCTA extras. They LIKE being dictators and
pushing others around. That makes them "somebody" and
that seems to be very important to them.

NOT "freedom." Except to the PCTA extras who have theirs
and screw all the others, the newcomers.

Nice attitude of theirs? No

Nice democratic thing? No.

Big badass dave, you have this nice shiny Orion, don't you? Why don't you go play with your Orion toy on the radio spectrum, work DX on HF with CW.

Quit trying to play Boss.

[the best you've done is to do a bad imitation of Boss Hogg...]

QRP is defined as 5 watts or less.

> >Then the HAMs can have QSOs with CBers.

We already can, QSL?

I have a CB in my vehicle. A stock TRC-451 with an Astatic 636-L and
a 2x455 box that talks as far as I can hear with a full size antenna.

I also have a 2 meter and sometimes 440 as well. I left the CB in
because it was already there and when you want to find out why
traffic stopped, there's nothing like 19, for a minute or two.

> With almost total lack of any enforcement there,

Hello, Lloyd

You're gonna love the fallout from "conservative" Bush & company who has invaded two countries in the Middle East and is threatening a third. Be prepared for $80.00 a barrel oil. Oh, go ahead - drop the bomb on them since they won't cooperate.

You will find that although the religious right here won the election for Bush (who is *not* about to deliver on any promises except to reduce taxes whilst a massive deficit is about to destroy our country), the religious right in the Middle East is going to cause a *lot* of problems. Oil will be number one on the hit list.

You want lower taxes? Ask all the construction workers and truckers in America to go on strike. If no roads are repaired, we'll save a *lot* of taxes! Heck, cut the airports too. We'll save even more taxes!!

It appears that the Republicans feel that everything should be supplied to big business for free, including transportation, the infrastructure, power (I pay over 12 cents per kilowatt hour, whilst many businesses pay *under* 2.8 cents), and more.

Even black church leaders are condemning our "liberal" judges, conveniently forgetting their own past.

As to references to God - are you referring to the Christian "God", the Muslim "God", or the Jewish "God"? I'd inquire about other religions, but suspect a lot of double-digit IQ types might get confused.

Off topic, but interesting aside. If there is intelligent life far advanced beyond ours, I suspect they would not make contact with us as we are far too violent and would not make good use of any advanced technology.

Gotta love this place :))

With all due regards from Rochester, NY

It is the latest in a very long string of very odd things which Leonard
has typed.

Mike, Mike, Mike. You have a callsign. You're guilty of trying to
impress Len.

We;ve had several actions over the years where a licensed ham was caught interfering with other stations by sending Morse over a DTMF pad....usually the letters "F" and "U"......including one where the interferer was trying to cover up a known jammer. We caught the first one first....

I think you are talking about the 6 meter band plan, versus the 2m band plan. There are seven unique splinter freqs. and 15 unique whole number freqs. for simplex. Well, when you figure there are still some CB packet stations operating on the inner freqs., then it should not be a problem. Oil
is the key though. Give it enough oil and away she goes for sure.

And your opinionated, pointless, ill-conceived broadcasts are of no interestest to the amateur service, therefore they are not information bulletins as there is no information of interest to the amateur service in them.

From: N9OGL <toddaug@consolidated.net>
Message-ID: <1110174848.995005.321700@g14g2000cwa.googlegroups.com>
Source record: 103881

FROM THE FCC WEBSITE:

http://wireless.fcc.gov/services/amateur/about/communications.html#s3

One-Way Transmissions

Q. What types of one-way communications are amateur stations authorized to transmit?

A. Section 97.111(b) provides for one-way communications. In summary, auxiliary, beacon, space and stations in distress are specifically authorized to make certain one-way transmissions. Additionally, an amateur station may transmit the following types of one-way communications:

Brief transmissions necessary to make adjustments to the station;

Brief transmissions necessary for establishing two-way communications with other stations;

Telecommand;

Transmissions necessary to providing emergency communications;

Transmissions necessary to assisting persons learning, or improving proficiency in, the international Morse code;

Transmissions necessary to disseminate an information bulletin; and

Telemetry.

Q. What is an "information bulletin"?

A. The term is defined in Section 97.3. It is a message directed only to amateur operators and consists solely of subject matter of direct interest to the amateur service. The control operator of the station transmitting an information bulletin is responsible for determining that the subject matter is of direct interest to the amateur service.

Q. Does an amateur station transmitting information bulletins have to share the channel?

A. Yes. Section 97.101 provides that each station licensee and each control operator must cooperate in selecting transmitting channels and in making the most effective use of the amateur service frequencies. A specific transmitting channel is not assigned for the exclusive use of any amateur station. Section 97.101 also provides that no amateur operator shall cause interference to any radio communication or signal. There is no exemption for amateur stations transmitting for information

bulletins.

Q. Is broadcasting prohibited?

A. Yes. Section 97.113 prohibits amateur stations from engaging in any form of broadcasting or in any activity related to program production or news gathering for broadcasting purposes.

Q. Is there an exception to this prohibition?

A. Yes, there is one exception: Communications directly related to the immediate safety of human life or the protection of property may be provided by amateur stations to broadcasters for dissemination to the public where no other means of communication is reasonably available before or at the time of the event.

Q. What is "broadcasting"?

A. Section 97.3 defines the term "broadcasting," in the context of the amateur service, as a transmission intended for reception by the general public, either direct or delayed.

2368. A Hot New TV Decrambler (All Digital)

New XP2500A
The World's #1 Digital Satellite Television
Receiver Descrambler is Now Available to you!!!!!

Order Yours at: http://www.fta9000.3322.org

No Monthly Subscription Charges of ANY Sort!
No Service Contracts of ANY Sort!
No Telephone Connections of ANY Sort!!!!
Does NOT use ANY Sort of Satellite Access Card
The World's Number One "Cardless" Satellite Receiver!!!!

A NEW Product for the NEW Year of 2005
Our New XP2500A Digital Satellite Television Receiver Descrambler allows you to view at your convenience the following with the USA, Canada, Cuba, Bahamas, Jamaica, Virgin Islands and Mexico:

View Over 600+ Digital Television Stations FREE! (Everything!)
View Over 200+ Digital Commercial Free Music Stations FREE !(all categories)
View Over 40 Pay-Per-View Movies Channels FREE!
View 8 HBO's/5 Cinemax's/10 Showtime's/8 Starz, etc. FREE!
View Seven Adult Channels FREE FREE FREE • 24 Hours A Day (Non-Stop Action)!
Boxing/Football/Soccer/Baseball/Basketball • ALL Sports Packages FREE (With No Black Outs)!
Receive Home-Town Local Broadcast Television Stations from 4 Time Zones
Use this New Television Descrambler at Home/Office/Truck/RV etc.
Works In the USA and Canada • plus ALL of North and South America and Territories!
Works on: Nagravision, Seca, Viaccess #1 and #2, Irdeto One and Betacrypt Digital Satellite Signals!!!!

NOTE TO AUSTRAILIANS: We get many request about the Australia•s "Foxtel Channel". Our New XP2500A Receiver works nearly ANY where in the world - but it will NOT receive "Australia•s FOXTEL Broadcast Channel" as of yet.....they use Irdeto #2 a Decoding System.....so wait patiently - our Descrambling Technicians are working HARD on this one, to brake the code.
International Customers.

How have you been prevented from discussing anything here. Come to
think of it, when have you discussed much of anything here?

> You RULE based on the delusion of "seniority/tenure" in
> amateur radio, as if those four decades of keeping your

> ham license had some regulatory impact.

It is no delusion that I have 41 years of experience in amateur radio to your 0 years of experience in amateur radio. The Commission said that it wanted to see a consensus among amateur radio ops on the morse testing issue. You aren't a part of amateur radio.

> Doesn't work
> that way, senor, amateur radio is a hobby, not a job, not
> a guild, not an association. Never was except in the
> minds of a few.

Yes, hobby or avocation, it is one in which you play no part.

> The FCC doesn't require any Commissioners or staff to
> hold amateur radio licenses in order for them to REGULATE
> ALL of amateur radio law.

It still hasn't sunk in. The FCC staffers are paid to regulate amateur radio. You aren't with the FCC. Licensed amateurs are participants in this avocation. You are not a participant in amateur radio.

You don't regulate. You don't participate. You have the right to comment to the FCC. They aren't permitted to publicy ridicule you. You've commented. You may also comment here. We aren't bound by the no ridicule rule. We may laugh, criticize, ridicule or argue. I've chosen to do some of each. That is my right.

> You are NOT an FCC Commissioner. You are NOT an FCC
> staffer.

No, I'm a participant. I have the license which says so.

> You ARE a big loudmouth.

I'm typing.

> >This isn't a commercial radio newsgroup.
>
> True...it's a BLOG for PCTA extras to vent their upset... :-)

No, wizened little gent, this is an amateur radio newsgroup. :-) :-)

C'mon Leonard. We're pulling for you. I think you can come up with an
answer. Give it a try, old boy.

> >> >Do you believe in your self-righteous attitudes, Len?

> Tsk. I don't have to list them. They are in plain sight. :-)

I'm sorry. If you want others to "ennumerate", you'll have to sweeten
the pot by doing so yourself.

> PCTA extras have the "truth" (as they believe it).

Don't you believe that things you write are true?

> >> I have this funny belief in FREEDOM, a wonderful

>
> Tsk, tsk. I believe in freedom for all.

That hasn't been evidenced by your manner here.

> You must think that is "wrong" in amateur radio...you RULE
> it the old-fashioned way, you bully it with others. :-)

You as big a bully as ever showed up here, Len. :-) :-)

> >You've commented. Nobody applauded. Some laughed. Some ridiculed.

> >You have no guarantee that those things won't happen. Your freedoms
> >don't trump anyone else's freedoms. That's just the way it works.
>
> Is it?

Yes, it is.

> Morse code testing remains for amateur radio licenses, long
> after it served its usefulness to the government agency
> regulating amateur radio.

Others disagree with you and say so. That's FREEDOM.

> It has been lobbied for by the ARRL
> (a minority group)

You're a much smaller minority, Len. You're about 138,000th the size of the ARRL.

> ... through the insistence of the olde-tyme
> board of directors' voting and the tradition of maintaining the
> Archaic Radiotelegraphy Society, a living museum of old
> radio skills.

C'mon, Len. Knock of your fantasy stuff lest the hooting and tomato throwing begins anew.

> That's a dictatorship by a minority group, very UN-democratic.

You'd substitute your dictatorship by your 138,000th sized minority? Now that would be very undemocratic.

> But, big badass dave managed to pass the "CW" test and
> so have other PCTA extras.

Can't little wizened Leonid pass the "CW test?

> They LIKE being dictators and
> pushing others around.

You seem to like pushing others around but you surely don't like it when things aren't going the way of your 138,000th sized minority.

> That makes them "somebody" and
> that seems to be very important to them.

Would you like to be somebody in amateur radio, Len? There's that pesky "getting in" part.

> NOT "freedom." Except to the PCTA extras who have theirs
> and screw all the others, the newcomers.

You've commented to your government. You've soapboxed here. That's about all the further your freedom extends. Freedom doesn't mean that it is going to be done your way, no matter how much you want something to come to pass.

> Nice attitude of theirs? No

> Nice democratic thing? No.

I don't think you know very much about democracy. Remember your "Coronation Day" comments. Well, freedom and democracy didn't go your way. Too bad.

> Big badass dave, you have this nice shiny Orion, don't you?

Are you always in the habit of asking a question to which you already know the answer?

> Why
> don't you go play with your Orion toy on the radio spectrum,
> work DX on HF with CW.

Here's one for you, little wizened Lennie, I'll do that if I choose.
You aren't keeping up with what's going on though. This weekend was the
big SSB DX contest weekend. I did some of that because I chose to. I
posted here too, because I chose to. You do what you can and I'll do
what I choose. Fair enough?

> Quit trying to play Boss.

Quit trying to play like you have something to do with amateur radio.

I don't think you have a handle on it. She thinks your posts are ugly
and that by killfiling you, she beautifies the newsgroup.

> By all means, everyone that CANNOT argue all sides of an
> issue do their ostrich thing! Delude yourselves! Practice

You haven't really argued an issue in here in years. You're all about
the things which you accuse others of doing.

> >Would you like to be disciplined by Dee, Leonard?
>
> I'm not into sado-masochism. Sounds like YOUR thing. :-)

Actually, from what you wrote and snipped, it sounded like very much
"your thing". :-) :-)

That's right. All are NOT required to subscribe to your views. They may jeer and toss rotten fruit your way.

> You want to drum the cadence but you
> would be better off to beat it.

We're drumming and playing that old amateur radio jazz. You aren't allowed in the band. :-)

But...but...but...LENNIE!

YOU are the one who is constantly reminding us of the ultimate
authority of the unlicensed commissioners, and that they are under no
obligation to lean the way of the masses when thier solicited opinions
go against what THEY perceive as necessary.

So..Now you've changed your mind...?!?!

Or just altering the rules as they fit your needs?

> [the best you've done is to do a bad imitation of Boss Hogg...]

Better his Boss Hogg than your Lennie the Scumbag.

On the other hand...that is one thing you ARE good at. I stand
corrected.

Message-ID: <1110187048.544160.111090@g14g2000cwa.googlegroups.com>
Source record: 103892

Whellllllp......

Lennie said no one "debates" the Morse Code exam "issue" anymore.

I created a thread solely for his benefit nine days ago. His SOLE
response has been:

QUOTE

Sorry, I can't post any...a big badass PCTA extra will only harrass
me with attempted inimidation. :-)

This is a CLOSED newsgroup. Only PCTA extras will be allowed
in here. I've been told that. All others have "no business"
in here.

UNQUOTE

The presence of the thread proves Lennie wrong and his one and
only post to the thread demonstrates that, once again, he is a proven
liar.

Thanks, Lennie.

Heck, I've had it all wrong, Dave. I thouhgt having a callsign
offended him!

Maybe he's right and I am a little dull...

Fascinating, Phil!

Was that on HF or VHF/UHF? The use of the DTMF pad makes it sound like
a repeater thing.

Several actions over the years works out to one every few years or so.
Still a lot less than in voice modes, but more than "you've got to go
back years and years".

--

On the guy transmitting "code practice" 24/7:

It is my understanding that there's no hard rule against doing what he
did, *if* the practice is done on a published schedule and *if* station
control and ID meet FCC regs.

IOW, it's theoretically possible for a ham station to legally transmit
code practice consisting of Bible texts 24/7.

My take on the violation was that

1) There were questions about the station control.

2) There was no response to FCC's repeated requests for information on
the station operation (primarily about 1)).

Both of which lead to the NAL.

It's kinda hard to be "offended" when you realize the person doing the "offending" is such an idiot. Kinda like the guy who walks up to a park bench, picks up the "Wet Paint" sign, sits down, then complains about the wet paint.

It's just that Lennie walks up to the bench, looks around to see if anyone's watching, picks up the sign and sits down, then screams at the top of his lungs how they came along and painted the bench while he was still on it.

Wadda putz.

Trying to impress him offends him. That would, in Len-speak, make you
"overly-proud".

Next thing you know, Len'll be picturing you in an invisible Waffen SS
uniform and his thoughts will drift to having you punish him. It gets
really strange *after* that.

I assume that most of this will fall under the "opinion" portion of your
show, Todd.

I have a few good topics for your future broadcasts/informational
bulletins: "Fast typing makes for incoherent sentences", "My high IQ
leaves me unable to communicate with lesser beings" or "How I beat the
FCC
at its own game".

Good luck. Drop us a line and tell us how it went.

I don't think Handi-Hams includes those who are potty-mouthed,
snivelling twits who trash airwaves and USENET alike.

What about the Putzmeister ISN'T "strange", Dave?

He's an ex-radio technician (wannabe engineer) who can't pass a
radio exam.

He embellished his military "career" with tales of derring-do of
guys who were KIA 3 years before he was even inducted. (And let us not
forget the "hair raising" tale of "incomming artillery" and how he
served "under the threat to the Soviet Bear" even though that "Bear"
was still being manufactured!)

He makes up stories about the alleged "dishonesty" of ARRL board
members then doesn't provide a lick of evidence.

He's quick to tell everyone else what they "are" or "aren't", yet
isn't any of those things either.

He cries "foul" over having been challenged in the eyes of the
FCC, yet has spammed ECFS with almost 2 dozen "he's not objective
because..." "rebuttals" of licensed Amateurs with decades of
experience.

He claims he can operate "anywhere" with his GROL, but can't stand
it when it's pointed out to him that his GROL SPECIFICALLY restrains
his "operating privileges".

He was never "published" in a professional journal and was part of
an Amateur Radio journal that went belly-up with him as part of the
"Editorial Staff".

He routinely makes glaring errors of fact and practice in Amateur
policy...

Could it be cuz he has no practical experience in Amateur
matters...?!?!

Me thinks so!

Naw, Steve. The Todd's in amateur radio either get bored when they discover that ham radio isn't the place to play boy broadcaster or they have their amateur tickets yanked by the FCC when they continue to step out of bounds. Todd will burn up on reentry.

After reading his output here for nearly a decade, I can honestly answer
that I don't see much. He recently wrote about "marching to a different
drummer". Well, he's the kind of guy who marches in a parade with 150
others and shouts at them that *they're all out of step* with him.

> He's an ex-radio technician (wannabe engineer) who can't pass a
> radio exam.

Be fair, Steve. Len might be able to pass an exam. He might not. He
might not be able to pass a morse exam at this point. Len has told us

of a decades-long interest in amateur radio. He has told us about getting an "Extra right out of the box". He has also told us that he has no interest in obtaining an amateur radio license. In short, it really doesn't matter what Len could or could not do. The chances of him even making an attempt are quite small.

> He embellished his military "career" with tales of derring-do of
> guys who were KIA 3 years before he was even inducted. (And let us not
> forget the "hair raising" tale of "incomming artillery" and how he
> served "under the threat to the Soviet Bear" even though that "Bear"
> was still being manufactured!)

Len is big on wrapping himself in patriotic bunting. You'll note that when I wrote "Vietnam combat veteran" very recently, Len's response was "COMBAT!?"

> He makes up stories about the alleged "dishonesty" of ARRL board
> members then doesn't provide a lick of evidence.

As you've no doubt seen, Len can't answer a question with a straight answer.

> He's quick to tell everyone else what they "are" or "aren't", yet
> isn't any of those things either.

No, he's not. One of the things he isn't happens to be a radio amateur. In that, he's an odd man out. At very least, he's an odd man.

> He cries "foul" over having been challenged in the eyes of the
> FCC, yet has spammed ECFS with almost 2 dozen "he's not objective
> because..." "rebuttals" of licensed Amateurs with decades of
> experience.

I'm telling you, Steve, he has to have been the subject of discussion at the Commission on one or more occasions.

> He claims he can operate "anywhere" with his GROL, but can't stand
> it when it's pointed out to him that his GROL SPECIFICALLY restrains
> his "operating privileges".

What's the diff? His commercial license has nothing to do with amateur radio.

> He was never "published" in a professional journal and was part of
> an Amateur Radio journal that went belly-up with him as part of the
> "Editorial Staff".

I don't think it likely that Len's presence had anything to do with "Ham Radio" ceasing publication. I went through some of my back issues and viewed some of Len's material. None of his articles were construction articles. None were interesting enough to me to have read them when first published. None interested me enough to read them through when I saw them recently. I saw them as stuff to be skipped between amplifier or antenna articles.

> He routinely makes glaring errors of fact and practice in Amateur
> policy...

He does get quite a number of things partially or completely wrong.
Then again, he has no background in amateur radio.

> Could it be cuz he has no practical experience in Amateur
> matters...?!?!

Oh, I think Len has plenty of experience in amateur matters, just not
amateur radio matters.

<<<For your information DICKHEAD I quit walmart to go back to school so
I
get into $50k to $100k job.So fuck you dickhead.
Todd N9OGL >>>

You lie about this and you bullshit about everything else. Your
informational bulletin shows are equally full of bullshit so they are
of no use whatsoever to anyone. Yeah, the entire time you spent
farting around at Wal Fart you were dreaming about a $50-$100K job like
everybody else that works in that shithole. When I have nothing better
to do, I go into the Wal Fart near me and I fart and watch the retards.
I buy terlit paper there and that's it, it ain't good fer nothing
else. You got fired fer being a shit. We all know that, so there is
no sense in lying about it. Why don't you get a "wireless mike" from
radio shack so you can broadcast all the bullshit you want and it will
stay within your own house so no one else has to listen to it. You can
even take it into the bathroom with you and broadcast those sounds.
Why don't you apply at a local radio station, anything to get your foot
in the door, sweep the floors, clean the cans, then hopefully after a
while they will give you some mike time and you can spin some tunes and
yak yak yak.

I am sure Lennie's sole exposure to "combat" has been ducking a
rolling pin by Mrs Lennie. Or dragging himself back to the barracks
via the benjo ditches after a night of revelry in post-war rear-area
Japan...Had to be a LOT of celebrating that they weren't the unlucky
schmucks in Korea.

Too true. Nor does his Army experience, his "aerospace" career,
or his labours at a plastic model company.

But we hear a LOT about those...

I bought a couple copies of "HR" for .20c a copy at a flea market
just to read his articles.

Flighty stuff. Impractical. And after five years of asking him
to do so, he's not provided a single instance of where his
"theoretical" dissertations were part or parcel to any "real" project.

Not a one.

Toddy never uses any facts to back up his statements. The only thing that is important to him is his OPINION. He is under the delusion that others are interested in his OPINION as a result of his being in retard school. There, the teachers and other retards acted as if they were interested in his OPINION. Your tax money goes to the special ed teachers to encourage retards to express themselves. They normally have an aversion to self expression to avoid looking ridiculous. The result of all this very special education is that you have blithering idiots running amok. He now requires that same ego stimulation. Even if he has no audience he still must hear himself yak, like a true psychopath.

Of?

On the otherhand I can professionally suggest that you seek some
help for your inability to deal with truthfulness and deceit, Brian
Burke.

And let your wife and Scouting council in on it...they can help.
You'll only be able to hide your conduct so long, then it will show up
on thier respective doorsteps and the secret will be out.

So...

What is it with Illinois?

Lennie "It's My Lie And I'll Tell It My Way" Anderson alleges to hail from there.

Mark "I Am A Reluctant Gay Pagan Draftee Colonel in The US Army Chemical Corps" Morgan, KB9RQZ is in Illiopolis.

(Todd is close enough to Mark to get him on 2M...If Mark is as much fun with the spoken word as he is illiterate, they could insult each other all day long and not understand a word either said!)

Michael "Why Oh Why Wasn't I Born White" Jackson missed being an Illinoisan by 4.5 miles.

Now we have N9OGL.

Must be acid rain.

Hi I have a question how do I add more stations to my Shoutcast
server? and how do I increase my listerners?

For God's sake, get the United States out of the U.N. before
it is too late. John Kerry & Bill Clinton are U.N. fans. Is that
proof enough?

That was actually a tech question, the shoutcast server which anyone
can download has in it core where you could set the number of people.
the standard setting when you download it is 50 people. you can however
reconfig it to have up to 500 people. of course you also have to take
into account you internet speed. Someone with a dial up of 56K couldn't
handle 500 people connecting to his computer, it would slow it down a
great deal. A person running 56K with 500 people connecting to his
shoutcast server on his computer would probably slow his system down to
14.4K. Me I have high speed DSL (around 700KB) so I was asking to
change it from the default of 50 listeners to a higher number.

Information Bulletins

There has been some bitching and whining on the newsgroup rec.radio.amateur.policy about my information bulletin. The complaining comes from Amateur Radio operators who feel that information bulletins aren't suppose to be "opinionated" yet, when I repeatly asked them what rule or ruling from the FCC states that information bulletins can't be opinionated, they never responded except to badmouth my grammar. So lets look at the history and regulations governing Information Bulletins.
To start lets look at the definitions as prescribed under Part 97. Under Part 97.3(a)(10) Broadcasting is defined as Transmissions intended for reception by the general public, either direct or relayed. While under Part 97.3(a)(26) Information bulletins are defined as A message directed only to amateur radio operators consisting solely of subject mater of direct interest to the amateur radio service. The only other rule governing information bulletins can be found in Part 97.111(b)(6) which deals with Authorized One Way Transmissions and it states "Transmissions necessary to disseminate information bulletins". No where in either 97.3(a)(26) nor in 97.111(b)(6) does it state a information bulletin can not be opinionated. I can't really figure out how it came to be that amateur's feel that other amateurs can run bulletins that are opinionated. They are not illegal, nor is there any rules prohibiting such transmission. Under 47 USC 326 the FCC is banned from controlling the content of any station, except for obscene and indecent material. So where and how did the amateur come up the notion that information bulletins can't be opinionated? Many amateur feel that opinions are not information, This however is not true, here in the United States this country was based on the belief of the free flow of idea's. Information is 50% fact and 50% opinion, and without the opinions of people the free flow idea's will be eliminated. The problem I see is that amateur's don't want other amateur's to be opinionated and/or afraid that some of those amateur's opinion might be the deep down the truth of problems within the service. The other thing is, many amateur's feel that opinionated program, even if is about amateur related is Broadcasting. This is not true either; As stated above broadcasting is programming directed to the general public. There's where the line is drawn, Broadcasting is programming which is directed to the general public, while information bulletins is programs directed to the amateur in general. In closing No matter what amateur's on that newsgroup thinks, the N9OGL SHOW is a program directed only to the

amateur radio service, not the general public. The N9OGL SHOW will be on the air for a long time and I will fight, to keep it on the air.

Rather, it was the Norwegians who split. And as everyone knows, they
ARE weird.

> not?
> Should American industry work the same way?

American industry works in the way that the government ensures they
have no competition. And if the industries become unprofitable anyway,
the government pumps money into it to keep it afloat.

This is unlike, for instance, Sweden, where they have this thing called
a "market economy" which means that if a company cannot survive in
competition with other companies, the company will simply die. On the
other hand, it's easier and less bureaucratic to start a new company in
Sweden.

The way Swedes see it, what the United States has is a more socialist system than Sweden has. And the Swedish government always tries to make other countries realize that a market economic system would be good for them. Unfortunately most people seem to be strong believers in socialism.

Hello, Dave and all

Yep, gotta go with the majority. Should this include Taiwan and China? How about the religious right in the Middle East?

Inquiring minds want to know .... :))

With all due regards from Rochester, NY

Woger has a Masters Degree? From DeVry, via correspondence?
That explains a lot. Now we know why he cannot explain RMS
voltage or negative SWR.

I'm always amazed that you are in-step and eveyone else is out of step (with you). Everyone else is lying and your words are as pure as the driven snow. Everyone else has deep, hidden secret psychosis and yours is as plain as your jelly belly stressing the zip of your flight suit. Hi!

Again I suggest that the Nurse heals (or at least heels) herself. Maybe your CAP Chaplain could (should) counsel you. Best of luck on your road to recovery.

Oh, I' am NOT "always in step"...Hardly. That's one thing Lennie
and I DO have in common.

And NOT "everyone else" is lying...

...just those for whom the facts don't match what they are saying.
(That would be a lot of what comes from you and Lennie)

The offer is still out there for you or Lennie to join me for a
jog around the neighborhood.

And since you are so interested in looking at my zippers, Brain,
you should look again. If you consider that zipper "stressed", then
you need a course in mechanical engineering to learn what "stressed"
means.

> Again I suggest that the Nurse heals (or at least heels) herself.

Oh heck, Mike. That's nothing. None of that stuff phases me. I'd begin to be weirded out if Len were to suddenly take a liking to me, to begin being cordial, to act as if there were other people on the planet who knew as much or more about a subject than he does.

If he dropped his wild rants about the Church of St. Hiram, Sermons on the Antenna Mount, his claims of being a PROFESSIONAL, his not-so-subtle references to Mr. Glock or his belittling of the careers of others, I'd be nervous that something quite unpleasant was about to take place. Then it dawns on me: How much worse could it get?

Get a reality check! Thanks to the League and the FCC today's majority
of "ham radio operators" are feeble-minded oafs, 20 questions removed
from CB. It is a chore for them to link a few coherent words together to
spew on the local repeaters, let alone asking them to commit advanced
thoughts to paper. And for $65! Yeah right! The league is taking in
a bundle every month in advertising revenue from companies selling push
button boxes to former CB ops, now ham radio appliance operators. The
League could easily afford to pay $450 per published page, and it would
never even put a nick in their budget. At least at $450 the League would
be paying an almost fair publishing price. If you think the League, the
FCC,
or Riley Hollingsworth have the best interests of ham radio in their hearts,
then I have a bridge in Brooklyn for sale.
ROTFLMAO!

$65 per published page? You certainly must be kidding or are looking for amateur junk that has no basis in fact. You can make that much flipping burgers at McRadio.

And you want drawings and photos to boot? Certainly you MUST be kidding.

Now get it up to about $400 a page and serious authors will consider submitting stuff worth publishing.

Jim

I think that was the point of Steve Adell's comments too, Jim.

Brings to bear the matter of another engineer wannabe who posts
herein on an all-to-frequent basis...I am sure he found satisfaction
getting "published" in a now-defunt Amateur Radio journal.

And I am sure it was due to the fact that his "work" never found
favor with PROFESSIONAL journals who found it laughable that he'd
submit his "work" for compensation at professional rates.

Thanks Steve,

It's 14 degrees F outside with 40 mph gusts. (Making it feel even colder.)
We've had some local houses have their trees fall over. (One of 'em into a
bedroom.)

'Tis NOT the time to repair this puppy. :-)

BTW, it appears to be a coax/connector failure. Last night when I looked
from the window, the antenna appeared intact. However, this morning, the
coax had separated from the lower PL-259 (DON'T get me started on these!)
while the antenna proper still appeared intact.

Looks like a w/e project, WX permitting. Stay warm es...

I received the QSL card for working TO0O (Martinique) a few weeks back. The caption under the call reads "That's a lot of dahs." I hadn't really given much thought at the time I'd worked Tom.

I am not going to lead you by the hand, Todd. It's right there in the items you quoted.

Now, QRZ says that you are 36 years old. I assume you have graduated from High School and probably have some liberal arts Associate's degree from Podunk University.

Go back and re-read the very items YOU quoted from Part 97.

I'll keep this message intact and will use it as reference tomorrow...Sooner if you respond to it before then.

Try, Tod...try reeeeeeeeeeeeeeeeeeeeal hard to pay attention this time.

No biggie.

Consider a call like WJ0JQY or some other combo of 0, J, Q and Y. Lotta bauds in that one! You could send N0TO twice in the time it takes to send WJ0JQY once.

--

One of the tricks of learning to use a bug is to send exercise phrases that develop your skill. My favorite is:

"SHE IS 55 ES SHE IS HIS SISTER"

Try sending that one!

> pertinent threads.

You "genrerate" lots and lots of comments. Lying comments. And start lots and lots of new threads. Lying threads. Usually shouting someones name and trying to denigrate them. Repeated again and again. Perhaps someday someone will read them and beleive them. But not anytime soon, and no one of average or higher intelligence.

> You just make silly allegations.

Steve, it was a trap. I knew you would reply because you can't help yourself as I've stated above. You're mental, remember? Oh, that's right. I know it, but you don't so you easily fall into every trap.

So you prove my allegations with your very denial of the same.

Your newsgroup bullying is predictable, and boring. Time to get together with one of your other mental modes and come up with something new.

Or better yet: Nurse, heal theyself.

Best of Luck

That's patently false. And the only thing we're taking are casualties.

FWIW, we should have sent a cruise missile to each and every facility that Saddam denied the weapons inspectors access to, as they were denied access. But no, Clinton ignored the problem for years and years and years. Eventually we came to the conclusion that he was hiding something.

Anyway, after a few palaces went up in flames, Saddam would have allowed access. Or not. His palaces, not mine. I'm good with it either way.

FWIW... yesterday on a TV station here, a guy called in to talk to a Talk Show host. Supposedly this guy was a Marine and a "War Photographer" ordered up to go into battle to take pictures. He said they came across "MANY" Weapons of Mass Destruction.... but the officer in charge denied each and every one as such BECAUSE..... and keep this in mind, he said the UN laid down the rules as to what counted and what didn't.....

1. Rockets with no fuel
2 Rockets with fuel, no coordinates listed with equipment to launch
3. Rockets with chemical, no launch pad

All were not at same site, so as to use one from the other. Etcetera, etcetera, etcetera..... The Photographer asked why are we splitting hairs here and who made the rules as to what counted and what didn't. SO.... IF those rockets HAD all the things missing, they WOULD have been indeed WMD, according to that story.

Hmmmmmmmmm..... Was the guy BSing or telling the truth? I don't know. But it is interesting to think about. Oh and Saddam DID use them before the Gulf War, so why not have them now? What did he have to hide - to not allow inspections. I'm not a great fan of this war nor the mounting life it is taking, but Saddam COULD have been a bit more forthcoming. Him and his people acted like snakes in the grass..... Tarik Aziz, I'd love to have decked him a few times for some of his remarks. Arrogant bastard. But, in the end, he sung like a Jay-Bird..... Interesting - what a guy will do to save his own ass in the end.

I'd love to have seen Afghanistan wiped off the face of the earth for OBL to have been wiped out. We were in the good eye then. Not many would have blamed us. BUT.... we went ahead and did our thing. Were we completely wrong? Maybe not, but if we're going to forego the UN's wishes, WHY remain a part of it???? IF we wish to use their services, then we should try to compromise as best as we can. However, given the huge scandal at the UN, they've shown they out right can not be trusted. I suppose you're damned if you do and damned if you don't.

But, regardless. I hope all "terrorists" are caught and rather than tried and put in jail to be fed by OUR tax dollars for life, like the bombers of the WTC the FIRST time, they be instantly SHOT. Strange, the bombers of the Federal Building in Oklahoma were facing the Death Penalty and as we know, one is now gone. These savages got life in prison. Where IS the justice? They didn't deserve to breathe past the moment they were caught. We need to deal with these ass holes for the scum that they are..

So, your irrational, Clinton-hating conclusion is that Clinton should
have barged in there and done something BEFORE we came to the
conclusion that Hussein was hiding something?

I can picture your reaction had he actually done that.

I know Dam well what it says, but I think you and all your butt buddies on here don't.

The difference between a Information Bulletin and a Broadcast is (and even a little smart ass like bathwhoreman and his little bitch julie on here could understand).

A Information bulletin is a message directed only to the amateur operators consisting solely of subject matter of direct interest to the Amateur service.

A Broadcast is A Transmissions intended for reception by the general public, either direct or relayed.

There's the difference, A information bulletin is directed to the amateur radio community, even if it's opinionated as long as it directed to the amateur radio service it's a "information bulletin" and is legal. if the program is directed to the general public then it's a broadcast.

WELL YOU FUCKING COMMIE, YOU'VE NEVER HEAR MY INFORMATION BULLETINS SO YOU CAN NOT JUSTIFY SAYING THEY HAVE NO DIRECT INTEREST TO THE AMATEUR SERVICE. PERHAPS SOMEONE SHOULD MONITOR YOU FUCKING QSO PERHAPS WHAT THE FUCK YOU TALK ABOUT HAS "NO INTEREST TO THE AMATEUR RADIO SERVICE" WHY DON'T YOU GO TO SOME FUCKING COUNTRY WHERE FREE SPEECH ISN'T ALLOWED PERHAPS THEN YOU WILL SHUT YOUR FUCKING PIE HOLE. YOU FUCKING COMMIE BASTARD.

Actually, you are a "free speech abuser". Judging by the number
of times you used the "F" word in the previous exchange, I'd say you're
angry becasue you're NOT "F"ing as often as you'd like.

Judging by th pic on QRZ, I'd have to say I know why.

> > Grow up toddyboy.

Unless he it jamming you with a carrier, he's not suppressed
anything.

Infact, he's used the very same medium and "rights" as you to
express HIS opinions. YOU are the one suggesting some kind of
"suppression".

Putz.

What bullyng? You lie, make misrepresentations and otherwise are
mistruthful, then expect everyone else to just accpet it as "fact".

The "facts" are that you are deceitful, you are mistruthful and
you lie repeatedly in a public forum.

> Or better yet: Nurse, heal theyself.

Of? You CONTINUE to make that statement, yet you refuse to answer what OF, Brian...

> Best of Luck

Never needed when dealing with you, Brain...You supply me with all the material I need.

Thanks.

And again you show your complete ignorance of Amateur radio and the rules.

> PERHAPS SOMEONE SHOULD MONITOR YOU FUCKING QSO PERHAPS WHAT
> THE FUCK YOU TALK ABOUT HAS "NO INTEREST TO THE AMATEUR RADIO SERVICE"

As long as I am in QSO with another Amateur radio station the subject can be anything I or the other station wishes. It does not have to be anything remotely of "interest to the Amateur Radio Service". We can talk about vactions, kids, grandkids, old cars, new cars, television shows, cooking, building an outhouse, the mayor, the president, and any other subject we should choose, even (God forbid) you. So your statement above just further confirms you are really a little stupid piece of you-know-what and don't have a clue, so go get a job, maybe a real life, stop living with your mommy and come back after you have grown up toddyboy.

2510. Sen. Clinton says FCC needs to go

Newsgroup: rec.radio.amateur.policy

She has no power so it doesn't matter what she said about the FCC, She
ought to look at bill before talking about filth and family values.

Here is yet another example of your ignorance. Amateur radio bands are not PUBLIC AIRWAVES. Amateur radio is a licensed service for the exclusive use of licensed amateur radio operators. The PUBLIC AIRWAVES are the standard AM, FM, and TV broadcast bands, to name three. I'm not making this up, this is how PUBLIC AIRWAVES are defined within the meaning of the law. Go back and study up for the novice test.

I'd rethink that, Ken.

Hillary has more power than any thieving white woman should be
allowed, but trust me, she's coniving and will have her way.

There are women out there who will vote for Hillary Clinton based
upon no other criteria than she IS a woman.

Forget that her husband was one of the most prolific pathological
liars in the White House in over 200 years and she helped him. (No
wonder folks like Lennie Anderson and Brian Burke don't think twice
about doing it...Clinton set the trend...)

Forget that she still has never satisfactorially answered the
questions about her real estate dealings. Heck no! Martha Stewart
went to jail for 6 months just becasue she acted on a stock tip, yet
Hillary won't pay so mauch as attention.

Forget that Hillary was responsible for STEALING real property
from the White House as she and Billary were on thier way out the door
in 2000. "Oh...that's not ours? Well...I guess we'll put it back..."
Dodged ayet another bullet.

Forget that she facilitated (or at least tolerated) her husband's
philanderings all-the-while promoting herself as the champion of
women's rights and equal opportunity.

As Billary's "Health Care Advocate" in 90's, she didn't do a
single worthy thing. She and Bill brandished a "health care card" at
his first "State of the Union" address, but that was the end of it.

Health care benefits for the uninsured, under-insured, the aged and catastrophically ill or infirmed are threadbare, to say the least.

But, unfortunatley, people will still vote for her...Again, just because she wears a skirt.

>someones name and trying to denigrate them. Repeated again and again.
>Perhaps someday someone will read them and beleive them. But not
>anytime soon, and no one of average or higher intelligence.

Absolutely. That's been the style of the Avenging Angle
of Dearth for years.

It's a common propaganda technique familiarly called
"the big Lie" wherein some untruth is repeated over
and over and over and over again in public in an
attempt to make others believe it is "true." It isn't.

The "big Lie" technique was used rather successfully
by the Nazi party in the 1930s and 1940s.

Lately, he has tried to horn in on topics of
"professional writing" AS IF he is accomplished
in that or "knows" about it. Not so.

The "other" Steve (Adell) tried some Troll topic
(probably after reading the ARRL's Guide for Authors)
and proclaimed a few things out of his imagination.

$65 per PRINTED page compensation doesn't even meet
minimum income wage values for any author. Writers
in QST or QEX do their thing to either share their
HOBBY experiences or to get their name in print
(sometimes called "ego-boo" for ego-boosting). In
providing monetary compensation...under terms that
cashing the compensation check automatically gives
the ARRL "first rights" to publishing...the ARRL
also retains the right to REPRINT the author's work
anyplace, anytime the ARRL wants WITHOUT paying the
author any more money. [that's how ARRL gets the

material to fill their Handbook and other products]

Jim Weir wrote the correct conditions in his previous
message.

Avenging Angle of Dearth wrote more scurrilous LIES
about my professional writing (published works sold
for money). He claimed that "other" publishers
(besides the old Ham Radio magazine sold to CQ in
1990), especially the "professional" ones, will NOT
consider my submissions. That is quite untrue. I've
listed the publications I've been in since 1990 in
here. Little Stevie didn't bother to check up on
those. Hardcopy references of those will NOT cause
any published work to disappear, therefore they are
valid references.

Little Stevie uses "professional" in the most general
form and never gets specific. The "big LIE" technique
again. He cannot name a single "professional"
publisher becasue he doesn't read those "professional
journals." It is doubtful he could understand them
if he did. :-)

>> You just make silly allegations.
>
>Steve, it was a trap. I knew you would reply because you can't help
>yourself as I've stated above. You're mental, remember? Oh, that's

>
>So you prove my allegations with your very denial of the same.
>
>Your newsgroup bullying is predictable, and boring. Time to get
>together with one of your other mental modes and come up with
something
>new.

The Avenging Angle of Dearth will NEVER admit to any
wrongdoing. :-) Hasn't done so yet in here. His
style is a sour soliloquy of Attack, Attack, Attack!

No doubt that is psychologically satisfying to him,
but it is a tedious time-waster for all others. It
makes him look foolish to others, but he can only
see himself and his mighty machismo displayed
triumphantly on his own screen.

Big badass dave does the same sort of thing...with
(at least) some slight increase in writing style.
On the other hand, he is incapable of Letting Go on
a subject he didn't "win" in here. He apparently
feels he MUST "win" and, when that doesn't happen,

resorts to the Personal Attack and manufacturing of
"reasons of others" which don't exist. His ego is
larger than the monstrous one of Robeson's, capped
with arrogance worthy of a stereotypical prussian.

>Or better yet: Nurse, heal theyself.

...some things may be beyond the capabilities of
modern medical science.

That's funny. I was watching an episode of the japanese "You-gee-oh"
cartoon with my son the other day. There was the antagonist with a
deep "commanding" voice that kept shouting out the concept of
operations, the order of battle, and the rules of engagement. I closed
my eyes and could imagine that it was Steve on the television doing the
shouting. Hi! What a riot. Now I know where he gets his material.

Some people get like that when they've operated amateur radio from dx entities other than Vietnam. Lots of fun, but you can't take it too seriously. At the end of the day it's still just a hobby.

Aw heck, Dave, give credit where it's due! All of those behaviors are
classic Len Anderson. He manages to do at least 3 of them in almost
every post, and it's not uncommon to see all 4 in a single post of his.
Sometimes he manages to do all 4 in a single paragraph.

> He won't answer a question in a straightforward manner.

Most of the time he won't answer questions at all. Yet he'll demand
answers to *his* questions.

The 3965 pirate put out an update on the KC dealer who sells
CB amps. legally. There was a new court ruling in his favor,
supposedly. He had the dealership owner on the air for a live
interview. Did anybody monitor the broadcast? Any court
ruling that goes against the FCC is never put out in a press release,
just the ones that go in their favor. Sure would like to know if this
guy is now permanently cleared to sell CB amps, non-type approved
radio gear, etc.

Why is it a "Personal Attack" to disagree with your comments, Len?

You wanted FCC to deny amateur licenses to anyone under the age of
14, regardless of their ability to pass the required tests.

Yet you have not produced one single bit of evidence that the licensing
of people under the age of 14 has produced *any* problems for the
amateur radio service.

Not one example of an under-14 ham violating any rules, getting an NAL
or enforcement letter, or even complaints from other hams.
>
> Okay, I'll wait until you stop cheering for all the
> "mature, responsible" six-year-olds featured on the
> ARRL news as "world's youngest hams?" Riiiiight...

You would forbid people more than twice as old from getting an amateur
license, Len. Without any evidence.
>
> How about the 9-year-old "extra?" A "mature,
> responsible, law-abiding" pre-teener? :-)

Yes.
>
> Riiiiight...ALL of them wouldn't think of operating
> without parental supervision, would they? Uh-huh.

Why should they need parental supervision to operate? FCC,
the expert agency on US civil radio regulation, thinks they're
qualified.

Back in 1948, a 9-year-old local girl passed the Class B exam. In front
of the FCC examiner.

This was back when the license test required diagram drawing and had
essay questions. 13 wpm code, sending and receiving, too. No Novice
class back then, either, it was Class B from a standing start.

Now of course her dad was a ham and she had lots of help. But if the
FCC then and now thought young people were qualified to be hams, and
you have no evidence of problems caused by their youth, why should
there be an age limit?

> Tsk. I've never pursued the matter with the FCC
> since 1999 but it seems some in here just can't let
> it go.

Why should they? You have not admitted that age requirements for a ham
license are a bad idea.

> They MUST bring it up again, time and time
> again as if this is the most hideous of gaffes,
> practically a felonious act against the noble, law-
> fearing amateurs who never, ever do anything wrong.

You would deny licenses to people based solely on age, without
any evidence of age-related problems.

That's just plain wrong.

Figures - it was on fone. If it had been a CW test, everything
would've gone fine.

LRod Hubbard, did you say irrational? Clinton-hating? Those two concepts simply cannot be used in the same sentence. Having a low regard for Clinton is very, very rational.

Anyway, it was Saddam who agreed to the weapons searches, under the Bush administration. Saddam agreed to everything, even a second war for non-compliance, so Clinton wouldn't have been barging in - Saddam had already granted permission. All Clinton did was keep an 8 year log of non-compliance. He da man!

What I do remember of the Clinton Administration was all the news about Lewinsky, and all the news about the weapons inspectors being denied access.

That and him letting the EPA gas-mileage requirements fall flat on the floor putting us in the fuel predicament we currently find ourselves in. Wasn't it him and Algore being referred to as the environmental administration? Hi! Now we've got to go after Arctic Refuge oil years and years before it would have been necessary otherwise.

Hell, I don't even hold a grudge about him making an income tax-hike retroactive to before he took office.

Then there was his boy, Greenspan, saying that he had to put the brakes on the economy. Those words keep ringing in my ears as Ohio keeps

losing manufacturing jobs for burger flipping jobs. And we're sick of burgers in Ohio.

I'm sure you get the point.

Source record: 104049

MAKING MONEY I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups and came across an

article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, "Yeah right, this must be a scam", but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6

names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at

least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: "what have I got to lose except 6 stamps and $6.00, right?" Then I invested the measly $6.00. WellGUESS WHAT!!... Within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over

$10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more than that on the!! Let me tell you how this works and most importantly,

why it works.... Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy! Suggestion: Read this entire message carefully! (print it out or download it.) Follow the simple directions and watch the money come in!

It's easy. It's legal. And, your investment is only $6.00 (Plus postage) IMPORTANT: This is not a scam; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are adhered to, you will receive extraordinary dividends. PLEASE NOTE: Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the

money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list. Here are the 4 easy steps to success: STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the

U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal! Mail the 6 envelopes to the following addresses: #1)Dan Warner 2812
W. 1st. St. Duluth, MN 55806 #2) Karen Green 50 Gillinder Street Rockhampton Qld Australia 4700 #3) Ryan Lake 41130 Congerbay Dr Harrison Twp, MI 48045 #4) Zac Inchley unit 82/ 128 Benowa rd Southport

Qld Australia 4215 #5) Carl Baker 2267 N. Kedzie 1st floor Chicago, Illinois 60647 #6) Jason Otto 600 s. 1st st. Waterford, WI 53185
STEP 2: Now take the #1 name off the list that you see
above, move the other names up (6 becomes 5, 5 becomes 4, etc.) and add

YOUR Name as number 6 on the list. STEP 3: Change anything you need to,

but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember, the more

you post, the more money you make! This is perfectly legal! If you have

any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal laws. Keep

a copy of these steps for yourself and, whenever you need money, you can use it again, and again. NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the

notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.) So, as each post is downloaded

and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches

the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business! ---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS---------- Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning

of this letter and drag your cursor to the bottom of this document, and

select 'copy' from the edit menu. This will copy the entire letter into

the computer's memory. Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list. Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to. Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.) Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in

the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one!
Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to

the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT. ** Now the WHY part: Out of 200 postings, say I receive only 5 replies (a verylow example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of

the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2

and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What

are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups

everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual

internet. Remember, play FAIRLY and HONESTLY PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at

it this way. If you are of integrity, the program will continue and the

money that so many others have received will come your way

well your very wrong, in 1934 the US congress declared that the electromagnetic spectrum belong to the public (thus the Public airwaves)The FCC was created to license stations in the public interest, Convenice, and Necessity and to allocate the spectrum for services. The FCC can refuse or grant license if it is in the Public's interest, convenice, and necessity. I would suggest you go back and study the law.

granted, I don't know if you heard the transmission or not, but what I do know is that this little bastards on this newsgroup began complaining about it when I posted the first message of the up coming transmission. claiming it was a broadcast, and not one of them heard the signal because it hadn't even started.

WHAT "interest"...?!?! Of what great importance do the meanderings of a megalomaniac like you have being broadcast on 20 meters?

This here proves that you'venever heard the transmissions, but let me enlighting you on some of the past transmissions Pecuniary Interest, Content Control in the Amateur Radio Service, The Ionosphere and Skywave Propagation up coming porgrams include, Troposphere conditions, Basic Electronics Pt.1 and Pt.2, Idea's for new digtal systems, just to name a few. All are amateur related and thus legal.

I would suggest you go back and look at the definition of what a broadcast is because IMHO you don't know. If you don't have a copy of the FCC rules here's the definition here's what definition for bradcast is (From the ARRL's website)

(10) Broadcasting. Transmissions intended for reception by the general public, either direct or relayed.

No where in the FCC rules governing the amateur radio service does it state that an information buletin can not be opinoinated about issues dealing with amateur radio. If you still don't believe me prove it here's one link to the rules

http://www.arrl.org/FandES/field/regulations/news/part97/

well no offence but your full of SHIT! I suggest you talk to the Fucking FCC and they'll tell you same thing. I suggest you go talk to members of either the House Subcommittee or the Senate Subcommittee on Telecommunication and ask them, and they will tell you the same fucking thing. because I don't really think you know what the fucking law is. Like all amteurs you look only at the amateur rules unaware that there are other rules that apply to the amateur radio community. But go talk to FCC or the subcommittees and they will tell you the same thing. because frankly you don't know what the fuck your talking about.

Once you take "news" and add "opinion", it becomes editorial and
is no longer within the realm of an "information bulletin".

You're an idiot, Todd, and unfortunately for the rest of us it's
illegal to shoot idiots just on principle. Otherwise this episode
would be over already.

But it's illegal even for idiots to break the law, and sooner or
later the FCC will come knocking on your door.

Good luck trying to pass your rationalizations off on them.
They've logged a lot of time getting blockheads like you off the air,
and on occassion, into jail...where you belong.

Correct. And the "Big Lie" ("I am going to get my Extra Lite out
of the box", for one example, or "Unlicensed devices play a major role
in emergency comms" for another) is well used by Leonard H Anderson and
Brian P Burke.

Both are persistent liars. (I started to say "accomplished", but
so far neither one of them has been very good at it since they always
seem to get caught.)

> > The "big Lie" technique was used rather successfully

ohhh poor Seve, you have to get mad and go to name calling when you
can't prove or show what law backs you stupid statements. I really
don't think that will happen, because the crybabies on here that are
complaining don't have the BALLS to do anything, except complain on
here. The majority of those complaining are probably not really amateur
operators. I think your forgetting that the difference between a
broadcast and a information bulletin is a one is directed to the
amateur radio community (information buletins) and the other is
directed to the public (broadcast). Finally as long as my bulletin is
directed to the amateur community the FCC isn't going to do shit,
because they can not control the content of any station. It is a
bulletin and is legal so go cry to someone who cares.
Todd

YOU have already proven it. YOU cited the very paragraphs of Part
97 that will ulitmately be your undoing. That you don't care to admit
it is YOUR failing, goofball.

And TRUST me, Todd...I am not "mad"...Frustrated, maybe, that a
profane, narrowminded manchild such as yourself is allowed to act this
way in public, but hey, if you like self-humiliation, who am I to deny
you your jollies...?!?!

YOU just make it easy to make a fool out of you.

Thanks.

You can stop repeating that paragraph over and over, Todd, because
YOU are the one who needs convincing...not me.

You're gonna jam yourself up with the feds. An Amatuer Radio
license is a PRIVILEGE, >>NOT<< a "right", and if you continue your
present course, you'll either lose yours or lose a lot of hard earned
money fighting the FCC or paying the NAL's when they arrive.

> Finally as long as my bulletin is
> directed to the amateur community the FCC isn't going to do shit,

Sure they can control the content of your station. It's called a
"Cease and Desist" order.

Now...I am wondering just one thing...(SCROLL DOWN...)

And one thing only....(JUST A BIT FURTHER.....)

Just how stupid can N9OGL REALLY get and still be mistaken for
human...?!?!

Maybe it's completely arbitrary like some current licensing
requirements and would fit right in and not be noticed except by some
fringe group claiming "Unfairness."

So at what age did you get your first license?

It's not about being "humor impaired".

It's about not being able to tell with you since you seem to
interchange reality and non-reality so frequently and without exception
to the on-going conversation.

Not to mention only you and Lennie are laughing at it.

Anyone have a mobile radion installation in a Mazda vehicle? Mine is the SUV-style and I am just looking for ideas on antennas that have worked, comments on any noise problems, placement of radio, etc.

Radio placement in new vehicles can be a problem. If this is a VHF radio, I have an idea based on what I did in my Suzuki Vitara.

I used one of my coffee cup holders on the center console. I made a plaster of paris insert that fit in the hole, had a copper pipe set in the middle of it, and attached the radio to the copper pipe. I put plastic wrap around the inside of the hole. to keep it from sticking, and when the plaster cured, I took an old black sock, plopped the plaster piece in it, cut the sock off at the top of the piece, tucked the edges in and tied it off with a tie wrap. Sounds strange, but it actually looks pretty good, and the radio can come out and be put back in in seconds.

I had occasion to meet and chat with Reed Hundt a few times. There
is no doubt in my mind the man did not know his proverbial ass
from a hole in the ground when it came to functioning as head of the
FCC. Incompetent comes to mind, but that is far too polite to describe
the man. However, he was well-connected, which once again proves
it is not what you know but WHO you know (the Clintons).

I had an aluminum custom rear mounting plate made that attaches under the bumper to the chassis - using existing mounting holes. But it's a 626 auto, not an SUV. I like mobile CW. It was lots of fun, commuting to downtown Cinci through all the lights, with a 5-speed manual transmission and sending CW wit the Bull Dog paddle in the cup holder. Still safer than a cell phone - my head was never leaning over to hear the telephone. HI Now I use the MFJ "screwdriver" with the 12 foot extension up - when I'm waiting for the XYL to do her shopping. (The MFJ "screwdriver" is a manually adjusted base loaded coil, but fairly easily set to any band with the coil and pull-up sectioned [zipup] vertical element.) Let me know if you find a good solution for the Mazda alternator noise. That was always a problem in commuting days when I used a 4-band Comet HF antenna on the road.

Loaded questions? The two questions I posed to you some days ago weren't loaded at all. They were in direct response to an accusation you made.

> Okay, big badass dave, here's a question for YOU:
>
> Where SPECIFICALLY and when SPECIFICALLY did you
> see "combat" in Vietnam sufficient to make you this
> big badass "combat veteran" you claim for yourself?

What does that have to do with anything here on r.r.a.p? You brought up my Vietnam service some posts ago as a part of personal attack. It wasn't relative then and isn't now. At no time did I claim to be a "big badass" anything. Your latest tactic is a very good illustration of what I wrote about you--that the "Never Defend Your Own Points" portion of the material on the link supplied by Jim is classic Len Anderson. What brought up the issue of answering a question with a straight answer was your recent comment below:

"Both Heil and Robeson MUST
triumph in the word-fights, will never ever admit to any
wrong-doing and always try to turn around things so the
other party is at fault."

I responded to your statement with relevant questions:

"Let me ask you a couple of plain question to see if I can get some straight answer from you, Len. When is the last time that you ever admitted to any wrongdoing in here? When is the last time you were involved in a scrap here in which you didn't try to turn things around so that the other party appeared to be at fault?"

You've still not provided straight answers to the questions. Perhaps when and if you do, we can discuss my Vietnam service.

I love your PROFESSIONAL writing style, little wizened Leonard.

> On the other hand, he is incapable of Letting Go on
> a subject...

Perhaps he simply doesn't choose to.

> ...he didn't "win" in here.

There's a competition? Do you have big winnings? Maybe you can win a
case of those message knuckles of which you've written.

> He apparently
> feels he MUST "win" and, when that doesn't happen,
> resorts to the Personal Attack and manufacturing of
> "reasons of others" which don't exist.

"Big badass Dave"

"not wearing the SS uniform with twin lightning bolts but otherwise
acting like a downsized Gestapo veteran"

"The Avenging Angle"

"concerning the Avenging Angle's further adventures in 'waste of time'"

"Jimmy Who and cronies"

"Dee Flint had a hissy fit on Thurs, Mar 3 2005 11:59 pm and hastily
scribbled the following diatribe"

"'Dee Flint' (calmed down from a previous hissy fit) jumped into a
so-called conversation and shouted out"

"Go join Mama Dee who wants to 'punish' her 'children' that don't do
what they're told!"

"Mr. Glock likes it...it's nice and shiny"

"My representative Mr. Glock will address them in that case. [he is very accurate]"

"If the Coslonaut thinks Smith Charts are obsolete"

"Idiot. I 'looked it up' a long time ago."

"when some insufferable, self-righteous 'mama' wants to 'discipline children as parents do'"

"Tsk. I'll bet Kellie told that to the Captain at dinner. Too bad Tenille wasn't there"

"Poor Dan never got his crypto clearance"

"Widdle Stebie gonna have me BANNED from here"

--Leonard Anderson

Good old personal attack. It must sting to have your own words tossed back in your face, huh?

> His ego is
> larger than the monstrous one of Robeson's, capped
> with arrogance worthy of a stereotypical prussian.

I'd paste one of your multiple paragraph tales of your military experience or of your civilian electronics exploits, Leonard but I think we've all got them memorized.

Len's posts on the subject indicate that he has problems with children
having done something which he himself has not attained.

> > How about the 9-year-old "extra?" A "mature,

> license are a bad idea.

He issued the comments to the Commission. He never followed it up with
a retraction if he changed his mind. All indications (even those in
this recent post) are that Len stills believes that licensing children
is a bad thing.

> > They MUST bring it up again, time and time

Maybe it's because we're the only ones that understand the Morse Myths that Aaron Jones used to keep a list of. Everyone else may have been rightiously offended.

Anyway, we're not just laughing at good humor, but we're laughing at you too.

> supervise you, Jim?

Not in my amateur radio operations. I was licensed at age 13, and was
the first amateur radio operator in my family.

But I was "in radio" a lot earlier, building receivers and such.
In fact, the way I learned Morse Code was to build a simple
receiver and code-practice oscillator from scavenged parts, and
listen to hams use it on the air. Also sending with the oscillator and
key. My Elmers were books.
>

> long string of gaffes.

Just a bad idea.

Let us also not forget that Len accused the VEs and ARRL of "very mild
fraud" in connection with some preschoolers being licensed. He appears
to claim that no child that young could possibly pass the tests. Yet he
does not know any of the people involved.

> > You would deny licenses to people based solely on age, without
> > *any* evidence of age-related problems.
>
> > That's just plain wrong.
>
> But we'll never see agreement on that from Leonard.
>
Here's a couple of plain, non-loaded questions for Len:

What problems has the licensing of people under the age
of 14 caused the amateur radio service?

What enforcement actions has the FCC pursued against radio amateurs under the age of 14?

What should FCC do about the current licenses of under-14 amateurs?

I doubt we'll get any straight answers, though.

I see a problem in Len's statement. Why should he have trouble
"integrating" youngsters in an activity in which he is not involved?

Good thing for guys like us that no such rule has ever been seen as
necessary by the FCC. Finland once had a rule where no one under 15
could obtain a license. They've since done away with it.

> > > > How about the 9-year-old "extra?" A "mature,

And that worked for you. I learned the code in the Boy Scouts and
simply brushed up over several weeks. I was lucky enough to have
mentors in two different towns. I moved before W8MN could administer
the exam. W8MN arranged an introduction to two local Novices and the
fellow who ran the local TV sales and service shop in my new town. Buzz
Collins K8CFT then administered my Novice exam.

That isn't news though. Len has made a number of accusations about the ARRL being dishonest. He never back any of them up with a single fact.

No, it wasn't. It was in England.

And people ususally don't just "harrass" someone without some
provocation. I doubt the alleged assailant was completely at fault.

Brian P Burke has yet to produce anything from me that is not
truthful.

And I think yoiu meant "palpable", Brian...But then we ARE used to
you trying to use nursing terminology only to get it wrong.

What IS "palpable" is the sense of how frustrated you are getting
by being constantly backed into the corner.

The funny part is that you are the one backing you into it!

Face it, Brian...you're an idiot. We have.

No one here is "offeneded" by any one persons likes or dislikes of
Morse Code use, testing, applications or history.

We ARE offended by people (such as you and Lennie) who find it
necessary to repeatedly and foolishly lie and misrepresent so many
other facets of Amateur Radio in general and Amateur operators in
particular.

> Anyway, we're not just laughing at good humor, but we're laughing at

WHAT RULE?? What you don't understand is this, As long as the information bulletin is directed to the amateur radio community regardless if it's opinionated or news it legal. As LONG as it is DIRECTED TO THE AMATEUR RADIO COMMUNITY and deals with AMATEUR RADIO ISSUES. Boradcasting is DIRECTED TO THE GENERAL PUBLIC. there's the difference between broadcasting and information bulletins. The only reason they can order a cease and desist order is if you violate the law. The only CONTENT the FCC can control is Obscene and Indecent material. The US Supreme Court in 1969 ruled that a person didn't have a First Amendment to uses a radio station without a license, Upholding the License system of the FCC. A person who has a license has a First Amendment right to use a station, A right given to the licensing holder byn the federal governement. Section 326 of the communication act forbids the FCC from content control except, for obscene and indecent material. But back on the issue at hand, If the FCC wanted Information Bulletins to be only "news bulletins" the FCC could of narrowed the rules down to state that, but they didn't because, it would of made it too narrow and may not hold up constitutional in the courts. As I've stated may times before, information is 50% facts and 50% opinion and in a FREE SOCIETY we need both.

Ever read the book "Radio Rescue"? True story:

Back in the early 1920s, a young boy in New York City became
the youngest ham in the country, being licensed at 10 or 11
years of age. He and his ham station were instrumental in
emergency communications during a Florida hurricane - all before
he was 14.

Len would have forbid him from getting a license.

> Finland once had a rule where
> no one under 15
> could obtain a license. They've since done away with it.

Canada too, IIRC.

btw, when cb required a license, there was an age requirement.
I think it was 18, but it could have been 15 - I'm not 100% sure
because I was never involved in cb. Yet that age requirement didn't
help cb's problems...

Perhaps Len wants amateur radio to be more like cb...

Anyone can. Just go to fcc.gov, search ECFS, using as criteria Len's
name and the proceeding number.

Of course it's a scan of a *paper* submission, because Len couldn't
figure out how to get ECFS to work for him back
then.

Most of the dozen-plus pages are a diatribe against Mike
Deignan, which is interesting because Mike turned out to
be a no-code-test person in his comments to FCC.

The age thing is last in the document.

It is curious that Len's comments were filed after the comment
period but before the end of the reply comment period. That and
the use of paper made it practically impossible for anyone to file
reply comments to Len's filing before the deadline.

It was because 18 is the "age of majority" for most legal
purposes. A minor couldn't be held liable.

Why it matters for CB and not for Amateur Radio is beyond me.

> Perhaps Len wants amateur radio to be more like cb...

Perhaps because Len epitomizes CBers...?!?!

A "bulletin" contains information that allows the operators of
other Amateur Radio stations to make informed choices. Those bulletins
are made up of information that is based on FACTS, not opinion.

> As LONG as it is
> DIRECTED TO THE AMATEUR RADIO COMMUNITY and deals with AMATEUR RADIO
> ISSUES. Boradcasting is DIRECTED TO THE GENERAL PUBLIC. there's the

Keep telling yourself that over and over and over, Toddie.

Lame Vein Baxter in Maine has been telling himself the same thing
over and over, but he still has federal marshals knock on his door on
occasion. He's dodged the bullet so far, but he can't pass wind
without getting his name in the Federal Register for rules violations.

Get that education you were sparking about, big boy...And if you
ever need a clearance for a federal contract for work, good luck
getting it with a history of federal citations under your belt. Any
company you may work for in the future that requires clearances will
have to ID you to the feds (as they will anyone connected with any
particular job). How long do you think they will keep you around when
a multi-million contract hangs on having a non-acceptable person on the
payroll?

Is the "N9OGL Show" worth THAT...?!?!

The First Amendment of the Constitution is NOT the enabling
regulation for Amateur Radio, Toddie. The Communications Act of 1934
as ammended is.

You DO NOT have the "right" to arbitrarily broadcast and say it's
OK because it's "free speech". Not in a one-way transmission on any
allocation in the Amateur Service, you don't.

Propagation data, operating times of DX station, LEGITIMATE Morse
Code practice or knowing if a "communications emergency" exists on any
given frequency or band has absolutely NOTHING to do with "opinion",
Toddie.

> Todd N9OGL
> FREE SPEECH AVOCATE

"Todd, N9OGL, Free Speech Abuser"

You're an idiot, Todd, but it's correctable. At least if you act
soon.

I wonder if that is perhaps because ham radio goes back to a time when people were believed to be responsible at a younger age even though they may or may not have been able to sign contracts, etc. That was a time when completing the 8th grade was still considered sufficient for most people and they often then went to full time work rather than going on to more schooling. They were considered adults at least functionally if not legally. Even quite young children sometimes worked instead of going to school.

On the other hand, CB was set up at a time when people were expected to stay in school through high school and people's perceptions changed that teenagers were still children rather than people in the early stages of becoming adults.

Of course this is all just speculation but it's fun to think about.

It's impossible to tell from his postings. It would appear not that he wants it like CB but that he hates amateur radio and amateur radio operators.

Wow, Mike! So, let me get this straight...you have an installation where, because of the custom base you designed, you can lift the whole "kitandkaboodle" up out of the cupholder? I hope I have it right.

That's a great idea--and maybe even better in terms of conceptually. I am going to think about all the moldable, bendable, creatable (where things like plaster of paris AND that acrylic stuff and others) are concerned and see what I can come up with.

My husband's company is a canvas products company and for years I have been trying to conjure up a "mobile sling" for radio installation in vehicles where--especially in emergency conditions--the sling could be removed from a vehicle and placed onto the body, another car, wagon, etc., for operability in remote areas. And, yes, I count in the battery pack space needed, etc. Haven't come up with one yet.

Thanks, Tom! My absolute heart-throb of a vehicle is the Xterra! My absolute had-to-have-'cause-I-could-aford was my Toyota Tacoma, spiffed up with the SR5 package and all the good stuff: bed liner, etc. However, my parents are getting to the point where I had to confront transporting them someday and my mom had an awful time getting up into my pickup truck. And, for the four of us--mom, dad, hubby, me--to go anywhere in one vehicle was not even in the picture.

Now, they--the parents--had gone out and bought a T&C van...but I just don't relish those types of vehicles. Maybe once I tried them (vans) it would be OK...but they just don't look like something I want to be driving as even I get older. I am a turn-my-head-all-the-way-around-to-look-over-my-shoulder driver, and I sure would have to have a owl's capability to see as far back as I'd like to with a van...LOL

Gotta dash...no pun intended (referring to the multitude of dashes in my post: sorry)...

Hey, by the way, my sis is up in Allentown. You around there anywhere? She just moved back up north a couple of years ago after having been in Texas for a little over 20 years. She LOVED the winter this year, as would I. We are all originally from up above Albany, NY--so long, hard, deep Winters still remind us of what a great challenge it was to get from one season to the next!

Bull, Information is both Facts and opinions, and again the FCC rules
do not state that opinions are not allowed.

> > As LONG as it is

Hey that's what the law states, the only difference between the two is
one is directed to the amateur radio service and the other is directed
to the public.

violations.

The resaon last time I checked they were going after Baxter K1MAN was
because of interference, and not being at the control point. I also
found this from NEWSLINE:

ENFORCEMENT: FCC AGAIN WRITES TO K1MAN

The FCC has again written to Glenn Baxter, K1MAN, and the commissions
note
has both good and bad news for the Belgrade Lakes, Maine radio amateur.
On
the positive side, the April 14th letter informs K1MAN that a review of
his
transmissions indicates that he is complying with the Amateur Service
regulations
regarding broadcasting and bulletins and station control.

The negative? The FCC alleges that K1MAN is in violation of rules
regarding use
of his Amateur station for pecuniary interest and those regarding
deliberate
interference to ongoing communications.

Also, the letter again told Baxter that his "felony affidavit
complaints" will not be
accepted by the regulatory agency. He was also reminded that all
frequencies in
the Amateur Radio Service are shared. No frequency is assigned for the

exclusive use of any station, and that Baxter's station has no
greater rights to a
frequency at any particular time than does any other Amateur station.

http://arnewsline.wb7tjd.org/news1396-2004-05-14.txt

My bulletins are legal, I'm not causing interference, nor am I doing
any "pecuniary intrest", I'm at the control point when my program is
running and my programs are amateur related. The problem is pea brain
bullhead morons like you who can't get over the fact that it's legal.

The rules state (from the ARRL Website)look at (b)(6)

97.111 Authorized transmissions.
(a) An amateur station may transmit the following types of two-way
communications:

(1) Transmissions necessary to exchange messages with other stations in
the amateur service, except those in any country whose administration
has given notice that it objects to such communications. The FCC will
issue public notices of current arrangements for international
communications;

(2) Transmissions necessary to exchange messages with a station in another FCC-regulated service while providing emergency communications;

(3) Transmissions necessary to exchange messages with a United States government station, necessary to providing communications in RACES; and

(4) Transmissions necessary to exchange messages with a station in a service not regulated by the FCC, but authorized by the FCC to communicate with amateur stations. An amateur station may exchange messages with a participating United States military station during an Armed Forces Day Communications Test.

(b) In addition to one-way transmissions specifically authorized elsewhere in this Part, an amateur station may transmit the following types of one-way communications:

(1) Brief transmissions necessary to make adjustments to the station;
(2) Brief transmissions necessary to establishing two-way communications with other stations;

(3) Telecommand;

(4) Transmissions necessary to providing emergency communications;

(5) Transmissions necessary to assisting persons learning, or improving proficiency in, the international Morse code;

(6) Transmissions necessary to disseminate information bulletins;

(7) Transmissions of telemetry.

again Nowhere in (b)(6) does it state that a information bulletin is a "news bulletin" nor in the definitions (see below) does it state that information bulletins are "news bulletins"

§97.3 Definitions.

(25) Information bulletin. A message directed only to amateur operators consisting solely of subject matter of direct interest to the amateur service

The dealership is still operating. He is still in business, still
selling CB amps, non-type approved radio gear, high power CB sets,
and much other interesting electronic stuff, cell phone jammers, etc.
There's a lot of chatter on 27680 about the place. The claim is it is
all being done legally.

You didn't answer my question, Todd....

Is your "show" worth the potential loss of income, both due to
NAL's and fines, or due to a loss of earning potential over federal
charges and indictments?

> > Propagation data, operating times of DX station, LEGITIMATE

"...OF DIRECT INTERST TO THE AMATEUR SERVICE."

Todd's spin and opinion are not facts, but are indeed, only spin
and opinion, and are of ionterest only to Todd.

"Today, the FCC announced......" is newsworthy and of potential
interest to Amateurs.

"Well, here's what I think..." is Todd running off at the mouth
in violation of the broadcasting prohibition, when not engaged in a
bonafide two-way conversation.

> > > Todd N9OGL

I disagree. Some minors can get driver's licenses in most places, which is a far more dangerous activity than being allowed to use a 5 watt, channelized, type-accepted 27 MHz cb transceiver according to cb rules.
>
> Why it matters for CB and not for Amateur Radio is beyond me.

I think the real difference was that a cb permit required no test, no skill, and no demonstration of ability of any kind except for the ability to fill out the application form and send it in.

I think FCC thought, back when cb was created, that denying cb permits to people under 18 would insure that the vast majority of cb users would display mature, responsible on-air behavior that followed FCC rules. Unfortunately it didn't work out that way.

(25) Information bulletin. A message directed only to amateur operators consisting solely of subject matter of direct interest to the amateur service

personally my doubt is that what he has to say is really 'of direct interest to the amateur service', but that is just my opinion.

>
> > Todd N9OGL
> > FREE SPEECH AVOCATE

free speech is great. of course it is also my free choice to not waste my time listening. as with others that spew on the bands, turn the big knob if you don't like what you hear... there are plenty of other more interesting things to do than listen to someone who you don't like.

Amateur radio has alway attracted more than its share of nut cases.
N9OGL wants to express himself, as he was taught in special education,
but amateur radio is definitely NOT the place to do it. He doesn't
have the intelligence to run a legitimate "show" or an interesting
talk-opinion-information whatever, such as you might find on the AM
broadcast band, which is the legitimate place to do it. He is totally
incapable of such an endeavor; amateur radio is just the easiest route
to spew his bullshit. What a putz.

Class A and B cb go back to just after WW2. Yet IIRC, the age
requirement goes back to the very beginning.

> Of course this is all just speculation but it's fun to think
> about.

The most important factor is that an age requirement did *not*
insure mature, law-abiding behavior on cb.

Since Len doesn't answer questions in a straightforward fashion, there's no way to know for sure. But Len never has anything bad to say about cb, and rarely if ever has anything good to say about amateur radio. That tells a lot.

I've pretty much copied your killfiling of Len's tirades, Dee. The analogy of the fence concealing the landfill is excellent.

He heard they were having an opening to out of band Frenchmen on 6 meters and decided to check in on it. The one amateur op he found had the event sewed up, so he returned.

There is no law that forbids anyone the use of amateur radio in a life
or death emergency.

Would an arbitrary barrier, such as an age 14 barrier, have prevented either you or Jim from obtaining an amateur license?

Kelly has already gone on record as having began his amateur career sans any licensing whatsoever.

I can't take credit for that analogy however. I forget who did post it.

However, I probably would not object strongly to a landfill as it provides a
necessary and useful function in our society.

Yup! After molding the holder, the sock around it makes for a snug fit,
and it looks pretty nice. And the ability to lift it out is handy

> That's a great idea--and maybe even better in terms of conceptually. I am
> going to think about all the moldable, bendable, creatable (where things

> see what I can come up with.

Even stuff like Play-Doh can work because once it dries you cover it
with the outer cloth, and it looks okay. I must admit, pouring the
plaster of Paris was a little unnreving ni a new vehicle, but it worked
okay.

> My husband's company is a canvas products company and for years I have been

Well, you could maybe incorporate the batteries into the cup holder
mold part. They'd have to be rechargeable of course, and it would be a
bit more work, but I think it should work.

What did she steal? (Or should I say - what didn't she...)

> There are women out there who will vote for Hillary Clinton
> based upon no other criteria than she IS a woman.

Of course.

There are also lots of people who will *not* vote for Hillary
Clinton because she is a woman.

There are also lots of people who will *not* vote for Hillary
Clinton because she is a Clinton.

There are also lots of people who will *not* vote for Hillary
Clinton because she is a Democrat.

And there are also lots of people who will *not* vote for Hillary
Clinton because she is not the best choice for the job.

It's clear she has presidential aspirations for 2008. That's
about the best thing that could happen to the Republicans,
because it will almost guarantee them a victory.

>Forget that her husband was one of the most prolific pathological
> liars in the White House in over 200 years and she helped him.

That's not important, really.

What matters is that, according to her, Bill lied *to her*
repeatedly, yet she kept on believing him when he told new
lies.

Now either she's very gullible, or she is lying to us. Either
way it doesn't say much for her qualifications.

Fool me once, shame on you, fool me twice, shame on me.

> (No
> wonder folks like Lennie Anderson and Brian Burke don't think

That one sank and never popped up again.
>
> But, unfortunatley, people will still vote for her...Again, just
> because she wears a skirt.
>
I think there are far more who will not vote for her, for the reasons
listed above.

The fact is that in every election there are several groups:

1) Those who will vote Republican no matter what
2) Those who will vote Democrat no matter what
3) Those who won't vote, or will vote for a 3rd party candidate
with absolutely no real chance of winning, no matter what
4) Those who are truly independent, and who may vote Democrat,
Republican, 3rd party, or not at all, depending on a wide variety of
factors, and whose votes really can decide an election.

Successful campaigning is all about identifying the 4th group, and
getting them to vote for your candidate.

Tsk. "Ham" radio existed prior to 1920 and the
ratification of the 19th Amendment to the U.S.
Constitution. [hint: women got the right to vote]

The voting age of U.S. citizens was lowered to 18
in 1971 with ratification of the 26th Amendment.

>On the other hand, CB was set up at a time when people were expected
to stay
>in school through high school and people's perceptions changed that
>teenagers were still children rather than people in the early stages
of
>becoming adults.

"CB" (as you morseaholics know it only on the 11
meter band) was created in 1958.

So, teenagers are NOT expected to go to school
nowadays?!?!?

>Of course this is all just speculation but it's fun to think about.

Tsk. Everyone is losing it while having a gay
old time personally attacking one individual in
here. :-)

>>> Perhaps Len wants amateur radio to be more like cb...
>>
>> Perhaps because Len epitomizes CBers...?!?!
>>
>It's impossible to tell from his postings.

Really? ALL because I advocate an elimination of
the morse code test for an amateur radio license?

"Incroyable!" shouted the illegal 6 meter Frenchman.

>It would appear not that he wants it like CB but that he hates amateur
radio and amateur radio
>operators.

Tsk. Are you feeling abused? Not loved because
you do morse code and find out few others care?

Perk yourself up, buy some clothes. I heard there
are some neat things on Ebay. Like long-sleeved
tees with neat little morse code phrases on them.
Better hurry and get your bid in...lots of beefy
morsemen are clamoring for that tee, paying good
bucks to look sexy. :-)

Or, you can form your own HATE group, targeting
evil, wicked, mean and nasty CB! Shout to the
world that they are the Antichrist of Radio,
illegal lawbreakers all who are the spawn of
satan! Write your congresscritter today!

So...ALL who do not like morse code ALL HATE
amateur radio operators? Of course you think so.
You are a morseman (in the gender neutral case,
of course...with morse no one can hear your
orgasmic screams of delight when you get "good
copy").

Join FISTS. Let your love begin! :-)

> More like "chickenshit coward by choice"

You obviously are totally ignorant of the recommendations for safe Internet usage published by government organizations such as www.ftc.gov. The U.S. FTC recommends against giving out personal information anywhere on the Internet or on Usenet, and instead suggests the use of handles or pseudonyms. It also suggests that people go to some lengths to keep their names private even in such formerly-public data bases such as domain name registrar "whois" records. That's why major registrars now offer private registration.

You can live in your daddy's world, but the rest of us are all too familiar with the spammers, identity thieves, stalkers, and scam artists who now make unscrupulous use of Internet information.

Anyone who blindly publishes his or her personal information on the net is more like a clueless victim looking for a place to be mugged.

Go ahead: Keep on being a stupid shit. But don't try to promote your stupidity to the rest of us.

Irrelevant to Jimmy Who, Brian, he lives IN the past.

Indicative of that is writing "...would have forbid"
instead of the usual (proper) way of past tense in
saying "...would have forbade."

Jimmy was THERE, saving the world through ham radio
valiantly fighting all oppressors with his mighty
macho morse key.

1920 was 85 years ago. A few things have changed
in public safety agencies in those 85 years...
except in the romance novels of amateur radio
where Kode is King and it always works through
all emergencies, etc., etc., etc.

If we don't love, honor, cherish, and obey the
mighty macho morsemen, we "HATE" them and "all of
amateur radio," too! :-(

So tell us how the internet is different form the "real world"?

Hams have used their real names for decades, indeed the law requires
it. They also have to identify themselves with their callsign, which
is unique to each ham, and long before computers existed there were
books where you could look up callsigns to get people's addresses.

Every time I've had a letter published in the paper, it's had my name,
and general location. Now admittedly I could be confused with
others with the same name, but I sure don't use a pseudonym, or
for that matter the paper is not likely to print the letter unless
I use my real name (at the very least, they will expect a real
name, and address, at the bottom of the letter, which in some cases
they will not publish).

When I had some small articles published in "73" decades ago, they
included my name and callsign, and my address.

I've posted to the newsgroups for a decade, and I've always used my
real name, and even a completely legitimate email address that isn't
mangled.

In the local newsgroup, I've put in things over the years that deliberately
place me in the real world; no stalkers have appeared at places where
I clearly will be.

Just because some government agency says something does not make it
true.

Absolutely! They KNEW in advance all the glory,
majesty, nobility of amateur radio and its
attendant rank, title, privileges well before
age 14! They were destined for Greatness from
birth and, to this day, demand all love and respect
their royal titles.

All through loving, cherishing, honoring, and
obeying (the league on) morsemanship!

>Kelly has already gone on record as having began his amateur career

The Katapult King is above the law. He is from
Philly where all eat hoagies and fill their autos
with "gaz!" :-)

If we don't love, honor, cherish, and obey the
Mighty Macho Moresemen, we all "HATE" amateur
radio!

Tsk, tsk.

Now is the time that paranoia is encouraged, on an institutional and
especially a personal level.

Especially pernicious is the encouragement of paranoia, coupled with
the "somehow this is your fault" syndrome.

And yet, the real problem isn't posting on netnews. It is companies
such as one in the US, that *willingly* gave out personal information of
thousands and more customers to bogus companies that are doing the
ultimate "phishing".

And I could even possibly accept the anominity aspect of posting, if it
wasn't for the fact that most of the anonymous ones are not exactly the
most civil posters.

How handy.

Hans old man -- there are numerous organizations on the internet that indeed recommend the use of pseudonyms.

Here is a quote from URL:
http://www.privacyrights.org/fs/fs18-cyb.htm

"Be aware of the possible social dangers of being online: harassment, stalking, being "flamed" (emotional verbal attacks), or "spamming" (being sent unsolicited messages). Women can be vulnerable if their e-mail addresses are recognizable as women's names. Consider using gender-neutral e-mail addresses and pseudonyms."

Children are advised to use pseudonyms for obvious reasons.

Use google and look up "use of pseudonyms on the internet"

I remain -- Anon

That's right, "bb". All the guy would have to have done would be to
quickly learn to send and receive morse code and put together or find
some radio equipment and learn to use it--all very straightforward.

You must not be reading much of the material. Jim stated that he obtained his license at thirteen. Would a minimum age of fourteen have prevented his obtaining an amateur radio license at thirteen? You bet.

I obtained my license at age fourteen. How could a minimum age of fourteen have presented a problem?

As long as there's an Extra class, Len is capable of doing just that.
Your only hope is to have that license renamed to something else when
the code requirement is dropped. Then you can keep hounding him.

Just like you are hounded for saying such stupid things like, "Sorry
Hans, MARS >>>IS<<< Amateur Radio."

or "Unlicensed devices play a major role
> in emergency comms" for another) is well used by Leonard H Anderson
and
> Brian P Burke.

Exactly what is wrong with that?

Wow. Do you mean that someone out there might be mean to people? Now
that is scary.

Sounds like the woman who got so worked up she had to go to a hospital
when her neighbors kids left her some cookies one night.

She sued, and won. Good for her. Live in fear. You won't live longer,
but it will sure seem like it.

> Children are advised to use pseudonyms for obvious reasons.

Parents are advised to not allow children on the internet unsupervised.
And any parent that allows instant messaging is getting more on their
computer than they think, fake name or not.

> Not if he had approached amateur radio like Brian Kelly/W3RV did.

You'll likely want to take that issue up with W3RV. Make sure you've
read all the applicable material.

Guess what, "bb", there's likely another piece of information of which you are not aware. There was no age limit for amateur radio licensing when I obtained my license. Despite the efforts of Leonard H. Anderson, the FCC has still not seen fit to impose a minimum age limit.

Good luck on your quest for knowledge.

Actually, the quote is that Len was going for the "Extra right out of the box" right after the regs were modified. Len isn't capable of getting any amateur radio license "right out of the box" now. The box has been opened for a number of years. At the moment, Len isn't interested in obtaining an amateur radio license. Stick around though--that changes from time to time.

***ES!

Maybe they knew something then about your character that warranted
keeping you away from a radio transmitter.

Seems they were pretty dog-gone right to me!

> YOU ****ING BICTHWHORE MOTHER****ERS!!!!!!!!!!!!!!!!!!!!!!!!!!!

I had to leave that one intact.

It's heartbreaking enough to see a Radio Amateur that is obviously
simple minded, obnoxious and foul mouthed, but it's even worse to see
him functionally illiterate AND profane.

What an idiot.

Sure. And when you're out for a drive or walk, go ahead and go
anywhere in town. Ignore the obvious signs of criminal activity and
go right into that rough looking bar to purchase a soft drink.

But you don't do that, do you? You avoid the rough areas of town, or
else make some other kind of adjustment to the dangers. Also, by
avoiding those areas, the people who live there are unlikely to take
notice of you.

> Especially pernicious is the encouragement of paranoia, coupled with
> the "somehow this is your fault" syndrome.

The internet is indeed real life, but it doesn't provide the same
signals to us as do the streets of a large city. Even now as you read
this, a potential burglar is probably scanning your computer for open
ports. That's the equivalent of someone coming over to your house and
testing out all the doors and windows.

And that's one of the big differences between the Internet and your
daily life. People *can* and *do* reach out and touch you with malice
aforethought, and they do it frequently and from all over the world.

> And yet, the real problem isn't posting on netnews. It is companies
> such as one in the US, that *willingly* gave out personal information of
> thousands and more customers to bogus companies that are doing the
> ultimate "phishing".

No, the real problem is ignorance and complaciency. When you deliver
your personal information into the hands of networked servers, you are
reaching a vastly larger audience than was ever before possible.
Thanks to places like groups.google.com, if you slip up even once and
give too much information out, your information is forever maintined
in a searchable data base, and it is there for enemy and criminal alike
to use, even in a future which you cannot yet anticipate.

The net isn't your usual "real life" activity, and if you treat it that
way, you will ultimately pay the price.

The Internet is dangerous enough for the uninformed that people have seriously proposed a licensing scheme - much like a driver's license - in order to keep the untrained user from crashing his vehicle on the information highway.

I think it's probably a good idea which will never be adopted. I'd like to see people be forced to use training wheels (subscribe to AOL or similar) until such time as they passed a written, multiple choice exam on the workings of the Internet. It is the ignorant who propagate email worms by continuing to open attachments, it is the ignorant who fall for phishing scams, and it is the ignorant who still insist that the internet is an okay place to unthinkingly publish personal information.

If it makes you feel like you have hair on your chest to do so, be my guest. To me, it proves that you have hair on your knuckles.

Hi Kim ......No I live about 30 miles S of Pittsburgh ..... just traded in a 626 which was 10 yrs old .....I would have kept the old girl but the transmission was just starting to slip. The only thing I have replaced was a radiator, water pump and 2 CV joints. The water pump was 2 days before I traded. I do also have a Miata which is now 15 yrs old with about 27 K. Knock on wood ..... just oil, gas, tires and 2 batteries so far. I have to get something in my Matrix as I miss my "extended family" on 2 meters. Again good luck with the Tribute.

God Bless and 73 .... Tom KI3R Belle Vernon Pa

Len, come on out and see for youself. Petty good bunch of people even if many are overweight and in t-shirts 1 or 2 sizes too small. Some of the vendors have even figured out that sex appeal even works on hams, and have staffed their boothes with attractive women.

And they do have a testing session. Bring an ID and $12. Oops, forgot, Heil says no more licenses in that box. Wonder if the FCC knows that?

My biggest peeve is how crowded it gets, and the guys with backpacks.
Every time they turn, they knock into someone.

Amen to that. In what you might call "local" elections (city, county, local school board, etc.) the conventional wisdom is that 30% of the voters know you and would vote for you if you were the devil incarnate. 30% of the voters know you and wouldn't vote for you if you were the second coming of Christ.

The other 40% haven't a CLUE and vote based on whose name they heard the most (or the last), whether or not you have a nice smile, or if you go to their church. THOSE are the ducks that you go hunting.

Yes, Toddy, N9OGL is a real stupid guy. No doubt about that Bathrooman! I understand he applied for a BC license 7 times. What a friggin idiot man. I also understand from the great Bathrooman that Toddyboy thought that Metallica had actually filed a lawsuit against a Canadian group for using E and F chords on a guitar. Apparently Toddyboy believed it. What a friggin moron this guy Toddy is. Unbelievable!!! I also understand that he wanted to find out how to make a microwave transmitter out of a discarded microwave oven. Buy, this Toddy is a friggin RETARD!!!!!!!!

Any changes made to amateur radio regulation effect those who are
already licensed.

No Chris, or whoever you are. It doesn't.

Sorry you think I have hair on my knuckles.

And sonnavagun! You prove my point of the anonymous posters and their basic incivility. I doubt that you would call me retarded in a face to face meeting. Yet here you see that as acceptable behavior. Good for you, Chris!

Since you feel comfortable enough to call me a mentally challenged person, I will give my opinion of you.

You are a fine example of the modern person that attempts to that attempts to define their fear of life as a form of superiority. Sad sad, sad.

Embrace it, enjoy it, it fits, eh?

As long as you are happy with that, have at it.

Of course it was okay when this whole thread got started by one of
your knuckle-dragging, non-anonymous brethren who said "More like
"chickenshit coward by choice" about people who are savvy enough to
remain anonymous for general posting. That was K0HB, the epitomy of
the manners that you seem to think go along with non-anonymous posting.

The point is that, anonymous or not, bad manners are not predictable
by the anonymity or lack thereof of the poster. That's just your
prejudice speaking to you.

And sonnavagun! You prove by means of your own posts that prejudice is
your forte. Good for you, Mike!

2687. Near space update - sort of

Newsgroup: rec.radio.amateur.policy

Hello all,

This is sort of an update on the near space ballooning project I was working on.

Despite what we plan on, we are some times steered in other direction by events. A number of these events have occurred in the club I am a member of, and the balloon project has been temporarily slowed by my new position as Chairman of the Pennsylvania QSO party.

The PAQSO party is the largest state QSO party, and will take up a lot of my time. This means the ballooning project will be on the back burner for a year or so.

I'm a bit disappointed that there is a delay, but am plenty excited about the prospects of running the QSO party.

No, it isn't okay. No one should use bad manners. And that is just a minor point anyhow. I was attracted to this thread by statements of how using an anonymous name was going to protect you.

It won't.

> The point is that, anonymous or not, bad manners are not predictable

Not the best example of logic, Chris. I never spoke to the manners of those who would identify themselves. And even that aside, why don't you compare the typical manners of the aggregate of the anonymous posters. A large percent make Steve and Hans look like choirboys.

Which word was beyond your understanding? Everyone else clearly understood my statement about your [lack of] mental ability. There is no ambiguity.

> Getting tired of making stupid assertions in public then getting
> your nose rubbed in it?

I haven't made any stupid assertions.

I have made only one conclusion - and you have failed to provide any evidence (let alone credible evidence) that even hints that my conclusion is wrong. Since there are TWO things being varied, there is a minimum of four states, and thus code cannot be binary (two states). QED, asshole.

She couldn't be worse than what we have. If Hillary is the Democratic
nominee, I'll vote for her rather than more of the same from the
Repooblicans.

Yep, drill for more oil. The Republican answer is that there is always
more. We are in a bad way and few realize it. Believe it; we are at the
mercy of the Middle East oil producers (which is why Bush is now pursuing
Iran and Syria rather than North Korea).

Canada was smart. They wanted nothing to do with the missile defense
system. They know that Bush wants someone else to pay for it LOL.

Meanwhile, back at the ranch, the deficit continues to grow. This is *not*
a conservative agenda.
Conservatives would have had a fit a long time ago with the deficits. This
is an attempt to completely dismantle all social programs, including VA care
(yep, you guys serving in Iraq are going to discover all about the new rules
that get worse every year). Thanks, Repooblicans, for supporting our
troops - *not*. BTW, I am working with a guy who served in Desert Storm
(remember that one?). He has a 10% service connected disability and can get
no VA care. As the only game in town is contract, he has no health care at
all.

The Repooblicans did a real spin on Kerry. And you bought it. They were
going to attack the AARP as a *gay* association! Good lord, if it weren't
for the many Bible-thumping modest double-digit IQ types, the Republicans
couldn't get off the ground. Fortunately, for them, there are a *lot* of
Bible-thumping double-digit IQ types and with the endless funding from big
business - well, you will discover what happens.

Since jobs moved to China, I'm thinking of buying from the company that
bought the IBM personal computer division. The profits might as well go
there as well.

Why does a guy with whom I work have a 10% service connected disability and
cannot get VA care (despite an honorable discharge)? They keep cutting VA
funding.
He has no health insurance. He is working repairing digital cameras, so he
is not totally brain-dead. Unfortunately, only contract work is available

these days and wages are not only stagnating, they are going down.

Canada was smart. They knew the U.S. wanted them in on the missile defense so Canada could pay - and Canadians are *not* stupid, unlike many Americans who buy the Repooblican agenda.

With all due regards from Rochester, NY

Mike,

Might I kindly suggest that it is pointless trying to argue with a modest
double-digit IQ type?

Anonimity died years ago, if not decades ago. Folks use it when they want to flame on the Internet (or go persuing underage girls or boys).

The original comment of "chickenshit coward" was well made, even if a bit harsh ;)

Sigh ...

Hello, Jim

I used to try and look at the candidates, but what the current administration is doing and setting us up for - I will, unfortunately, be voting straight Democrat until things are a bit more balanced.

I know that sounds stupid, but when I found out that a co-worker was in Desert Storm and has a 10% service connected disability ... and can *not* get VA care ...(yep, even with an honorable discharge, you must serve at least 2 years now to be treated for anything other than the service connected disability).

Being a Vietnam veteran and seeing the changes at the VA, I honestly do *not* believe the Republicans support the troops. They wave the flag and make speeches (even visit the troops), but then forget them.

I couldn't believe they were going to attack the AARP as having a "gay" agenda! The big deal is that they have dug a huge monetary pit and don't want to repay the "borrowed" funds from Social Security. You think Hillary Clinton or Martha Stewart are/were crooks?

So, unless the Republicans can come up with a candidate with something on their mind other than big money, I have to vote something else. 3rd party won't cut it as has been proven in the past.

Yup. There is some legitimate argument to the idea that those who would
use their real name are a lot more likely to be on the up and up.

Vs someone who lied about weapons of mass destruction?

You know when there's a problem when politicians talk
about "family values", "school prayer", and similar
distractions instead of the important stuff like the
economy and Iraq. Hiding behind the flag or the Bible
is not a good way to run the country.

Over the last 50 years I've seen no significant change
in the moral or family values in the USA. We've been
"going to hell in a handbasket" for so long we should
have gotten to hell a long time ago.

Dave,

You're missing some basic points about this minimum-age-requirement idea.

First off, there has never been such a requirement in the USA. Not even back before WW1.

Len Anderson, who requested the age requirement of FCC and who has a self-admitted problem with young people being licensed, has been repeatedly asked to provide evidence - any evidence - that there is some sort of problem caused by lack of an age requirement.

He has provided no evidence at all of such problems. Nor has anyone else.

As a diversion, it has been suggested that such an age requirement would not affect most hams today, such as you (K8MN) and Steve (K4YZ). The clear implication is that you shouldn't oppose it because you're over 14, and were at least 14 when you were first licensed.

But there's a clear contradiction in that diversion, because the person demanding the age restriction is way over the age of 14, so it won't affect him, either.

In fact, if we follow the logic of 'it doesn't affect you', it could be argued that since Len Anderson obvioulsy doesn't want an amateur license, he has no real grounds for complaint at all.

His only apparent involvement in amateur radio is spouting off bullshit, nonsense and abuse on usenet, and in general acting like a complete jackass. His sole follower simply performs a variation on his themes. Why bother with them?

Yes, Mr. Anderson did say that he was "going for Extra right out of the box" back on January 19, 2000. But he hasn't taken even the first step towards doing so, and there's no evidence he ever will. So the requirements for an amateur license don't affect him in the least.

There's no good reason for a minimum age requirement for an amateur radio license in the USA. We have more than 90 years of evidence to back that up.

Who is "liberal"? Supporting the troops is liberal? Funny, when you are a reactionary (extreme far right), everyone else appears liberal. I've got my pension coming in (and health and life insurance) - *you* are the one who is going to get the worst end of the results from the current administration. In all honesty, I do hope I'm wrong about where we are headed, but I doubt it.

> Prove they don't.

It was your assertion that they do, Brain. The onus is on YOU to
validate your claim.

Are you finally acknowledging that you were wrong and are unable
to substantiate your assertion?

You ran your mouth off. It was a simple, stupid thing, but you've
now dragged it out for two years now, and you only make yourself look
more and more idiotic by perpetuating it when anyone who's truly
involved in such issues knows you are wrong.

Now...WHAT "unlicensed devices" play a "major role" in "emergency
comms", Brain?

Steve, K4YZ

2717. Brian P Burke Works Hard to Retain "Liar" Status

> >
> Your words, not mine.

And again yet one more Brainism you get ot prove or be labelled
yet a liar again.

Please show the post wherein I said "...the Nazi party has told no
lies".

No innuendo, Brain...No "well, that's what I thought it sounded
like..."

Real, Honest-to-God truth this time, Brain...Not wordsmithed
dodges like Lennie prefers.

Can you handle it?

> > > Robeson's lies are stacking up like cordwood. Too bad all those

>
> All bullying from the foul keyboard of Steven Robeson/K4YZ/K4CAP.

What bullying, Brain?

What "foul"...?!?!

Proof, Brain...Where did I make those alleged threats? Show them.
Prove them.

> Then there's the stupid stuff, like "Sorry Hans, MARS >>>IS<<<
Amateur
> Radio." Hi!
>
> Hi, hi! I still get a kick out of that awesome absurdity every time
I
> see it.

The only "absurdity" is your out-of-context requoting in order to
try and find some way to redirect attention away from your legendary
mistruths and blatant lies, Brian.

> > And I think yoiu meant "palpable", Brian...But then we ARE
used
> to
> > you trying to use nursing terminology only to get it wrong.
>

again
> get an Extra license from that box.

Oh, the box is still open, alright, and there are plenty of
"Extra's" to go around...Even for you and Scummy.

But I suggest you get busy and upgrade.

The FCC has been making a big issue on maintenence of licensure
based upon "character" issues, Brain.

Since it's very apparent that you have a very hard time being
truthful, you may not only NOT be allowed to upgrade, but may have to
defend your continued licensure at ANY level.

Think about THAT for a moment when you start making yet more
unfounded allegations and deceptions.

Do not make the mistake of thinking that you are anonymous!

The only way to be anonymous on the internet is to not use the internet.

But I guess I wouldn't know about such things. Believe me or do not
believe me. It doesn't matter to me.

But I am not the one with the probelm, Dieter!

You've led a years long campaign to smear a man who does nothing
but good things for Amateur Radio then claim others have "mental
ability" problems.

> > Getting tired of making stupid assertions in public then
getting
> > your nose rubbed in it?
>
> I haven't made any stupid assertions.

Sure you have.

At least three years of smears, deceit and blatant lies about Bill Paternak and Amateur Radio Newsline,

> I have made only one conclusion - and you have failed to provide any evidence
> (let alone credible evidence) that even hints that my conclusion is wrong.
> Since there are TWO things being varied, there is a minimum of four states, and
> thus code cannot be binary (two states). QED, asshole.

You seem to have the mental problems, Dieter.

I wasn't addressing the binary states (or lack of) of accurately sent Morse Code.

I was addressing your Quixotie-like crusade style.

As for who's the...well...You know...I guess it's the person who can't express himself without profanity.

QED, Dieter.

You're a putz.

Steve, K4YZ

Correct.

> Len Anderson, who requested the age requirement of FCC and who has
> a self-admitted problem with young people being licensed, has been
> repeatedly asked to provide evidence - any evidence - that there
> is some sort of problem caused by lack of an age requirement.

Len has never come up with any proof for his assertion of ARRL
dishonesty either.

> He has provided no evidence at all of such problems. Nor has anyone
> else.

That'd likely be because there is no such evidence in existence.

> As a diversion, it has been suggested that such an age requirement
> would not affect most hams today, such as you (K8MN) and Steve (K4YZ).
> The clear implication is that you shouldn't oppose it because you're
> over 14, and were at least 14 when you were first licensed.

It remains that it has not been demonstrated that such a rule change would be a positive thing.

> In fact, if we follow the logic of 'it doesn't affect you', it could be
> argued that since Len Anderson obvioulsy doesn't want
> an amateur license, he has no real grounds for complaint at all.

To be completely fair to Len, he does not desire an amateur radio license at this time. He changes his view from time to time on whether he desires an amateur radio license.

> His only apparent involvement in amateur radio is spouting off
> bullshit, nonsense and abuse on usenet, and in general acting like a
> complete jackass. His sole follower simply performs a variation on his
> themes. Why bother with them?

Len believes that by commenting to the FCC in regard to amateur radio regulations and by doing whatever it is that he does here, he is somehow participating in amateur radio itself.

> Yes, Mr. Anderson did say that he was "going for Extra right out of the
> box" back on January 19, 2000. But he hasn't taken even the first step
> towards doing so, and there's no evidence he ever will. So the
> requirements for an amateur license don't affect him in the least.

Precisely what I've told him over the years. He is uninvolved in amateur radio. He is a non-participant in amateur radio. He is irrelevant to amateur radio. He has no experience in amateur radio.

> There's no good reason for a minimum age requirement for an amateur
> radio license in the USA. We have more than 90 years of evidence to
> back that up.

You'd think that if a problem existed, it would have manifested itself by now.

Go ahead. I announced it so you could have your chance. Just an
announcement if anyone was interested. If I was backing off the project,
I probably would have just kept my yap shut until someone asked. YIMV.

There are only so many people to do things, and with the need arising in the QSO party, which is of the "show must go on" sort of nature, the path was pretty clear. It will be as much work as the balloon project.

Liberals are anyone who disagrees wit' ya. The AARP was a fine
organization when it was helping to get the GOP prescription plan
passed. Now that the AARP does not support the proposed changes to
Social Security, they are left leaning, partial abortion supporting,
socialistic, Leeburals!

Simple, eh?

And fer Rabbi Phil:

Conservatives (actually neoconservatives) are at their funniest when
they are *in* power.

Golly gee batman.....tell me how to slow the growth of the debt when we are fighting a flippin WAR? Moron.

> Conservatives would have had a fit a long time ago with the deficits.
> This
> is an attempt to completely dismantle all social programs, including VA
> care\

Oh BS. Bush has approved and continued more so called welfare programs than ANY other Republican President. If anything he tends to be too LIBERAL on social programs.

> (yep, you guys serving in Iraq are going to discover all about the new
> rules
> that get worse every year). Thanks, Repooblicans, for supporting our
> troops - *not*.

What SPECIFICALLY are you refering to? You mean how the VA Budget was increased over the last fiscal year? And how the VA ITSELF raised everyones pay and ATE the increases all up?

What now brown cow?

BTW, I am working with a guy who served in Desert Storm
> (remember that one?). He has a 10% service connected disability and can
> get
> no VA care.

Of course not. Ten percent is sore butt stuff, pain in next stuff. Maybe a flinch in the cheek stuff. Go talk to someone that has a 100 percent combat disability and see if he gets care. No sweat GI, walk in and you go to the head of the line. Perhaps if your friend actually had a problem he could get treated. Ten percent....what a flippin joke.

The VA has to make priorities. There is NO WAY they can treat them all, especially those NOT COMBAT related. But me boy....anyone with a real need and proper credentials can and does get VA care.

As the only game in town is contract, he has no health care at

The AARP is a SELF ADMITED liberal organization.

Of which I am a member. A non supportive member at this point on the
subject they support. But I believe one needs to be INSIDE to affect any
sort of change.

Which is why I still maintain my ARRL membership.

2731. SERIOUS MONEY OPPORTUNITY-$5 INVESTMENT-HIGH RESPONSE RATE-QUICK RETURNS

Newsgroup: rec.radio.amateur.policy
Date: 2005-03-14 21:34:09 UTC
From: feedbackzz@yahoo.com
Message-ID: <1110836049.744955.269800@l41g2000cwc.googlegroups.com>
Source record: 104247

Follow the directions below and you could
have $5000 in your PayPal account in 2 weeks.
There is a very high response rate in this
program because of its low investment, high
yields, and quick return. If you are a skeptic
and doubt that the program will work, I urge
you to give it a try anyway! It REALLY WORKS-
that is why so many thousands are involved in
programs like it. Don't miss this chance.

If you achieve only moderate success, your
PayPal account will still have several hundred
dollars in it within the next couple weeks.
If you actively promote the program, you could
soon have $8,000 in your PayPal account.

SIMPLE: All you need is $5 and a free PayPal
account. Pay $5 to one person.

SECURE: PayPal (BBB member) handles all
transactions. No one sees your bank or credit
card information.

LEGAL: See Title 18, Section 1302 and 1341,
US Postal and Lottery Laws.
The details of this business make it legitimate.
You are using the Internet to advertise your
business opportunity. You have a mail order
business that collects email addresses from
people interested in home-based online business.
You provide a service-mailing list membership-
in return for a small fee. Treat your mailing
list as a business. Keep accurate records,
declare your income, and pay income tax on it.

INSTRUCTIONS

STEP 1: COPY and PASTE this letter onto a
blank notepad file. SAVE as a TEXT FILE.
Keep it for the next time you need the
program.

STEP 2: Get a free PayPal account
(5 minutes setup time) at www.paypal.com.
Register for a PREMIER account (not a

PERSONAL) so that others can send money
to your account.

STEP 3: Using your PayPal account, send $5
(US DOLLARS) to the email address (PayPal
account) in position #1 of the list below.
PayPal will ask for a payment type-select
SERVICE. In the SUBJECT area, enter
"Please add me to your mailing list"
(this is very important). If you prefer
that your email address not be given to
other mailing list businesses, enter
"Please add me ONLY to your mailing list"
in the SUBJECT area. In order to send
money, you can deposit $5 into your PayPal
account with your own credit card, use
your bank account, or register for the
PayPal credit card.

IMPORTANT: IN ORDER FOR YOUR BUSINESS
TO WORK, YOU MUST BE HONEST AND SEND $5.
The mailing list business remains successful
due to the honesty and integrity of those
involved. $5 is a very small investment,
especially when you are about to receive
many times that much! If we are all honest,
we will all make money.

STEP 4: After you send your $5, remove the
address from position #1 of the list below.
Put the address in position #2 into position
#1. Put your own email address (PayPal
account) in position #2. Some engines will
automatically hide part of an email address
when the letter is posted in a newsgroup.
It may look like this:
yournam...@wherever.com

To avoid this complication, enter your
email address using 2 separate lines,
like this:

2) yourname (press ENTER on your keypad)
@wherever.com

(If you ever encounter the dots, click on
SHOW OPTIONS at the top of the letter, then
click on REPLY. Scroll down through the
original letter to find the full addresses.)

Both people on your list have already bought
mailing list memberships for $5! The program

is working! Note: If you put your name in position #1, you will not receive money from the hundreds that other members find.

CURRENT PAYPAL ACCOUNTS:

1) cwhatton22
@charter.net

2) feedbackzz
@yahoo.com

STEP 5: COPY and PASTE this letter (with your address in position #2) in emails to at least 60 newsgroups, chat sites, discussions, message boards, etc. It takes less than a minute to post the letter. The more you post, the more money you can make. People will see the letter heading as they scroll through the list of postings in a particular group. PASTE the heading below into the subject area of your email (you can also write your own heading):

SERIOUS MONEY OPPORTUNITY-
$5 INVESTMENT-HIGH RESPONSE RATE-
QUICK RETURNS

Use the search engines (Internet Explorer, yahoo.com, google.com, altavista.com, excite.com) to find sites. Search for moneymaking forums, moneymaking message board, money chat, employment message board, business message board, business discussions, etc. You can create your own free webpage (try webspawner.com, cmlb.net), then post links to your site. Try posting a notice on community and college bulletin boards to direct people to your webpage.

THIS BUSINESS WORKS

When your name reaches position #1 (usually in less than a week) it will be your turn to receive $5 deposits. If you personally find 20 interested people, and they each find 20, you make $2000. If you find 40 people, and they each find 20, you make $4000. Remember that the response rate is very high. Since there are only 2 names on the list, you can expect 80% of your profits within 2 weeks.

Participants who actively promote their mailing
list average between $5,000 and $8,000 and
receive the funds within 3 weeks.

Relieve your financial stress NOW!
Become a part of the mail order business and
help people to help people.
This program is about helping each other!

Mentally 14, I'm sure... :-)

Nobody, repeat NOBODY can "drag" big badass dave "in"
to anything. He said as much in the past. He IS the
Lawgiver despite Congress not approving him for that.

Big badass dave is very territorial, very old-style.
All who are allowed to play on HF or below MUST be
federally code-tested. "Or else." NO challenges,
let alone changes are "allowed" on that. :-)

And prior to the Morse Exam requirement, there had been no Morse Exam
requirement.

Jim, you've just got to realize that there are "firsts" for many things
in life.

> Len Anderson, who requested the age requirement of FCC and who has
> a self-admitted problem with young people being licensed, has been
> repeatedly asked to provide evidence - any evidence - that there
> is some sort of problem caused by lack of an age requirement.

Len has a self-admitted problem with the arbitrary licensing
requirements that are in-play today, some of which you support. That
he would suggest yet another one may only be a strawman. Something to
jar your noggin into doing what it was designed to do.

> He has provided no evidence at all of such problems. Nor has anyone
> else.

Welp, there was the unlicensed Kelly...

> As a diversion, it has been suggested that such an age requirement
> would not affect most hams today, such as you (K8MN) and Steve

(K4YZ).
> The clear implication is that you shouldn't oppose it because you're
> over 14, and were at least 14 when you were first licensed.

Len has been reminded again and again and again not to pay any
attention to things which don't concern him. So if you are not
affected by Len's suggested age requirement, perhaps you should take
your own advice and not be concerned.

> But there's a clear contradiction in that diversion, because the
person
> demanding the age restriction is way over the age of 14, so it won't
> affect him, either.

Ah, you caught my one and only flaw. You da man.

> In fact, if we follow the logic of 'it doesn't affect you', it could
be
> argued that since Len Anderson obvioulsy doesn't want
> an amateur license, he has no real grounds for complaint at all.

He isn't complaining. He is petitioning his government for change
which is a protected right in America. I think.

> His only apparent involvement in amateur radio is spouting off
> {EXPLETIVE DELETED}, nonsense and abuse on usenet, and in general
acting like a
> complete {EXPLETIVE DELETED}. His sole follower simply performs a
variation on his
> themes. Why bother with them?

Lions and tigers and bears. Oh, my!

Reverend Jim must leave the Antenna Mount at once. Say pennance or be
defrocked.

> Yes, Mr. Anderson did say that he was "going for Extra right out of
the
> box" back on January 19, 2000. But he hasn't taken even the first
step
> towards doing so, and there's no evidence he ever will.

Is there a time limit on getting an amateur license, or is it
self-paced?

So the
> requirements for an amateur license don't affect him in the least.

Hey. Mr Bean;
So amateur radio to the rescue. Eh?
But pray tell; there must be some reasoning to that decision.
Is it possible that everyone rushes to the nearest phone and ......
"Hey mum there's fire somewhere down your way. Call me back when you find
out who it is! OK?"
Or why ..... ?
Interesting! Your comment would be welcome.

Yeah, so I've heard Dan. But the point I am trying to get out is that it was just fine for them to help with the Prescription plan, but once they disagreed, the attack dogs came out. No loyalty, no sense of working together because something is right. Just blind adherence to the party

line. And heaven help you if you disagree.

If the social sec issue is a good one, it should stand or fall on its own merits, not whether or not our membership in the AARP is somehow a litmus test that we support gay marriage!!

That is certainly a more accurate way of saying it.

However, please note that at no time has Len's desire for
an amateur radio license reached the point where he
actually obtained one. So it cannot be much of a desire
even at its greatest.

Yep. But it hasn't. And as previously mentioned, the cb
service had such a rule, but it was not effective in
keeping that service well-behaved and law-abiding.

Buck: Interesting; thanks for the info.
Hadn't heard of that feature/service before! Sounds like a good idea for critical zones. But imagine just 'driving by' a hospital/medical facility and the cell phone shuts off! :-)
Recently I was walking through a hospital to visit daughter who had just come from an operation, when my pocketed cell phone rang. I had forgotten to turn it off when entering the hospital as required; did so without answering it.
What has worried me a few times is to see someone weaving down the road and then driving alongside observe them engaged in an animated cell phone conversation! Love to have a 'jammer' on those few occasions.
Regulation now, in this jurisdiction, is that one is supposed to at least use a headset, to phone while driving. Not that that IMHO is the whole answer! The idea being that you keep your hands on the controls and your head is not canted over holding the cell phone against ones shoulder. Some statistics indicate, although it's too soon to tell, that accidents involving cell phone use are 'somewhat' reduced. That makes sense because despite the increased awareness the regulation is broken more often than observed, due to lax enforcement.
Its amazing how well cell phones work; even inside steel framed and metal clad buildings. It's not uncommon to see husband inside s.market/Wal-mart/COSTCO etc. phone in hand asking wifey "What size/brand/how much of ... is it that you want etc.".
And now cell phones even take pictures! "Did I show you my new tattoo ..... ". I'm afraid we've become a society of push-buttoners. On one occasion, here, a cell phone rang during a funeral; and the owner answered it! Now there's a good use for a jammer. Attach it to the casket and keep it switched on until the memorial service is over!
Thanks to all for the info in this thread.

> 73 de Jim, N2EY

Not quite that simple. I would agree with all of the above
where both parties present a candidate that is "reasonable"
across a broad brush of party faithfuls. Where things go wrong
is when a candidate goes beyond the point of reasonableness
on one or more issues as judged by others in the party.

Yes, there are many people who "appear" to be in groups
1 or 2, but piss any of them off and they too will jump ship and
either not vote at all (many people vote put don't vote
for all possible positions on a ballot), they'll vote for
a 3rd party...or write-in Mickey Mouse... or they'll
vote for the other party's candidate as many Dems did by
voting for Reagan in 80 and 84.

One other variable on a 4 year basis. From one presidential
election to the next, there is a considerable loss of existing voters
who have died and an influx of "new" voters who have reached
18 years of age, become naturalized citizens or just finally
registered to vote for the first time. Far more people today
as new voters tend to view themselves as "independents"
rather than being staunch democrats or republicans.

Cheers,
Bill

Robert wouldn't that be OK? Much the same, say, as discussing something first hand with someone right at your elbow while waiting in line. Could be good use of your time and one more chore taken care of?
Seems more like it's 'inappropriate and cell phone use that disturbs others or disrupts the purpose of whatever is going on in that venue, that is being criticised here?
Of course there are always people who like to show off how important they are (or not) to talk loudly about their business or just have no consideration or manners anyway. They, like the poor, will always be with us; just feel sorry for their uncouthness!
I vividly recall a woman, with a so called 'Upper class British accent' telling a whole train carriage load of people, via the use of her cell phone "Yes darling; we are on this quaint little train and ..... please will you get a car to pick us up at ..... ". Translation; "I'm used to much better things than all this and the people here are beneath me in social station etc. etc. ".
Radio amateurs are not like that. Unfailingly polite and considerate, on the phone, on the air, anywhere. It's requirement of the hobby, is it not? :-)

Jim, you're unlikely to be able to reason out how an arbitrary licensing requirement will manifest itself. That is the beauty of arbitrary requirements.

Yet the best chairman that the agency had was Dick Wiley, who was there in the mid-1970s. Although he was and still is a top-notch communications lawyer, he had a very good engineering advisor and he listened to what the latter told him. He sat in on a seminar that I was co-chairing on TV technical standards, and from the few questions that he raised we could all see that he was understanding a lot of what we were discussing.

Unfortunately, his Carter=era successor (Charlie Ferris, who was Tip O'Neill's bag carrier) brought in the economists and "policy" types, downplayed the engineers, and the succeeding chairmen were even worse.

And Perot made a remarkably strong showing for a 3rd Party candidate. If I remember correctly, it's the strongest one in my lifetime and was more far above the number actually needed to tip the win away from the Republicans.

The FCC

FROM N9OGL'S BLOG

http://n9oglvoice.blogspot.com/

The Federal Communication Commission (FCC) are slime, no they are below slime. As most of aware I have been fighting a long battle against the FCC over the licensing system. This battle began in the 1997, 1998 when I applied six time for a Low Power TV license for a community which has no local television service. The FCC dismissed the application and waivers because they weren't filed during the filing window(although the courts had ruled that the FCC must consider waivers and waivers can be filed at anytime). As I stated to John Shimkus (who's on the House Sub Committee on Telecommunication) why should I or anyone else continue to apply for a license if the FCC won't consider an application or waiver. It is in fact a waste of time and MONEY to continue to try to get a license, and the ones who hurt the most is the community. Here in central Illinois there are not that many TV stations, so there is a number of television frequency available. So by not consider my application and waiver the FCC hurt the public interest because the community of Taylorville still has no local TV service. So after applying six times I decide to go on the air without a license because it was a waste of time to apply. In 1999 my group applied for a low power FM license and again the FCC and Congress FUCKED me, my group and the community out of a valuable resource. Now, I'm going to enlighten the ham community with my knowledge and I'm not going to let some licensed CB operator screw me out of that....So let the fight begin!

Todd N9OGL

>requirements that are in-play today, some of which you support. That
>he would suggest yet another one may only be a strawman. Something to

>jar your noggin into doing what it was designed to do.

Tsk, it must be such HARD work, making that molehill
into a mountain!

Poor Jimmie can't understand what I wrote on my 14-page
Comment on 98-143 that was filed on 13 January 1999...
EXCEPT a minor item on the last page of that. Perhaps
he skips the major content of daily newspapers and
concentrates on the funnies at the end of the paper?

>> He has provided no evidence at all of such problems. Nor has anyone
>> else.
>
>Welp, there was the unlicensed Kelly...

So...rumors MUST be true...Jimmie is preparing a writ
for the Supreme Court on this TERRIBLE, TREASONOUS
subject of AGE requirements!

>Len has been reminded again and again and again not to pay any
>attention to things which don't concern him. So if you are not
>affected by Len's suggested age requirement, perhaps you should take
>your own advice and not be concerned.

Brian, Jimmie IS the Spanish Inquisition! :-)

All who do not think as HE does shall be burned at
the stake!

All who do not agree with HIM are the Antichrist!

>> In fact, if we follow the logic of 'it doesn't affect you', it could
be
>> argued that since Len Anderson obvioulsy doesn't want
>> an amateur license, he has no real grounds for complaint at all.
>
>He isn't complaining. He is petitioning his government for change
>which is a protected right in America. I think.

Brian, that is NOT allowed in U.S. amateur radio!

PCTA extras ARE the inquisitors.

Inquisitors deny ALL rights given to U.S. citizens
if any disagree with their holinesses.

>Reverend Jim must leave the Antenna Mount at once. Say pennance or be

>defrocked.

Now, now, Jimmie wanted that "cool" WOMAN's morse code tee.

A frock would go very well with that outfit.

>> Yes, Mr. Anderson did say that he was "going for Extra right out of
the
>> box" back on January 19, 2000. But he hasn't taken even the first
step
>> towards doing so, and there's no evidence he ever will.

>Is there a time limit on getting an amateur license, or is it
>self-paced?

Whatever an Inquisitor demands now MUST be obeyed!

Jimmie is tuned to the wrong mind with his telepathy
machine. As usual. He really doesn't KNOW much about
others or their motivations...but damn if anyone can
point that out to him!

Tsk, Jimmie is sure working hard making that molehill
into a mountain! A casual statement made in here over
FIVE YEARS AGO is made to sound like some priestly VOWS
taken for life!!!

I wonder what Vows Jimmie took at the nave of the Church
of St. Hiram (prostrate on the floor, making the Sign of
the J-38)? Did he HOLD those Vows until now?

Tsk, if he be defrocked then he NEEDS all that women's
wear from Ebay! We can't have him running around naked
in front of high-voltage tube equipment...his shortcomings
might get a spark! Tsk!

>So the requirements for an amateur license don't affect him in the
least.

>Perhaps they really do affect Len. Perhaps they affect every American

>whether they're aware of it or not. Ever think of that?

Americans do NOT get any Rights guaranteed under the
U.S. Constitution when it comes to amateur radio. The
gods of ham radio are the Lawgivers and none may fault
them. They RULE there!

>Welp, Jim. You sound like you've had your fair share of sour grapes
>today. Take the rest of the day off.

Tsk. I'd say those sour grapes were fermented as well.
Jimmie ought to sleep it off lest he have another angry
hangover.

Quite true, Brian, but that is NOT what this thread
is about. :-)

Tsk, tsk...Jimmie Miccolis can't bear it when his noble
league-speak isn't accepted as Ultimate Truth in ham radio
so he tries to manufacture an ISSUE based on attempts to
denigrate an NCTA in here. We may have to call him
"Misdirection Miccolis," privately, of course since he is
a lofty, noble, royal amateur extra.

>> I didn't ask for proof. Just evidence. Len has not provided
>> *any* evidence in either case.

>So people now have to have evidence for why they want an arbitrary
>licensing requirement?

Absolutely, Brian! Tsk, some of these PCTAs want to take
code test elimination to the highest courts in the land! :-)

Never mind that my source of information (and cute picture)
of those two "youngest hams in the world" at 6 years old was
the ARRL News, on their website. Jimmie wanna say I "lie."

Jimmie is of the opinion that ANY toddler (with a ham
license) ALWAYS behaves and could never, ever do anything
wrong on the air. Neither do such toddlers EVER cause
trouble on a playground or with their parents in super-
markets, etc., etc., etc.

Of course, if such code-tested kids grow up to be extras
then they will be beyond reproach! PCTA extras can never
ever be charged with ANY impropriety!

>> > > He has provided no evidence at all of such problems.
>> > > Nor has anyone else.

>> > That'd likely be because there is no such evidence in existence.

>> Yep.

>Oh, my!

Tsk, tsk. The league continues to Sin by Omission on
much of its "news." Such "evidence" is glaringly in
view by comparing REAL news sources output about an
event also "reported" by the league.

The league is the league and beyond reproach. None may
gainsay a thing nasty about them. The league is holy.

>> It's quite clear that it would be a negative thing.

>Proof? Evidence?

Jimmie needs NO "proof." He points to ham radio as it is
and says "It ain't broke, don't fix it!"

There we have it.

Absolute.

Jimmie is one of the Lawgivers.

>> > > In fact, if we follow the logic of 'it doesn't affect

>> an amateur radio license reached the point where he
>> actually obtained one. So it cannot be much of a desire
>> even at its greatest.

>Perhaps the desire to implement an arbitrary licensing requirement on
>the American amateur radio community is stronger?

Careful, Brian, you are making negative criticsm on one
of the Lawgivers, a god of radio.

By their virtue of being PCTA extras, gods of radio like
Jimmie KNOW EVERYTHING and what they KNOW is the TRUTH.

Look in other threads in this newsgroup. Jimmie KNOWS
about things having NOTHING to do with amateur radio
and doesn't hesitate to tell the world he is "right."

Never mind that Jimmie has NEVER been IN government or
in national party politics, he KNOWS it all without EVER
being IN government nor expressing any desire to be IN
government or national politics.

Tsk, tsk, tsk...I've never claimed to be IN amateur radio
since I began advocating the elimination of the morse code
test. [over two decades ago, by the way]

>> > > His only apparent involvement in amateur radio is spouting off

>> > regulations and by doing whatever it is that he does
>> > here, he is somehow
>> > participating in amateur radio itself.

>> Just a matter of semantics.

>I'm sure Chairman Powell never gave it much thought.

Tsk, tsk, tsk. Whover big badass dave and Jimmie
are mind-reading, it sure isn't me. :-)

It would seem that Jimmie's only apparent involvement
in government and politics is spouting off bullshit,
nonsense and abuse on usenet, and in general acting like
a complete jackass.

Jimmie has NO government office position nor does he have
ANY "in" with national party politics, has never ever
served in the United States military, has never ever
been IN the aerospace business...yet he KNOWS all about
that and doesn't hesitate to claim "authority" and a
noble, even royal judgemental capability on all who dare
speak against his NON-ham-radio opinions!

>> > > There's no good reason for a minimum age requirement

>> keeping that service well-behaved and law-abiding.

>Jim, you're unlikely to be able to reason out how an arbitrary
>licensing requirement will manifest itself. That is the beauty of
>arbitrary requirements.

Brian, he just CANNOT change his mind.

Further, Jimmie is a Lawgiver and KNOWS what is "right"
and what is "wrong."

Anyone who says the least thing negative about what
Jimmie considers "right" is thus automatically "wrong."

It's as simple as that. :-)

But, we can't disturb this god of radio right now. He
is very busy manufacturing a mountain out of a molehill
right now. He wants to make an "example" of something

I wrote to the FCC over six years ago, possibly preparing
a writ for submission to the Supreme Court or something...

What a waste of time he be.

>

ONe example of this was AM stereo. Instead of picking one of
5 or so proposed systems as the standard, they said "let the
marketplace decide". With 5 possible selections, the net result
was that AM stereo was stillborn.

When stereo sound for TV was proposed, the EIA (electronics
industry association) got together and hammered out just
one proposal to submit to the FCC. And the FCC said
"okay, you can do it". The EIA did essentially what
the FCC should have done, but with the AM stereo disaster,
the EIA knew that the only way the FCC couldn't screw it
up was to present only one proposal. SO that's what was done.

Speaking of mountains out of molehills, your comments beg the question as to why YOU have spent almost 10 of your remaining few years antagonizing a USENET group for which you obviously have no practical use.

> He wants to make an "example" of something
> I wrote to the FCC over six years ago, possibly preparing
> a writ for submission to the Supreme Court or something...

Veeeeeeeeeeeeeeeeeeeety interesting!

Lennie fusses about getting smacked around for comments that he made to the FCC commissioners 6 years ago, yet HIS favorite thing to do is smack ME around for comments I made six years ago...

Seems it's NOT OK to chastise HIM for exercising the same rights he demands for himself...

> What a waste of time he be.

You said it brother...What a waste of time be you.

> LenAnderson@ieee.org

Putz and liar. Does the IEEE proud, no doubt.

It's been pointed out to you that the FCC maintains certain
"character" requirements for licensure. They are (obviously) not as
strict for Amateur Radio since you remain a Commission licensee.

The following quotes from your "blog" is pretty explanatory as to
why they do that:

> The FCC dismissed the application and
> waivers because they weren't filed during the filing window(although
> the courts had ruled that the FCC must consider waivers and waivers
can
> be filed at anytime). As I stated to John Shimkus (who's on the House

You obviously missed the "Idiot Exclusionary Rule".

You met THAT criteria.

> It is in fact a waste of time and MONEY to
> continue to try to get a license, and the ones who hurt the most is
the
> community.

Maybe you haven't quite gotten the picture yet, Todd. YOU haven't
proven to the FCC that you can meet the standards of being a
licensee...ESPECIALLY in the broadcast services.

> Here in central Illinois there are not that many TV
> stations, so there is a number of television frequency available. So
by
> not consider my application and waiver the FCC hurt the public
interest
> because the community of Taylorville still has no local TV service.

Uhhhhhhhhhhhh...??? Because you'e an incometent idiot who hasn't
met the criteria for licensure?

> So after applying six times I decide to go on the air without a
license
> because it was a waste of time to apply.

And you wonder why the FCC wouldn't give you a broadcast license?

You're violating the regulations of the one radio service you ARE
a licensee in...WHY in Heaven's name would they waste valuable
COMMERCIAL spectrum on an idiot who can't adhere to AMATEUR
regulations...???

> In 1999 my group applied for a
> low power FM license and again the FCC and Congress ****ED me, my
group
> and the community out of a valuable resource.

A "valuable resource" to whom?

And the FCC and Congress didn't **** you out of anything, Todd.

You didn't qualify to be an FCC licensee for the service you were
requesting then...You don't qualify now.

> Now, I'm going to
> enlighten the ham community with my knowledge and I'm not going to
let
> some licensed CB operator screw me out of that....So let the fight
> begin!

What fight?

You're making a fool out of yourself. (It appears it's an
on-going proceess)

You're going to try and beat the FCC at a game wherein they
already have DECADES of case law in thier favor, not to mention a bank
of lawyers who will still be earning federal wages long after this
episode is over with and you're flipping burgers to pay off the
bankruptcy.

"Fantasy believers"...?!?!

This isn't a "Star Trek" or "Stargate SG1" Convention, Lennie.

It's attended by real people with real licenses and real radio
stations.

The one "fantasizing" is the ex-radio technician who is waiting
for the FCC to beg him to take an exam-free Amateur Radio license for
all the projects he "had his hands in" ove the years.

> If I want to see attractive women outside of my
> house environs...(SNIP)...(There's one within...?!?!)

> (UNSNIP)...Los Angeles with all its movie

And the number one position of wannabe actress suicides.

And the number one position of murders.

And the number one position of natural disasters in CONUS.

And the number one position of gang-related felonies.

And the number one position of drug related crimes.

> >And they do have a testing session. Bring an ID and $12. Oops,

> >knows that?
>
> Big badass dave IS the Lawgiver. Whatever he say,
> all DO. Period. No questions allowed.

Lennie can save his $12. Spending it at Dayton would be on the presumption that he could pass the test. Might as well save his money since he can't do it. Requires a certain amount of requisite knowledge, and Lennie's demonstrated a pretty weak comprehension of Amateur Radio practice here. If he can't get it right in an "open book" enviroment, he'll never get it right at the VE session.

> LenAnderson@ieee.org

Character quifications had nothing to do with it GI JOE. The FCC Low Power TV division in the Mass Media Bureau wasn't posting the filing windows like their suppose to, that's what it comes down to. I suggest you and your buddies on here stick with ham radio. At any rate the FCC may consider waivers at anytime and courts have gone farther to say "the FCC MUST consider waivers" regardless if they are in a filing window or not. again I suggest you and your buddies stick with ham radio.

So What? are you saying people mentally handicap can't or shouldn't
give a license, because if the FCC IS doing that it is a violation of
ADA (American Disabilities Act)and I'll be sure to past that on to the
Telecommunications Sub Committee. I'll be the first one to file a
lawsuit against the FCC.

Who's "GI Joe"...???

And yes, character is very much a part of FCC licensure,
especially in the broadcast services.

> The FCC Low

Toddie, Toddie, Toddie...

You try to toggle "incompetence" with "handicap". They are NOT
the same.

Steven Hawking, for example, has one of the most severe physical handicaps ever known to man, but he is eminently competent in all other respects.

You, on the otherhand, have all of the physical facilities a "normal" human being enjoys, however cannot understand even simple regulatory process or express yourself "effectively" without liberal use of profanity and insult.

E V E R Y rule, regulation and statute of law at every level requires that a person be "competent" in order to be a functioning citizen.

Incompetence IS a legally defensible EXCLUSION from cerain rights and priviledges of citizenship, INCLUDING licensure by the Federal Communications Commission.

Since you've apparently admitted that you ARE incompetent, Todd, perhaps we should make sure that a copy of this exchange makes it to any public hearing wherein your application for a broadcast license is subject.

And we can include a copy of your "The FCC is Slime" diatribe from your "blog". It would certainly lend credence to the argument that you would be an enforcement risk if a broadcast license were issued to you.

You certainly take liberties with Amateur regulations. What makes anyone believe you'll comply with commercial ones?

> > You're violating the regulations of the one radio service you

> 1991-1992 and have not once gotten a fine or a warning letter.

I go 70MPH on the freeway in places where it's marked 65MPH and never gotten a speeding ticket.

So what?

>In my
> opinion G.I. JOE you don't know what the #### your talking about.

(1) Who is "GI Joe"...???

(2) P L E A S E don't tell me this vaunted college you're about to graduate from is bestowing a degree in English upon you, Todd, because your comprehension, construction and application suck.

You're a prime example of why this nation is in dire straits...Our schools, primary, secondary and post graduate, are failing.

I'd be humiliated to be a member of the Board of the institution
about to bestow ANY level degree upon a person who can't express
themselves more effectively than what you've demonstrated here.

> > You're going to try and beat the FCC at a game wherein they

> > episode is over with and you're flipping burgers to pay off the
> > bankruptcy.
>
> I have a little bit more money and power then what you think G.I.
JOE,
> So keep lying to yourself.

Who's "G.I. Joe"...???

And you obviously have squat for "power" since you have to resort
to broadcasting via Amateur Radio rather than with the appropriate
commercial licnese, Todd.

As for money...well...if you had spent your (imaginary) funds on a
decent communication's lawyer, you would, in all likelyhood, already
have the broadcast license you so passionately covet.

Instead, you resort to a pontificating, self-promoting "blog" that
is verbally abusive, insulting, and absolutely innefective and useless
for obtaining said licensure. It is, in fact, counter productive to
it.

The only person lying to themselves here, Todd, is you.

Enjoy. It's your fantasy.

Steve, K4YZ

Well your wrong, the ONLY reason the FCC dismissed the applications
were because they weren't filed during the Filing Window. If you want I
post the cover letter on my webpage and you read it for
yourself...that's if you can read.

You know steve, your an asshole, who ever gave you the title "HAM-RADIO" needs to be shot. because frankly you don't deserve that title. As for my writing skills, as I've probably stated before I'm not a writer. but I sure as hell can write a lot better then some amateurs around here.. Hell, some of letter's In the past that I've got from the FCC when they responded to a question was a hell of lot worse then what I write. FInally I think people who keep bitching about someone writing skills are trying to envade the questions being asked. Now I know your probably going to say, well if the person could write so we could understand them....well read the unstructured text and try to make sense of it....or is it too much like work.... have fun on t newsgroup Mr "Hate Radio"

Sure I can read. It's just that trying to wade through your poor
grammar, incoherant rants and frequent profanities that a challenge
exists.

And you didn't answer my question. Very rude.

> > Then >>I<< suggest YOU take your silly diatribe to

What's a "looser"...?!?!

Deal with what? Your immaturity? Your silly behaviour? Your
rantings? Your misconceptions about applicability of certain Amateur
regulations?

> > Incompetence IS a legally defensible EXCLUSION from cerain

Todd...I didn't say you were violating any rule.

I said you're incompetent.

Here it is again: "Incompetence IS a legally defensible EXCLUSION from certain rights and privileges of citizenship, INCLUDING licensure by the Federal Communications Commission."

In asserting that I said you were violating rules when that is NOT what I said clearly demonstrates YOUR incompetence with English comprehension.

FCC rules and regulations require certain fluency and competency in English. Obviously there's just one more thing that makes you ineligible for licensure in the broadcast services.

So who's discriminating, Todd?

So far, the only ***hole I see is the one who can't express himself without all the profanity and yelling...which would be you, Todd.

And by the way, Todd, "incompetence" is STILL a legally defensible EXCLUSION from certain rights and privileges. It is not "discrimination". Many laws exist for the SPECIFIC purpose of preventing the incompetent from causing harm.

So far, you're making a pretty good case for limiting your access to the airwaves to Amateur Radio...God protect us...

> > And we can include a copy of your "The FCC is Slime" diatribe

"Turst" you?

"...a lot worst"...?!?!

Maybe your behaviour "to their faces" is one of the reasons you're having to resort to broadcasting on frequencies that are illegal for broadcasting...?!?!

I "turst" you've made a lasting impression on the Commission, Todd...One that will, hopefully, prevent you from ever having a broadcast license.

have
> the balls to back up your statement.

I've already done it, Todd. Your own words are evidence that you're violating both the spirit and the letter of the law as it pertains to broadcasting on the Amateur Radio service.

You're "producing a show"...YOUR words. A "show" is for entertainment. A "bulletin" is for disseminating timely news,information and announcements.

>yet, you've never heard my
> transmission, nor, do you have the balls to explain what rules I'm
> "suppose" to be violation.

You've never been to my home, Todd, so how do you know what I have or have not heard or done?

I know you're doing your best to lose your Amateur license.

>i have two forums here and my blog which you
> can make your case yet you fail to do so.

There's no "case" for ME to make, Todd. You do it yourself.

You have acknowledged that you are producing a "show" which you
air on a frequency allocated to the Amateur Radio service, and that
this "show" incudes commentary colored with your own opinion.

That takes it out of the realm of a "news bulletin", Todd.

Ask any first year journalism student.

An "information bulletin" colored by opinion ceases to be an "information bulletin" and becomes editorial.

> A information bulletin is
> a vague word.

"AN" information bulletin" mya be a vague TERM, Todd.

However that will be up to the Engineer in your FCC District to decide upon.

> But hey, I'm there and will propbably be there a

This had to hurt.

Todd, N9OGL has a "poll" on his "blog" asking if the respondent believes his broadcasts to be legal or not.

One person voted yes. I have to assume that was his own vote...Hey, it's America and he's entitled to his own vote.

Three others, however, of which I am one, said NO. A fourth person went nolo contendre.

Now he starts ANOTHER poll asking if the respondents to the first poll actually HEARD his "show"...

Todd...NO is NO. What PART of NO did you have a comprehension problem with?

This guy obviously has some issues, Steve. Tread lightly lest you be accused under the ADA with cruelty to the mentally handicapped.

Todd's claims to inventions, to a recent state administered IQ test, his inability to put together a properly constructed sentence, his inability to spell, his lurches back and forth between upper/lower case dim-wittedness and PROFANE UPPER CASE RANTING and his delusions about the FCC being out to get him, all mark him as someone who is not quite right.

I doubt that Todd is airing any informational bulletins/broadcasts/shows at all. If he is, and the material is outside that permitted by regulation, the FCC will nail his hide to the barn door.

As to his blog: Who's reading it?

Hi Dave...You and I know that, but Todd doesn't. That's why I said
"term", rahter than "word".

Any just-about-to-be-graduated-from-third-grader wouldn't have
taht mistake...But Todd did.

> > However that will be up to the Engineer in your FCC District

Thereby providing even MORE justification for the FCC from
preventing his ascendency to commercial broadcasting.

> I doubt that Todd is airing any informational
bulletins/broadcasts/shows
> at all. If he is, and the material is outside that permitted by
> regulation, the FCC will nail his hide to the barn door.

He still doesn't get it...

His "opinion" doesn NOT meet the test of an "information
bulletin", no matter HOW impressed he is with the sound of his own
voice.

> As to his blog: Who's reading it?

I can't say I "read" it, however what parts I did read were
rambling, paranoid and accusatory.

What an idiot.

Good to see you, Dave...How's things?

Read some of the other crap this boy has written in the last 5-6 years on other newsgroups. He wanted some hams to show him how to make a transmitter out of a microwave oven. We all know that it can be done but why the hell would anyone with half a brain want to bother?? And then to solicit other hams on a newsgroup to show you how?? WTF?? He supposedly started this group "Langley Park Telecommunications," dedicated to broadcasting and supporting the arts. Then, he was arguing about copyrights, while farting around with his low power UHF TV and FM pirate stations. He was transmitting shit off of VHS tapes fer Chrissakes and his crummy signal went fer a whopping two blocks. He advertised for a pilot to show him how to finish an ultralight and show him how to fly. WTF?? He advertised for a pro bono lawyer to defend him against Wal Mart when he got fired. And, all this time I don't think he ever had sex with a woman. The guy is crazy.

We're saying the same things, Bill. If someone can be swayed, they're
not in group 1 or group 2.
>
> Yes, there are many people who "appear" to be in groups

> voting for Reagan in 80 and 84.

Those folks aren't/weren't in Group 1 or 2, that's all. Note that in
terms of the popular vote, those elections weren't landslides. But the
popular vote doesn't determine presidential elections.

>
> One other variable on a 4 year basis. From one presidential
> election to the next, there is a considerable loss of existing voters

> who have died and an influx of "new" voters who have reached
> 18 years of age, become naturalized citizens or just finally

> as new voters tend to view themselves as "independents"
> rather than being staunch democrats or republicans.

Good point!

And the point I saw somewhere about 3rd parties is a good one, too. Ross Perot effectively handed the election to Clinton, because he drew so many more votes from Bush I and Dole than he did from Clinton. In 2000 the shoe was on the other foot as Nader drew far more votes from AlGore than from Shrub. Which was truly ironic because Nader, of the Green Party, managed to put a former oil man into the White House. Note that the Green Party didn't back him in 2004!

But my basic point is the same: Successful campaigning consists of identifying those voters who you can swing to your favor (which may not mean that they vote for you!) *and* who are in places where their votes can make a difference. In 2004, it was all about getting Ohioans riled up about gay marriage.

By whom?

> You may label me as whatever you like. The differences between my
> near-space ballooning project, and your "extra out of the box" are
> significant.
>
> One big difference is that I still intend to do the project.

>

Here's a bunch more:

- The balloon project has been declared impossible by Len. Nobody has declared it impossible for Len to get his Extra out of the box.

- The balloon project involves a lot more than passing a few written and one code test.

- You have only spent a few months on the balloon project. Len made his declaration more than 5 years ago. Also, an amateur radio license has been available to him since childhood (no age limits even back then) yet he hasn't even gotten a Tech.

- You did not say you were going to reach 100,000 feet, just that you were going to try. Len said he was going for the Extra but hasn't even tried yet.

- The balloon project is a group effort. Getting a license isn't.

Lots more differences.

Not to be picking nits, Steve, but "information bulletin" is two words.

Information can be gathered through facts as well as opinions.

I doubt that Todd is airing any informational
bulletins/broadcasts/shows
at all. If he is, and the material is outside that permitted by
regulation, the FCC will nail his hide to the barn door.

I would count on it....I am on. As for material is "consisting solely
of subject matter of direct interest to the amateur service"

"Give up"???? WTF are you "giving up"?

My identity is no state secret. My call, name, and address have been in Callbooks for almost 5 decades. From there it's a pretty simple exercise to determine my phone number.

I'm not ashamed of my identity or my thoughts and ideas, and have no desire to hide my communications behind some assumed name. Why would I want to?

It is kind of an odd thing. Whereas the Balloon project is just put off
for a bit, the Party starts in some 7 months. The ballooning will wait.
Assuming I live long enough, there are years and years to do the project.

I'm a little surprised that some folk have fixated on that 100 kilofoot
thing anyhow. That isn't the goal. It is the project integration and the

experiments that are the goal. Lest I be accused of "downgrading the expectations", there are cases in which 100 kilofoot is exceeded by several thousand feet. That particular part is governed by when the balloon breaks.

> - The balloon project is a group effort. Getting a license isn't.

So because you can't write a proposal that shows you have an education
above 6th grade, and there is a no need for your local television
service, the FCC dismisses it and they are slime.
Just because you request something isn't an automatic guarantee you will
get it. The FCC doesn't exists just to grant your childish wishes.

Yea me too, I worked a guy the other day in Japan who was running a GE Microwave, modulated by a 150's all chrome toaster, into a 345 element dipole. We had a nice QSO while his pizza heated up.

How could ANYone discuss "the arts" with a creep who holds all his
sentences together with the "f" word...???

> He advertised for a pilot to show him how to finish an
ultralight...(SNIP)

Guess reading the instructions was out, eh...?!?!

> (UNSNIP)...and show him how to fly. WTF??

That's scary! An idiot like him allowed to operate an aircraft,
even if it is just an ultralight. And I know 14 year olds who hang
glide and fly ultralights. Guess Toddie needed some adult supervision?

> He advertised for a pro bono lawyer to defend him against Wal Mart
when he got fired.

My eldest is a "CSM" for Wal-Mart in Florida, and she says you
have to be a rip-roaring idiot or a thief to not be able to hold a
Wal-Mart job.

I wonder which one Toddie was...????

> And, all this time I
> don't think he ever had sex with a woman.

Thank God for small favors...All we need are more Toddies running
around. Can you imagine what idiots this idiot would parent?

> The guy is crazy.

Understatement!

Absolutely, James.

Anonyminity is for cowards and criminals. Period. Any of this
other "I am avoiding spammers" or suggestions of avoiding online
"stalkers" is assinine, at best.

Lennie and Brain are living proof that you can be an idiot on line
and not risk getting hurt despite deserving it soooooo badly! =)

One can use a "disposable" e mail address for defeating the
spammers. And if you can't put your real name on a post, you obviously
lack the strength of conviction in your own opinions, so why inflict
them on anyone else other than to be annoying?

73

Source record: 104311

The following is from the ARRL website...I brought over the first paragraphs as a starting point. The remainder may be read in it's entirety at www.arrl.org.

My question: Is this even an issue?

Less than .01% of all quilters are male...Is quilting about to burn out?

Is there some great conspiracy to prevent women from testing? Are there armed guards at the doors to bar their entrance? If so, I've never seen them.

Steve, K4YZ

QUOTE:
A Study of Amateur Radio Gender Demographics

By Ken Harker, WM5R
March 15, 2005

One of the under-represented demographics in the Amateur Radio world is women. Everyone knows that there are many fewer female hams than there are male hams, both among those licensed and those active on the air. As a competitor at some of the major Amateur Radio Direction Finding (ARDF) meets, I've noticed that the womens' entry categories have had only about a fifth as many entrants as the mens' categories. As an HF phone contester, I've observed that a very small percentage of my QSOs are made with women operators (as low as 2%!). So how many women Amateur Radio operators are there?

>From the N9OGL "BLOG":

QUOTE:

Information is 50% fact and 50% opinion, and without the opinions of
people the free flow idea's will be eliminated. The problem I see is
that amateur's don't want other amateur's to be opinionated and/or
afraid that some of those amateur's opinion might be the deep down the
truth of problems within the service.

UNQUOTE

Obviously this doesn't apply to HIM since he's removed "comments"
from the "comment's" feature of his blog. He removed existing comments
on the blog that were critical of his ideas.

He also removed the poll that was, after only five "votes",
already four to one against his opinion of right and wrong.

So...In only four days, he's proven, through his own words and
deeds, to be a two-faced lying coward who suppresses the "free speech"
of others that he claims the government allegedly keeps HIM from
expressing.

He thinks "information" is "50% fact and 50% opinion"..?!?!

And this creep wants us to let him be our source of "information
bulletins"...?!?!

Sheeeeesh!

It seems to be the same with many technical careers or hobbies. There is a lot of effort to recruit women to the engineering ranks. But not that many appear to be attracted to it.

Perhaps we need to have tight control over this sort of thing. A carreer / hobby lottery, so to speak. When you are in 6th grade, you draw at random two things, a career slip and a hobby slip. And that is what ya train for and do from then on. Strict control will have to be exercised in order to enforce gender equity!

I don't know about you, but that sounds pretty goofy to me.

That there are less women in the ARS is true enough. But that is interesting from a "why is that?" standpoint. It probably isn't so interesting from a "how do we change Ham radio to attract more women?" aspect.

Dee or Kim might be able to shed some light on that, in form of "Why I am interested in Amateur radio" or perhaps some insight on why a lot of women aren't.

> My question: Is this even an issue?

Kind of. There is a wide gender gap between men and women in the
engineering fields.

But working in the field, they account for 9 percent of all U.S. engineers

There is a quote that shows up at several sites:

"Women still face gender-specific obstacles when studying and preparing
for careers in engineering and other sciences. There is solid evidence
that mentoring can help address this disparity" said Muller"

http://tinyurl.com/5lm92

Despite the prevalence of the quote, I'm not sure what the disparities are.

Or they can force 'em to go to "tech camp"

http://tinyurl.com/5m82m

Interestingly enough, there are High schools that place emphasis on
science and math. The enrollment in these schools is roughly equal,
gender wise. But the female students tend to gravitate to liberal arts,
medicine and law.

see
http://tinyurl.com/3umlf

Finally, I'm not sure what to think. I've discussed the issue with a
woman engineer I work with. Interestingly enough, she says she KNEW she
wanted to be an engineer from the time she was a kid. No forcing to go
to camps. She thinks the recruitment efforts are not going to work,
because one does not pick engineering like one may pick a major from a
school catalog.

Oh, and she says she hates being called a "Woman Engineer". "Engineer"
by itself will do just fine thank you!

A sample of one, of course, but perhaps a little telling.

Maybe people who are interested in engineering get tin to it for that
reason, and people who are not into engineering do other things.

There's any easy way out of all this stuff, Mike: Fire the president of Harvard. Lawrence Summers made some gender-specific comments on women in math and the sciences which, while true, may cost him his job. The PC police were all over him like African flies on a dung pile in the wake of his statements.

I met Summers during his visit as Deputy Secretary of the Treasury to the U.S. Embassy in Helsinki. He showed less ego than any high level visitor I ever encountered. He was quickly known as "Call Me Larry" Summers since anyone addressing him as Mr. Summers or Secretary Summers was quickly told to "call me Larry".

There are differences in the way that men and women think. There are things which mostly interest women and there are things which mostly interest men. There are things which a lot of men and not very many women are good at. There are things which a lot of women and not very men are good at. If you don't like my statement, fire Larry Summers.

There aren't many women in amateur radio. There have never been many women in amateur radio. While the numbers have been and are likely to remain small, some of the females have been very, very good operators. Mae Burke W3CUL a CW whiz and traffic handling demon and DXers Martha Henson and Iris Colvin W6QL, come to mind.

Now we need Len Anderson to chime in with something about how amateur radio is predominately "white".

Your source of information for what, Leonard? Removal of morse testing?
Proof of ARRL dishonesty?

> Jimmie is of the opinion that ANY toddler (with a ham
> license) ALWAYS behaves and could never, ever do anything
> wrong on the air. Neither do such toddlers EVER cause
> trouble on a playground or with their parents in super-
> markets, etc., etc., etc.

There is plenty of proof that adults cause enforcement problems in
amateur radio. Can you come up with any proof that amateur radio ops
who are children have caused any enforcement problems?

> Of course, if such code-tested kids grow up to be extras
> then they will be beyond reproach! PCTA extras can never
> ever be charged with ANY impropriety!

Really? Have you found the mother lode of "special" mushrooms?

> Tsk, tsk. The league continues to Sin by Omission on
> much of its "news." Such "evidence" is glaringly in
> view by comparing REAL news sources output about an
> event also "reported" by the league.

Isn't the ARRL a REAL source of amateur radio news? Have you made a Sin
of Commission? Glaringly in view? You're "reportedly" a PROFESSIONAL
writer. Tsk, tsk.

> The league is the league and beyond reproach. None may
> gainsay a thing nasty about them. The league is holy.

The ARRL is just something else you in which you play no part.

> By their virtue of being PCTA extras, gods of radio like
> Jimmie KNOW EVERYTHING and what they KNOW is the TRUTH.

I thought you believed it to be the TRVTH. Do you KNOW EVERYTHING?

> Look in other threads in this newsgroup. Jimmie KNOWS
> about things having NOTHING to do with amateur radio
> and doesn't hesitate to tell the world he is "right."

...and feel free to look at any number of other thread in this newsgroup

factual errors are legend.

> Never mind that Jimmie has NEVER been IN government or
> in national party politics, he KNOWS it all without EVER
> being IN government nor expressing any desire to be IN
> government or national politics.

Have you EVER been IN government, Len? Do you KNOW all about party
politics? Have you ever stated that you'd win a political election
"right of the box"?

> Tsk, tsk, tsk...I've never claimed to be IN amateur radio
> since I began advocating the elimination of the morse code
> test. [over two decades ago, by the way]

How very peculiar. You appoint yourself advocate for the removal of
morse code testing for something in which you have no involvement and
you stay with it for twenty years. In all that time, you've never
attempted to pass an exam which would allow you to be a participant.
Tsk, tsk, tsk.

> Brian, he just CANNOT change his mind.

In your twenty years of self-appointed advocacy with regard to removal of the morse code test in amateur radio, were you ever able to change your mind on the issue? If not, it would appear that you CANNOT change your mind about the issue. There is evidence that you can easily change your mind about that "Extra right out of the box".

> But, we can't disturb this god of radio right now. He
> is very busy manufacturing a mountain out of a molehill

> I wrote to the FCC over six years ago, possibly preparing
> a writ for submission to the Supreme Court or something...

It isn't a molehill, Leonard. You did write to the FCC in support of a minimum age for entry into amateur radio. There is no indication that you ever changed your mind on that subject. There as been no disavowal from you.

I'm not Len, but it is. There are very few black hams in the US, although they have their own organisation, called OMIK. Apparently OMIK's original purpose was for black mobile operators to pass info about where they could stay, eat, buy gas, etc under the 'Jim Crow' laws.

Whilst it's hard to tell someone's race on air, it also seems that in the Washington DC area the African Americans mostly seem to be self-segregated on the 145.110 repeater. Of course, that machine does belong to a club in the middle of the city, and not many white people live there.

Now you've really opened up a can of worms, Dave.

Critizing a idea is one thing, badmouth me on my website no. you have the right to critize my statements however, there were no such comment instead all that was there was people bad mouthing me. You have no right to get on my "private" website and badmouth me. Again, I'm under no obligation to allow people to come onto my "private website" and badmouth me.

Yep. Scientific fields too. Whole bunch of reasons for it.

>But working in the field, they account for 9 percent of all U.S.
engineers

Ya gotta question a raw stat with no background. What, exactly, do the
consider
a "U. S. engineer"?

Somebody with an engineering degree?
Somebody with an engineering license?
Somebody with "engineer" or "engineering" in the title?
Somebody who describes their job that way?

Or some other criteria?
>

disparities are.

Goes back to long before engineering school. When there's a choice,
more boys
than girls take math and physics. The disparity isn't as bad as it used
to be,
but it's still there. That's just one reason - there are lots more.

> Or they can force 'em to go to "tech camp"
>
> http://tinyurl.com/5m82m

Do they not want to go?

arts,
> medicine and law.
>
> see
> http://tinyurl.com/3umlf

Is that a problem?

It seems to me that the goal is equality of opportunity, not equality
of
outcome.

> Finally, I'm not sure what to think. I've discussed the issue with a

> because one does not pick engineering like one may pick a major from
a
> school catalog.

I know several female engineers. Their reasons for choosing it vary all
over the place. Some, like your friend, wouldn't dream of doing
anything
else. Others had it suggested to them, liked the idea, and went with
it.
Some had to overcome discrimination, others never noticed any
difference.
>
> Oh, and she says she hates being called a "Woman Engineer".
"Engineer"
> by itself will do just fine thank you!

Exactly.

> A sample of one, of course, but perhaps a little telling.
>
> Maybe people who are interested in engineering get tin to it for
that
> reason, and people who are not into engineering do other things.
>
Some other reasons:

- Someone who goes into engineering will have an educational and professional life surrounded by guys and all their characteristics, good and bad. Some women have no problem with that, others would prefer a more gender-balanced situation.

- Because technology changes so fast, temporarily dropping out of active employment in many fields in order to raise a family will make you unemployable in that field. How many jobs are there for computer folks whose skills and knowledge are 5 years behind? The usual solution for fields like health care is to work part time. But their aren't many part-time engineering jobs.

- Like it or not, there *are* some gender-related differences. They may be all due to cultural forces (quite likely), or all due to genetics (extremely unlikely), or some mix, but the differences are there. And they're not going to go away overnight.

As I said before - It seems to me that the goal is equality of opportunity, not equality of outcome.

He's been question a few times, but that's about it. I remember reading an articles about the FCC going to his house and comfiming that he was in compliance with Part 97. I think right now their question him about not being at the control point. But as far as his opinionated program the FCC has stated a number of times that it is in compliance with Part 97. The problem is many ham operator can't deal with that fact.

2868. " BIG BUCKS" WITH ONLY $6.00 INVESTMENT "NO BULL"!!!!

Newsgroup: rec.radio.amateur.policy
Date: 2005-03-16 18:59:01 UTC
From: bscruggins2000@yahoo.com
Message-ID: <1110999541.121451.71570@l41g2000cwc.googlegroups.com>
Source record: 104334

HOW TO TURN $6 INTO $6,000!!!!!! READING THIS COULD CHANGE YOUR LIFE!

I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, Yeah right, this must be a scam,but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: what have I got to lose except 6 stamps and $6.00, right? Then I invested the measly $6.00. Well GUESS WHAT!!... within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it`s still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it`s still coming in rapidly. It`s certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!! Let me tell you how this works and most importantly, why it works....Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy!
Suggestion: Read this entire message carefully! (Print it out or download it.) Follow the simple directions and watch the money come in! It`s easy. It`s legal. And, your investment is only $6.00 (Plus postage)

IMPORTANT: This is not a scam; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are followed exactly, you will receive extraordinary dividends.

PLEASE NOTE: Please follow these directions PERCISELY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it`s a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the

mailing lists is secondary to the income which is made from people like you and me asking to be included in that list. Here are the 4 easy steps to success:

STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper; PLEASE PUT ME ON YOUR MAILING LIST. Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal! Mail the 6 envelopes to the following addresses:

Mailing Addresses

1. P. FREY, 4577 W. PONDS CIR, LITTLETON, CO 80123
2. E. DE LEON, 14014 Rosecrest, Houston,TX 77045
3. A. Lopez, 810 Ave.J, South Houston TX 77587
4. L. Pacheco, 812 Ave.J, South Houston, TX 77587
5. K. Bat, 9335 Alcona Street, Lanham, MD 20706
6. B. Scruggins, P.O. Box 845 Port Barre, LA 70577

STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more money you make! This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws.
Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again.

PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way.

NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.)
So, as each post is downloaded and the directions carefully followed,

six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you`re in business!
---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS---------- Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select `copy` from the edit menu. This will copy the entire letter into the computer`s memory.

Step 2) Open a blank `notepad` file and place your cursor at the top of the blank page. From the `edit` menu select `paste`. This will paste a copy of the letter into notepad so that you can add your name to the list.
Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you`ll always have this file to go back to.

Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.) Just example you log on any search engine like, yahoo.com,google.com, altavista.com,excite.com then you search with this subject millionaire message board? or money making message
board? or employment message board? or money making discussions? or money making forum? or business message board? etc. You will find thousand & thousand message board. Click one by one then you will find the option post a new message.
Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You`re done with your first one! Congratulations...THAT`S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!

REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200
That`s it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it.
JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.

Now the WHY part: Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now

those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, "What if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet.

Remember: Play FAIRLY and HONESTLY and this will really work.

The commission has corresponded with MAN via official U.S. mail and
has inspected his station. The commission has *NEVER* sanctioned
MAN. Big difference, a difference which has the societal misfits in this
forum frothing at their collective mouths. ROTFLMAO!

Nick

Steve,

What this little Dumbass hasn't hold you is how old those post are. Since that time I've been enjoy the free flight of ultralights and I'm currently working on my Sports license, I only have 15 more hours to go. As for walmat that was a misunderstanding on my part, I wasn't fired. The State of Illinois will also back this up because since I wasn't fired I wasn't intittled to unemployment, which I didn't recieve. I left walmart on my own accord and if I want to I could go back to work there, but I will not, I've worked 5 years and that was enough. The walmart here is consider a stepping stone until a better job comes up, unless you a manager, Ass. Manager or a CSM who see walmart as a career. I've moved on and currently working on my degree in computer science and plan to get a better paying job. I left walmart for that reason, to get a better paying job.

Read some of the other crap this boy has written in the last 5-6 years

<<<What this little Dumbass hasn't hold you is how old those post are.>>>

That's 5-6 years ago, on a standard calendar, 1999-2000. Todd, we know that you cannot read (or write for that matter), YOU stated that you were fired. YOU put out the word that you were looking for a pro bono lawyer to either get your job back or get some compensation. That is all that I am going on, YOUR OWN STATEMENTS. Was it another of your lies? Or do you lie so much that you forget what you lied about.

N9 Out Goes the Legitimacies

First off I just started that blog today, so aturally there isn't going to be anthing there. Right now I don't have the time because I'm getting ready to go school. The whole purpose of that blog was because some cry babies on here was calling me a liar, which I am not. So if you don't want to be creative my suggestion to you is stay here in the this newsgroup with all the other dumbass appliance users.

A few years back, when the FCC was breathing down his throat, MAN took a very sudden hiatus, he claimed it was because he took a teaching job. I figure he did the same thing again. Unfortunately for him there is enough documentation at the FCC for his crap over the last many years that he will be history when its renewal time.

There's been women hams over the years. Find an old issue
of QST from the early 60's and there's usually a column
"YL news" or such. Usually with a small headline drawing
of a woman ham and her shack, one of the pieces of equipment
with a potted plant atop of it. Some were probably wives of
male hams, and there were probably some women who were in
ham radio without such a connection. I don't think the
percentage has varied much over the years.

There may be some gender differences, but such are less
than something like 5% difference. Hardly significant.
And possibly all due to the culture and not biology, who
knows.

Other male dominated hobbies like model railroading also
have a few women, about the same percentage as ham radio.

I also read the article. I think it was an interesting study but did not see any attempt to indicate that this was an issue or that anyone was trying to keep women out. Personally I classify it as a fun but useless bit of trivia.

You put up a page and brag about yourself but then don't post the info
that you are braging about? You are a pompous ass to call everybody here
dumbass appliance users.
I went to QRZ and saw your picture, man are you gay looking!

Well Mike, I got interested in Amateur Radio because my former husband dragged me to a class saying "Let's do this TOGETHER." After I was involved, I found that I enjoyed it for its own sake. So that's when I decided to continue to study and upgrade and go all the way to Extra. Although he and I parted a few years ago, I still am active in ham radio.

As you may or may not know, I am an engineer. However, I really can't say why this and other technical fields don't attract more women. One of my daughter's also went into engineering and the other one couldn't care less for technical fields.

I'll give this some more thought though but right now must run my daughter around.

Of course you quit, faggot, because every time someone took a mystery shit in the store, they called you to clean it up. Then, you got caught sucking the manager's cock to get a head on the job. Then the state tested your IQ. Don't forget Julie.

Shades of 313 all over again?

IIRC, you said something to the effect of "...never have a battle of
wits with an UNARMED man..." a time or two on the frequency.

Funny how these characters all resort to the same
name-calling/mud-flinging/cursing/racism cr@pola every time someone
logically maneuvers them into a corner - or calls them on their BS.

The moron said "when I asked to prove it they invaded the question."
How the hell do you invade a question?
The picture on you site is gayer than the one on QRZ.
I'm all for education but you have to realize that a Community College
isn't a University!

2895. Re: ARS License Numbers

Newsgroup: rec.radio.amateur.policy
Date: 2005-03-17 00:07:47 UTC
From: N2EY@AOL.COM
Message-ID: <1111018067.716929.110670@l41g2000cwc.googlegroups.com>
Source record: 104361

These are the numbers of current, unexpired amateur licenses held
byindividuals on the stated dates:

As of May 14, 2000:

Novice - 49,329
Technician - 205,394
Technician Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750

Total Tech/TechPlus - 334,254

Total all classes - 674,792

As of March 14, 2005:

Novice - 29,071 (decrease of 20,258)
Technician - 266,823 (increase of 61,429)
Technician Plus - 51,476 (decrease of 77,384)
General - 137,283 (increase of 24,606)
Advanced - 76,997 (decrease of 22,785)
Extra - 106,297 (increase of 27,547)

Total Tech/TechPlus - 318,299 (decrease of 15,955)

Total all classes - 667,947 (decrease of 6,845)

Note that these totals do not include licenses that
have expired but are in the grace period. They also
do not include club, military, RACES or other
station-only licenses.

I knew I wanted to do something in the math/science/technical field but
didn't home in on engineering specifically until I was a junior in high
school. I tend to agree that the recruitment efforts will have little
impact as if you don't have the inclination you won't pick the field even if
recruited. Or if you do pick it, you won't stay with it.

I'd say it's more of an interest than ability. One can be good at something
even without ability if they care to put in the extra effort (i.e. have
enough interest to do so). Why the interests differ would be an interesting
issue.

Yep. I sure as hell wouldn't waste the last few years of my life
saying that I was going to send morse code so badly that a no-code Tech
couldn't copy it with a morse reader. I've got more positive things to
do.

Actually I happen to think there are some genetic gender differences but
that they are not great. We can all do math for example but some like it
and some don't. Those who don't like it have to have other reasons for
pursuing it other than love of math itself.

> As I said before - It seems to me that the goal is equality of
> opportunity, not equality of outcome.
>

That is what is truly important. There needs to be enough freedom that
those who fall outside the typical band can pursue those interests. Don't
force women to be engineers but create an environment such that those who
are so inclined can pursue it without having to battle society. Similarly
those men who wish to be nurses or secretaries or whatever should be free to
pursue those goals without society looking askance at them. At the same
time, those who wish to follow traditional paths should also be free to do
so without extremists (such as some of the NAG and NOW members) looking down
on them.

Maybe one of the seven hostile actions.

My son is studying the concept of idioms in school. I told him that "Seven hostile actions" was an idiom on rrap, at that "K4YZ" was an idiot on rrap.

There's beeen a lot of great ansswers here, save for Lennie's
usual attempt to be racist and chauvanistic.

What I am trying to get at, though, is "so what"...?!?!

Dee, Kim, don't get fussed at me...My only point here is that
there are NO barriers to ANYone, male, female, black, white, straight,
gay, etc etc etc getting a license.

Just like there's nothing preventing me from picking up a quilting
needle if I wanted to, or starting a floral shop, etc.

I received an off-line response that cited a lawsuit agaist the
ARRL in "the 92-94 time frame" that cited a suit brought against the
League. Sounds more like a labor dispute to me!

Does ANY organization have an "obligation" to HAVE to "recruit" on
behalf of an avocation that many consider "just a hobby"...?!?!

Perhaps I should get "equal time" so I can inform him that his
father is known worlwide as a pathological liar.

Google archives have the documents to support it.

Shame for you, Brain, that when your son get's around to looking
stuff up on the Internet in a few years, he'll find these exchanges and
be able to "follow the bread crumbs" back to the truth...about
you...his father.

Wonder what he'll think then...?!?! Better get the silver polish
out now so you can pray it get's THAT tarnish off!

If you can stand other people considering you weird, more power to you as
far as I'm concerned. I'm sure no one dared tell Rosie Grier (an NFL player
for those too young to remember) that he was odd for doing needlepoint. I
believe he even appeared in ads in women's magazines for needlepoint
supplies.

N9OGL wrote: (without citing whom he was responding to)
> For your information you redneck, I've started another page where I
> plan to post all my idea's and inventions........

Been there; seen that. There's currently one "invention" listed which has absolutely NOTHING to offer the Amateur Radio service.

Let me repeat here this one key point: Internet communications =! radiocommunications.

As an aside - the "invention" relies on the use of peer-to-peer I-net networking run in conjunction with local packet nodes for content forwarding. What amateur radio packet BBS SysOp in his or her right mind is going to allow their station to be used as a conduit for traffic from things such as Kazaa, Limewire and so forth?

In short, that's what was proposed.

Again - Internet communications =! radiocommunications. In this case, there are some very, very good reasons for wanting the two kept separate...

Tightly regulating the P2P apps which are allowed to connect into the nodes might be one way of addressing these concerns. But isn't this just a solution to a problem that doesn't exist?

Let us also not forget the possibility of the network being abused as a warez/music/movie distribution pipe. I for one would d@mn sure not want the resultant heat THAT would generate to happen to ham radio.

Wasn't he cited last year or thereabouts for failure to have a control operator present at his station when the station was on the air (transmitting)?

I seem to recall something about a "Radio Shack timer" being mentioned in the citation...

Yep....shades of 313. And this goofball has NO IDEA what that means.

But like I said.....it is fun to slap around a goof like him. Guess I need
to back off and let him re-load his water pistol.

FROM N9OGL INVENTION WEBSITE:

I've read your post on the newsgroup, and I have a few things to say,
This system would not be hooked into Kazaa or limewire or any other p2p
network. It would be a network that only amatuer would be able to use
(like Echolink). As for Warz, Movies and Music, Movies would be hard to
download on this system because the network is "bottlenecked" at the
node site. The same would also apply to music and warz, it wouldn't
work because of the speed on the radio side and the "bottleneck" at the
site.

That's right, Len. There are far fewer blacks than whites in amateur radio in the United States. Amateur radio in the U.S. is open to anyone.

Rosie even had a short singing career. I saw him live as part of a
"Shindig" tour in Beckley, WV in 1964 or 65. He performed on the same
bill as Jerry and the Pacemakers, The Dixie Cups, Shirley Ellis (The
Name Game) and a young, clean-shaven Willie Nelson (doing pop songs!).

>Maybe there will still be some in "the box" when he gets around to it.

You mean the "box of cereal," the one with the
astronaut wings in it? :-)

Tsk. The "near space" thing has already been done
by "real" hams. Mikey can't claim any "pioneering"
things about that now or in the future. He still
seems to want all those congratulations for somthing
not done yet. Curious.

I'm surprised big badass dave hasn't jumped in here
yet harrumphing about getting a license or shut uppa
yo face. :-) [just call him davie] :-)

[oops, spoke too soon...:-)]

Tsk. It's not been my intention to get any amateur
license. I got a commercial license (with the FCC
on the first exam) some 49 years ago...and used that.
My advocacy is just to eliminate the morse code test.
So many sorry asses in here just don't see that.
Because they can't see that, they invent all sorts of

motives. Tsk, tsk, tsk.

If anyone wants to see what got me interested in REAL radio, there's two documents on this site:

http://kauko.hallikainen.org/history/equipment/

Look under "Stations" for the PDF links. Both will take about an hour to download at dial-up data rates of 50 KBPS.

>From the reflectors:

A 'seasoned' ham, age 60 is visiting the doctor for his annual physical.

The doctor says: "I'm amazed at your good shape, what's your secret?"

The OM replies: "Well Doc, it's like this. I'm a ham operator who likes Morse Code, and that keeps me young. I get up well before dawn every day for some early morning high-speed Morse code conversations with operators around the country - that keeps my mind sharp.

Then I generally putter around my workshop building projects, which keeps my fingers and arms limber and wards off arthritis.

In the afternoon, I often climb my antenna tower for adjustments, or move heavy radio equipment around, which gives me plenty of exercise. At night, I like to read technical books and magazines which soothe my eyes, and when I'm finished, I sleep great."

The Doctor says: "That's amazing; how old was your Dad when he died?"

The OM replies: "Died!?" Who said anything about Dad dying? He's a spry man of 79, he's also a ham operator, and in fact, this morning I had my usual Morse code conversation with him and he's doing fine."

Now the Doctor is really impressed. "Well, how old was your Grandfather when he died?"

The OM replies: "Died!?" Who said anything about Grandpa dying? He's 98 and...."

Now the Doctor is getting a bit exasperated: "Don't tell me, he was on the air with you this morning also..."

OM: "Actually Doc, he usually is, but this morning he got married.":

Doc: "Got married? Why on earth would a man of 98 want to get married?"

OM: "Want to!?" Who said anything about Grandpa wanting to?...."

One of the guiding principles of US lawmaking is that there must be a
reason for every law. IOW, evidence that a law solves or prevents a
problem.

What problem does an age requirement for a ham license solve?

> > Never mind that my source of information (and cute picture)
> > of those two "youngest hams in the world" at 6 years old was
> > the ARRL News, on their website.

The fact that some 6 year olds passed ham license tests is not
evidence of any problem. Nor is it evidence of dishonesty.

I think Len is jealous of those children.

> Jimmie wanna say I "lie."

Who is "Jimmie"? Can't be me.

Who is "Jimmie"?

> > is of the opinion that ANY toddler (with a ham
> > license) ALWAYS behaves and could never, ever do anything
> > wrong on the air.

Well, that can't be me. I've never written anything even
remotely like that.

Also, six-year-olds aren't "toddlers". That term refers to children in
the 1-3 year old range, at most. Once again, Len
makes a telling mistake.

Len has also not provided any evidence of a problem caused by
lack of a license age requirement. His proposed age requirement
would bar people more than double the age of a six-year-old
from any class of ham license - for no reason except for Len's
admitted problems with integrating youngsters into what *he*
considers adult activities. IOW, it's *his* problem.

> > Neither do such toddlers EVER cause
> > trouble on a playground or with their parents in super-
> > markets, etc., etc., etc.

Six year olds aren't toddlers. Nor are 13 year olds.

Len behaves like a toddler in here, though. ;-) ;-)
>

Who is "Jimmie"?

Perhaps it's one of Len's alter-egos, because he sure seems to consider
himself to be the above description.

> from you.
>
Nor any evidence of problems caused by lack of an age limit, nor
evidence of dishonesty by the VEs who gave the license exams to those
six-year-olds.

Len's "logic" boils down to this:

- He thinks there's no way a six year old could pass the tests honestly. Never mind that he doesn't know the six-year-olds in question, nor has he ever passed any amateur exam, he simply KNOWS there must be "fraud" involved.

- He thinks that even though there hasn't been an age requirement for a US ham license since the very beginning of such licensing 93 years ago, such a requirement MUST be added to the rules - even though he can present not a single case of a problem or enforcement action caused by the lack of such a requirement.

I really do think he's jealous.

At this point it's still a solution looking for a problem.

Seriously.

MSYS, FBB and several other radio-based BBS systems will do all of what you described. With MSYS, you have the ability to serve content from callbook CDs or other mounted media - so a "Sale" or "Mods" directory could be readily served up.

"...It would be a network that only amatuer would be able to use (like Echolink)..."

Who is going to develop this app? Or is there one currently available? How do you verify that -only amateur radio operators- can access the I-net sites? IOW, what does your security model look like? Which parts of the path are to be encrypted (so as to protect login credentials, for example) and by what means will the encryption be accomplished?

I know a bit about this area, and can unequivocally say thay security in such a system would not be trivial. Nor would the potential for abuse, especially if there is any type of connection to it that can directly be reached through the Internet. Choose your operating system (platform) unwisely and the headaches become even bigger.

Guess all that hullabaloo over the recent "SpaceShip One" stuff
was silly too? "Man" has already done the suborbital thing before, yet
it seems there is still a need, even commercial opportunites, for
suborbital space travel.

Can you show us where further experimenting with hig altitude
baloons would NOT be comercially viable?

> Tsk. It's not been my intention to get any amateur
> license. I got a commercial license (with the FCC
> on the first exam) some 49 years ago...and used that.

Acknowledgement of the lie. Finally.

> My advocacy is just to eliminate the morse code test.

Then why are you in here going on about high altitude balloons?
They have nothing to do with Morse Code examinations.

> So many sorry ##### in here just don't see that.
> Because they can't see that, they invent all sorts of
> motives. Tsk, tsk, tsk.

We can see a lot, Lennie. We can see your acknowledged lie above,
and the further lie of your intent in this discussion group.

> If anyone wants to see what got me interested in

>
> My question: Is this even an issue?

Kind of. There is a wide gender gap between men and women in the
engineering fields.

But working in the field, they account for 9 percent of all U.S. engineers

There is a quote that shows up at several sites:

"Women still face gender-specific obstacles when studying and preparing
for careers in engineering and other sciences. There is solid evidence
that mentoring can help address this disparity" said Muller"

http://tinyurl.com/5lm92

Despite the prevalence of the quote, I'm not sure what the disparities are.

Or they can force 'em to go to "tech camp"

http://tinyurl.com/5m82m

Interestingly enough, there are High schools that place emphasis on
science and math. The enrollment in these schools is roughly equal,
gender wise. But the female students tend to gravitate to liberal arts,
medicine and law.

see
http://tinyurl.com/3umlf

Finally, I'm not sure what to think. I've discussed the issue with a
woman engineer I work with. Interestingly enough, she says she KNEW she
wanted to be an engineer from the time she was a kid. No forcing to go
to camps. She thinks the recruitment efforts are not going to work,
because one does not pick engineering like one may pick a major from a
school catalog.

Oh, and she says she hates being called a "Woman Engineer". "Engineer"
by itself will do just fine thank you!

A sample of one, of course, but perhaps a little telling.

Maybe people who are interested in engineering get tin to it for that
reason, and people who are not into engineering do other things.

Yep. Scientific fields too. Whole bunch of reasons for it.

>But working in the field, they account for 9 percent of all U.S.
engineers

Ya gotta question a raw stat with no background. What, exactly, do the
consider
a "U. S. engineer"?

Somebody with an engineering degree?
Somebody with an engineering license?
Somebody with "engineer" or "engineering" in the title?
Somebody who describes their job that way?

Or some other criteria?
>
> There is a quote that shows up at several sites:
>

>
> Despite the prevalence of the quote, I'm not sure what the
disparities are.

Goes back to long before engineering school. When there's a choice,
more boys
than girls take math and physics. The disparity isn't as bad as it used
to be,
but it's still there. That's just one reason - there are lots more.

> Or they can force 'em to go to "tech camp"
>
> http://tinyurl.com/5m82m

Do they not want to go?

> Interestingly enough, there are High schools that place emphasis on
> science and math. The enrollment in these schools is roughly equal,
> gender wise. But the female students tend to gravitate to liberal
arts,
> medicine and law.
>
> see
> http://tinyurl.com/3umlf

Is that a problem?

It seems to me that the goal is equality of opportunity, not equality
of
outcome.

> Finally, I'm not sure what to think. I've discussed the issue with a

> woman engineer I work with. Interestingly enough, she says she KNEW
she
> wanted to be an engineer from the time she was a kid. No forcing to

> because one does not pick engineering like one may pick a major from
a
> school catalog.

I know several female engineers. Their reasons for choosing it vary all
over the place. Some, like your friend, wouldn't dream of doing
anything
else. Others had it suggested to them, liked the idea, and went with
it.
Some had to overcome discrimination, others never noticed any
difference.
>
> Oh, and she says she hates being called a "Woman Engineer".
"Engineer"
> by itself will do just fine thank you!

Exactly.

> A sample of one, of course, but perhaps a little telling.
>
> Maybe people who are interested in engineering get tin to it for
that
> reason, and people who are not into engineering do other things.
>
Some other reasons:

- Someone who goes into engineering will have an educational and professional life surrounded by guys and all their characteristics, good and bad. Some women have no problem with that, others would prefer a more gender-balanced situation.

- Because technology changes so fast, temporarily dropping out of active employment in many fields in order to raise a family will make you unemployable in that field. How many jobs are there for computer folks whose skills and knowledge are 5 years behind? The usual solution for fields like health care is to work part time. But their aren't many part-time engineering jobs.

- Like it or not, there *are* some gender-related differences. They may be all due to cultural forces (quite likely), or all due to genetics (extremely unlikely), or some mix, but the differences are there. And they're not going to go away overnight.

As I said before - It seems to me that the goal is equality of opportunity, not equality of outcome.

Congrats on your upcoming "Extra right out of the box", Leonard.

> I'm surprised big badass dave hasn't jumped in here
> yet harrumphing about getting a license or shut uppa

> yo face. :-) [just call him davie] :-)

Okay, Lennie, (or should I use "little wizened Lennie"?) It is much more entertaining to let you type until your fingers bleed, about something in which you are irrelevant.

> [oops, spoke too soon...:-)]

You do that frequently. :-)

> Tsk. It's not been my intention to get any amateur
> license.

The issue of whether you have had an intention of obtaining an amateur radio license seemingly depends upon the tides. You've indicated that you want such a license. You've indicated that you don't want it. Tsk.

> I got a commercial license (with the FCC
> on the first exam) some 49 years ago...and used that.

...not for amateur radio operation, you haven't.

> My advocacy is just to eliminate the morse code test.

So you've said. In practice, you're actions and words extend far beyond that claim.

> So many sorry asses in here just don't see that.

It'd be easier to see if it happened to be true.

> Because they can't see that, they invent all sorts of
> motives. Tsk, tsk, tsk.

You have to have at least one motive. Nobody obsesses about the regulation of something in which he isn't involved over a period of twenty years. Why it would take a complete crackpot to do... Oh. Never mind.

> If anyone wants to see what got me interested in
> REAL radio, there's two documents on this site:

> http://kauko.hallikainen.org/history/equipment/

I appreciate your interest in REAL radio. What got you interested in amateur radio to the extent that you decided to set out to change it to something which meets with your approval?

> Look under "Stations" for the PDF links. Both will
> take about an hour to download at dial-up data
> rates of 50 KBPS.

No thanks. It is likely more of the same stuff we've read here for nearly a decade.

You've "never" asked yourself (or anyone else) WHY that
is?

Tsk, tsk, tsk. Mr. "equal opportunity" Heil with all
the sarcastic arrogance he can muster DOES NOT EXPLAIN
WHY U.S. amateur radio is essentially a white man's
"club." Oh, my, how hypocritical can you get?

>> >Whilst it's hard to tell someone's race on air, it also seems that

Are you THAT brain-dead or living-in-fantasy while
listening to "CW" that you CAN tell gender of the
sender?!?

What do you do on hearing that the other party is
female, raise the beep pitch with your BFO knob?!?

Jay-suss...big badass dave is hard-put to get
anything to attempt humiliation and denigration

of his "opponents." Tsk, tsk.

>> >Now you've really opened up a can of worms, Dave.
>>
>> Big badass dave LIKES worms, Alun. :-)
>
>Yes, I do, but I'm not awfully fond of you.

AWWWWWW...poor lil davie is ALL UPSET because he isn't "loved and respected?!?" He wanna "take it out" on others?

Poor guy is looking for love in all the wrong places. Tsk, tsk, tsk.

GET WITH THE PROGRAM. A discussion of anything controversial WILL have all sorts of people "you don't like."

Sunnuvagun! [as Hans likes to say...:-)]

Here's a newsflash, sweetums, it is NOT necessary to "like someone" about anything. The SUBJECT is (or should be) the discussion point...NOT the person or personality of whover YOU disagree with.

U.S. amateur radio was NOT created especially for Dave Heil to enjoy. Dave Heil has NO more control over ham radio than I do...believe it or not!

Dave Heil is NOT an FCC commissioner or staffer, does NOT "rule" anything but lines on paper pads. All of Dave Heil's "tenure" in amateur radio involves keeping his amateur license renewed. All the rest is arrogant posturing of the type of personality that needs to "control" everyone else. Dave Heil tries to "control" others by attempts at humiliation and denigration, then gets sooooooooooo upset when he gets the same (and more) tossed right back in his face. Poor baby...and he thought he was "in control." Tsk, tsk, tsk.

Does Dave Heil want a nice ARRL-south website where all can congratulate him on his long "career" as an amateur, rigidly following the league rulebook? No problem...easy thing to do ELSEWHERE. Posture and preen about yourself all you want (and you do so seem to want that) ELSEWHERE. U.S. amateur radio is NOT under YOUR control and won't be. If you want to pretend YOU control it, go ELSEWHERE.

Meanwhile, the demographics on U.S. amateur radio show de facto that it is a WHITE MEN'S CLUB. If Davie

wanna be "equal opportunity for all" (like he puts on to me), then Davie Heil ought to for damn sure go out and DO something about that. [the rest of the world does not exist to serve Davie Heil...or any PCTA] Posturing a lot of bullshit about "...it's open to all" may be the SPIN that all flag-waving, arrogant WHITE extras wanna rave about, but it's clearly NOT the case. It hasn't been the case for half a century.

Davie Heil will NOT address the de facto WHITE MEN'S CLUB other than to misdirect into personal denigration against another. To me is going to come back with that idiotic "promise" that I allegedly made...about five years ago. Tsk, tsk. I NEVER took any "oath" or "vows" that I would do such a thing. Got that, Davie? NO "oaths," "vows," or promises.

Doesn't matter on the SUBJECT whether or not I "get" a ham license. Big badass davie IS going to find some sort of personal denigration "charge" to misdirect the thread SUBJECT onto my person's alleged "faults." :-) He can't help it. He just doesn't like those having differing opinions than his.

Davie Heil has been trying to toss me off this news-group for over seven years on all sorts of specious "charges." Tsk. He's FAILED! I'm still here. Poor guy must be twins (he's beside himself).

Failure is NOT an option, Davie.

TRY to get back ON the SUBJECT...WITHOUT resorting to all the alleged "faults" of another person. I don't think you can do it.

What FEDERAL CASE is Jimmie talking about? :-)

>The fact that some 6 year olds passed ham license tests is not
>evidence of any problem. Nor is it evidence of dishonesty.

Again, the LAWGIVER has spoken!!

>I think Len is jealous of those children.

? Sounds like Jimmie has connected his earlobes to
115 VAC again to get an "electric radio thrill."

>> Jimmie wanna say I "lie."
>
>Who is "Jimmie"? Can't be me.

Jimmie is SO YOU!

...especially with that "cool" women's tee on!

>Well, that can't be me. I've never written anything even
>remotely like that.

Riiiiight... :-)

>Also, six-year-olds aren't "toddlers". That term refers to children in
>the 1-3 year old range, at most. Once again, Len
>makes a telling mistake.

"Chicago, Chicago, that toddlin' town..."

Ever hear that song, sweetums? Or do you only listen
to music that comes from east of Ohio? :-)

"Toddlin'," a contraction of "toddler." Colloquial.

Poor Jimmie is desperate to MANUFACTURE a "fault!"

>Len has also not provided any evidence of a problem caused by
>lack of a license age requirement. His proposed age requirement
>would bar people more than double the age of a six-year-old
>from any class of ham license - for no reason except for Len's
>admitted problems with integrating youngsters into what *he*
>considers adult activities. IOW, it's *his* problem.

No, it's YOUR problem, sweetums.

I made a SUGGESTION to the FCC that they filed on
13 January 1999. I've NOT pursued that since.

But, a whole heap of ANAL-RETENTIVE PCTA extras
are trying to make a broadway production out of
that! Jay-suss, that's weird and wired.

>Apparently not. Thus the misdirection by Len.

Jimmie the Miccolis wants to resort to Personal
Denigration Misdirection again.

Tsk. I've tried to drop the whole subject of "age
requirements" and all you ANAL-RETENTIVE PCTA extras
are trying out for the Spanish Inquisition again.

>> The ARRL is just something else you in which you play no part.
>
>Like rearing children.

Tsk, been there, done that, it should NOT matter in here.

But, since it is SOOOOOOO important a history fact,
please explain how MANY CHILDREN James P. Miccolis
has "reared?" In or out of wedlock?

We all DO hope when you wrote "reared" that you meant
raising them...

Remember that "reared" has another meaning...and
something that is telling is a certain fondness for
"cool" women's tees. Tsk, tsk, tsk.

>> > By their virtue of being PCTA extras, gods of radio like
>> > Jimmie KNOW EVERYTHING and what they KNOW is the TRUTH.
>
>Who is "Jimmie"?

None other than JAMES P. MICCOLIS! :-)

What does the "P" stand for? "Putz?" :-)

>> How very peculiar. You appoint yourself advocate for the removal of
>> morse code testing for something in which you have no involvement

and
>> you stay with it for twenty years. In all that time, you've never
>> attempted to pass an exam which would allow you to be a participant.
>> Tsk, tsk, tsk.
>
>Pot...kettle....

"Bill of Rights"...First Amendment of the United States
Constitution...

It is NOT necessary for anyone to be "licensed" in a
particular radio service in order to Comment to the
FCC about that radio service.

U.S. amateur radio is not a "club" where all the rules
and by-laws are set (and apparently kept forever) SOLELY
by the club members. Tsk, tsk, tsk.

>> > >Jim, you're unlikely to be able to reason out how an arbitrary
>> > >licensing requirement will manifest itself. That is the beauty
of
>> > >arbitrary requirements.
>> >
>> > Brian, he just CANNOT change his mind.
>
>Can't be talking about me. I have changed my mind on many things.

Tsk. Jimmie the Who can't seem to change his mind
about DROPPING this so-called "controvrsy" over an
age requirement I made as a SUGGESTION six years ago!

However, Jimmie the Who hasn't presented any definitive
details of those things he "changed his mind" about.

>> It isn't a molehill, Leonard. You did write to the FCC in support
of a
>> minimum age for entry into amateur radio. There is no indication
that
>> you ever changed your mind on that subject. There as been no
disavowal
>> from you.
>>
>Nor any evidence of problems caused by lack of an age limit, nor
>evidence of dishonesty by the VEs who gave the license exams to those
>six-year-olds.

Tsk, Tsk, TSK! There is NO "requirement" to "disavow" anything
written to the FCC at any time on any subject!

This isn't a "federal case" up before any court, sweetums.
You are dwelling on the subject wayyyyy too long for your
own mental health.

On "disavowals:" Move your vowels every day to avoid getting
consonated...

>Len's "logic" boils down to this:

No, no, no...Jimmie the Who's ATTEMPT TO DENIGRATE AND DEFAME
someone "boils down to this," a collection of mistruths and
usual PCTA extra bullshit where they try attacking someone
who doesn't think like they do...

>- He thinks there's no way a six year old could pass the tests
>honestly. Never mind that he doesn't know the six-year-olds in
>question, nor has he ever passed any amateur exam, he simply KNOWS
>there must be "fraud" involved.

Jimmie the Who is a TERRIBLE mind-reader! FAILURE!

Jimmie the Who needs a psychiatric work-up since he can't
understand the difference between OPINIONS and FACT...nor
that OTHERS CAN HAVE EQUALLY-VALID *OPINIONS* that aren't
HIS.

>- He thinks that even though there hasn't been an age requirement for
a
>US ham license since the very beginning of such licensing 93 years
ago,
>such a requirement MUST be added to the rules - even though he can
>present not a single case of a problem or enforcement action caused by
>the lack of such a requirement.

Jimmie the Who needs a TRANQUILIZER or some such thing.
Clearly, he CANNOT take an opposite opinions to his with
his continuous resorts to personal retorts in a public
access newsgroup! :-)

Jimmie the Who must think of this as his personal blog
or something, that NO ONE can possibly have an OPINION
other than HIS righteous one. Tsk. All who think
differently are WRONG and MUST BE PUNISHED! :-)

>I really do think he's jealous.

Jimmie doesn't have his head screwed on properly! :-)

DROP this "age requirement case," Jimmie. I did. It won't
go away unless you or some other PCTA extras stop bringing
it up.

Don't waste so much bandwidth in here with your mewling
about OTHERS "doing wrong" because they have OPINIONS
differing from yours. Tsk, tsk, tsk.

Quit acting like a cute six year old who just got her
ham license and picture on the ARRL website. :-)

BTW, sorry you didn't get that "cool" womsn's tee on
Ebay. Better luck next time.

FROM N9OGL Blog:

The N9OGL SHOW
N9OGL is planning to put his radio program on 2 meters and increase the hours. It was announced today that N9OGL was going to put his radio program on 2 meters and increase the programming from 1 hour to 5 hours a day. This will begin sometime in May or June of this year. More will be posted later.

MSYS, and FBB are good programs...old, but good, however, compared to
today software, they are outdated, and not USER FRIENDLY.

> for example) and by what means will the encryption be accomplished?

There is a lot of P2P software that is out there that is "Open Source"
Software, meaning you can downloaded a uncompiled version and program
it the way you want. So you can create filters so certain files can't
go through the system like MPEGS, and AVI files (movie files) or MP3
(Music files) I would suggest if you intrested in it to get some books
on P2P. The network would be set up like this: a Users lets say K4YZ
clicks on a icon of the P2P SOFWARE lets say it's called AMP2PNet, the
software would connect him to the network via a radio node. The P2P
nodes on the internet would be set up with either IP address or "web
address" (like what echolink has) and these would only be known to the
program and the system operator. Only amateur would only be able to
connect to this network via radio, all of the "Super Nodes" which are
on the web would be encrypted. So in other words if you wanted to uses
the system you would have to get on packet. The software would only be
handed out to amateurs and would have a callsign varifcation system.
also logging into the network you would be using your callsign to log
in (this again is only allowed over the radio)

>
> I know a bit about this area, and can unequivocally say thay security

> in such a system would not be trivial. Nor would the potential for

> directly be reached through the Internet. Choose your operating
system
> (platform) unwisely and the headaches become even bigger.

Like I stated above the only way you could log into this system would be over radio. The Super nodes which are on the internet are encrypted and the internet side is mainly a "user Backbone system" so users can connect via 2 meter---over the internet-----to another user on the radio.

It's an idea i'm working on.....I right now working on the software,
but my skills in C++ / Java Script isn't very good so I'm going to
school to learn. but anyone who wishes to come up with some software
before me can do so.....and Oh, You have to have Idea before you come
up with an invention.....or perhaps they did teach you that down south.

>And who the heck WANTS a "bottlenecked" communications
>gateway...?!?!

It really don't have to be "bottlenecked" I know that there is some
WI-FI systems that are out there that run in our ham bands that
transmit wireless data as high as 10Mb so it can be "bottlenecked" on 2
meters or not "bottlenecked" at those higher frequencies.

There's no raving here, Leonard.

I demand that you cite those raves.

There is no "white man's club" here. No one, except for felons and representitives are prevented from obtaining an Amateur Radio license...Even lying ex radio technicians in Sun Valley.

> Davie Heil will NOT address the de facto WHITE MEN'S
> CLUB other than to misdirect into personal denigration

> NO "oaths," "vows," or promises.

All references to any statements he has made are rebutted with "tsk", "I never said THAT", "that was in the past" or similar disavowal of his own "word".

Then when his lies are pointed out, he tries to redirect "to the subject" or other such misdirection, claiming that he is the victim of "character assassination".

> Doesn't matter on the SUBJECT whether or not I "get"
> a ham license. Big badass davie IS going to find some
> sort of personal denigration "charge" to misdirect the
> thread SUBJECT onto my person's alleged "faults."

There is nothing "alleged" about it.

Leonard H. Anderson of Sun Valley California is a pathological liar. He is untrustworthy. His word is only taken with one huge grain of salt by the extremely gullible.

> Davie Heil has been trying to toss me off this news-
> group for over seven years on all sorts of specious
> "charges." Tsk. He's FAILED! I'm still here. Poor

Actually, I saw a tee shirt that kinda fits the situation, Lennie, so you may be getting a package via UPS very soon. It says:

"I AM PROOF THAT THE THREAT OF CAPITAL PUNISHMENT DOES DETER
CAPITAL CRIME" It has a "stickman" in a hangman's noose and the
international red circle with the strike across it.

> Failure is NOT an option, Davie.
>
> TRY to get back ON the SUBJECT...WITHOUT resorting to
> all the alleged "faults" of another person. I don't
> think you can do it.

You ARE a liar.

You HAVE made countless inappropriate and innaccurate statements
about Amateur Radio and Amateur Radio Operators. When those errors
have been brought to your attention (or proof asked for) you've refused
to acknowledge your error.

YOU contantly denigrate almost everyone here with allegations of
Nazi sympathies, profanities and other such childish name-calling, then
cry foul when redirected back to you.

You've bottomed out, Lennie...Whatever potential you had at being
of any value to community or avocation is long gone.

Back under the rock, scumbag.

Putz.

here's a respond from me to you on my website:

K4YZ: "down our collective throats via a medium that wasn't intended
for it (Amateur Radio)."

Collective throats??? what is this a Communist country, I think not! I
think you and your little commie buddies need to read some books on
indvidualism or go back to China or some other communist country.

K4YZ: "Blab your "bulletins" all you want via this blog or via Internet
outlets, but your "informational bulletins" on the 20 meter Amateur
band are just pirate broadcasts."

yo ho ho ho A PRIATE LIFE FOR ME!!!!

K4YZ: It may not happen tomorrow, or even the week after, however
sooner or later the FCC >>WILL<< be at your door, and your troubles
will have multiplied.

Doubtful, at any rate I'll fight them over it, including violating my
first amendment right, and violating the content control restrictions.
I'll fight it all the way to the Supreme Court if I have to.

K4YZ: "And we'll be laughing our collective butts off at you!"

OH STEVE, it's nice that you share butts with your friends on
rec.radio.amateur.policy

9:46 PM

Well?
> Or is it really true what they say about you being brain dead?

You can never expect the mentally frail and weak-of-mind to really
do what they demand of others.

"Lloyd" and "Psychiatrist" were answered. Guess they didn't like
it. Of course when challenged to post the cites they claim I made,
THEY didn't do it. Of course it's hard to present the non-existant.
In short: They lied. (This is new...?!?!)

But that was pretty much what I expected. Lame.
